CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-KSB includes forward-looking statements. All statements other than statements of historical facts contained in this Annual Report, including statements of our expectations regarding research and development, revenues, selling, general and administrative expenses, profitability, financial position, business strategy and plans and objectives of management for future operations, are forward-looking statements. The words believe, may, will, estimate, continue, anticipate, intend, expect and similar expressions, as they relate to us, to identify forward-looking statements. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. These forward-looking statements are subject to a number of risks, uncertainties and assumptions described in Risk Factors and elsewhere in this Annual Report, including, among other things: the success of the Mount Hope Project, including delays in development; raising sufficient capital to fund our operations; fluctuations in the market price of molybdenum and other metals; demand for molybdenum; obtaining regulatory approvals; inaccuracies in mineralization, reserve and/or production estimates; mining hazards; environmental liabilities; challenges to legal title of any of our properties; governmental land reclamation of our properties; non-compliance with our Mount Hope lease; loss of key personnel or inability to attract skilled personnel; increased operating costs; and shortages of critical parts, equipment or skilled labor.

New risk factors emerge from time to time and it is not possible for our management to predict all risk factors, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements. You are urged to consider these factors carefully in evaluating the forward-looking statements herein and are cautioned not to place undue reliance on such forward-looking statements, which are qualified in their entirety by this cautionary statement. We assume no obligation to update any forward-looking statements after the date of this prospectus as a result of new information, future events or developments, except as required by federal securities laws.

PART I

ITEMS 1 & 2. DESCRIPTION OF BUSINESS AND PROPERTIES

References made in this Annual Report on Form 10-KSB to we, our, us, our company and IGMI refer to Idaho General Mines, Inc.

Many of the terms used in our industry are technical in nature. We have included a glossary towards the end of this Annual Report on Form 10-KSB that explains other technical terms we use in this Annual Report on Form 10-KSB.

The mineralization and economic estimates of our 53-year mining plan included in this Annual Report on Form 10-KSB are reported in summary form in our report entitled Phase 2 Mine Feasibility Study - Mount Hope Project dated December 2005, which is also referred to within this Annual Report on Form 10-KSB as the **Technical Report**, which was prepared by and under the supervision of Mr. John M. Marek, an employee of Independent Mining Consultants, Inc. (**IMC**) of Tucson, AZ. Portions of the information in this Annual Report on Form 10-KSB are based on assumptions, qualifications and procedures which are set out in summary form in the Technical Report.

References made in this Annual Report on Form 10-KSB to the **Feasibility Study** refer to both our Phase 1 Mine Feasibility Study for the Mount Hope Project prepared by IMC, the results of which were first reported in a press release on April 25, 2005, and the above-referenced Technical Report, the results of which were first reported in a press release dated October 14, 2005.

For ease of reference, the following conversion factors are provided:

Imperial Measure	Metric Unit	Imperial Measure	Metric Unit
1 acre	= 0.4047 hectare	1 mile	= 1.6093 kilometers
1 foot	= 0.3048 meter	1 troy ounce	= 31.1035 grams
1 gram per metric tonne	= 0.0292 troy ounce/ short ton	1 square mile	= 2.59 square kilometers
1 short ton (2,000 pounds)	= 0.9072 tonne	1 hectare	= 100 square kilometers
1 tonne	= 1,000 kg or 2,204.6 pounds (lbs)	1 acre	= 2.471 hectares
1 hectare	= 10,000 square meters		

Overview

We are an Idaho corporation under the Idaho Business Corporation Act (the **IBCA**) originally incorporated under the name General Mines Corporation on November 23, 1925. In 1966, we amended our articles of incorporation to change our name to Idaho General Petroleum and Mines Corporation, and amended our articles again in 1967 changing our name to Idaho General Mines, Inc. Our registered and executive office is located at 10 North Post Street, Suite 610, Spokane, Washington, United States 99201. We hold all our properties and assets directly and have no operating subsidiaries. The Hall Tonopah royalty and environmental liabilities were purchased under existing legal entities and will be retained as wholly owned subsidiaries Net Smelter, Inc., Moly Royalty, Inc. and Copper Royalty, Inc.

We are in the business of the exploration, development and, if warranted, the mining of properties containing molybdenum, as well as silver, gold, base metals and other specialty metals. We currently have a 30-year renewable lease for the lands related to, possess surface rights for, and own patented and unpatented claims to, the Mount Hope Project, a primary molybdenum property, located in Eureka County, Nevada. In 2006, we acquired a second significant molybdenum project, the Hall-Tonopah project, located in Nye County, Nevada. We also own other properties and mineral rights on which we intend to conduct mineral exploration and evaluation for determining economic viability for further development. We continue to identify, investigate, and acquire other potential properties for future development.

Edgar Filing: IDAHO GENERAL MINES INC - Form 10KSB

Prior to 2004, we had not conducted mineral exploration for a number of years and were dormant except for occasional timber harvesting. In 2004, due to increased prices for gold, silver and other metals and a more favorable climate for financing mineral exploration companies, our board of directors decided to engage in assessing the availability of advanced-stage mineral properties.

On July 26, 2004, our Registration Statement on Form 10-SB filed with the SEC was declared effective and our common stock began being quoted on the OTC Bulletin Board under the symbol **IGMI**.

On November 12, 2004, we entered into an option agreement with Mount Hope Mines, Inc., or MHMI. Pursuant to the terms of this agreement, we were granted an exclusive one-year option to lease Mount Hope's previously drilled molybdenum deposit consisting of 13 patented claims and 109 unpatented claims in Eureka County, Nevada, for a lease period of 30 years. See **Business Description of the Mount Hope Project Acquisition**.

On April 25, 2005, we completed a Phase I Mine Feasibility Study with respect to Mount Hope and began the permitting process for placing into production an open pit molybdenum mine, concentrator and processing facility capable of producing 40,000 tonnes (44,093 tons) of ore per day. On October 19, 2005, we exercised the option in regard to the Mount Hope Project and our lease agreement with MHMI (the **Mount Hope Lease**) became effective. See **Business Description of the Mount Hope Project The Mount Hope Lease**.

On June 30, 2005, we entered into an option to purchase a ranch and associated water rights from Art and Frances Gale of Eureka, Nevada (the **Gale Ranch Option**). The Gale Ranch Option gave us the right, for two years, to purchase the Gale Ranch for \$1,800,000, which includes 1,503 acres of deeded land adjacent to the Mount Hope property, 70,000 acres of U.S. Department of the Interior Bureau of Land Management (**BLM**) grazing rights (which overlap the Mount Hope property), and certain ground water and stock water rights associated with the grazing land and the deeded land. The Gale Ranch Option independently gave us the right, for two years, to purchase for \$50,000 approximately 1,200 acre-feet of ground water per annum associated with the deeded land within the Gale Ranch. Consideration paid for the Gale Ranch Option included \$152,000 and 30,000 shares of our common stock. We completed the Gale Ranch purchase on July 19, 2006 and at the same time entered into a 1 year lease of the Gale Ranch to Art and Frances Gale.

In December 2005, we completed the Technical Report which evaluated the potential to profitably extract the deeper portion of the Mount Hope deposit and augmented the mine plan contained in the 2005 Phase I Mine Feasibility Study. The augmented mine plan currently allows for the mining and processing of 920 million tonnes (1.0 billion tons) of molybdenum over a mine production life of 50 or more years. For further details, see **Business Description of the Mount Hope Project**.

On March 17, 2006, we entered into a purchase agreement with High Desert Winds LLC (**High Desert**) whereby we purchased High Desert's approximately ten square mile property in Nye County, Nevada, including water rights, mineral and surface rights, buildings and certain equipment, pursuant to an option granted to us in February 2005. The property includes the former Hall molybdenum and copper deposit which was mined by open pit methods between 1982 and 1985 by the Anaconda Minerals Company and between 1988 and 1991 by Cyprus for molybdenum. Equatorial Tonopah, Inc. mined copper from 1999 to 2000 on this property. Much of the deposit was drilled but not developed or mined. At closing, we paid High Desert a cash payment of \$4.5 million for a portion of the property, and in November 2006, made an additional payment of \$989,789 for the remainder of the property.

In August 2006, our common stock began trading on the American Stock Exchange.

On January 30, 2007, we purchased 100% of the Stock in Equatorial Mining North America, Inc. and its two subsidiaries, which owned a 12% net smelter returns royalty on the Hall-Tonopah property, from

Equatorial Mining Pty. Limited. The consideration paid for the Equatorial acquisition was \$4.85 million with an additional deferred payment of \$6 million due upon commercial operation of the property. The acquisition included the royalty as well as \$1.24 million in cash accounts and the assumption of all environmental liabilities on the reclaimed site.

We are currently in the process of developing a new bankable feasibility study with respect to the Mount Hope Project, which is scheduled to be completed by July 2007. The bankable feasibility study will include optimized mine and waste rock placement plans as well as revised estimates for capital and operating costs in light of industry wide increases in input commodity, labor and construction costs over the last two years. See Description of Mount Hope Project Project Feasibility.

Corporate Strategy and Objective

Our corporate strategy is to acquire and develop highly profitable advanced stage mineral deposits. Our near-term corporate objective is to profitably develop and operate the Mount Hope and Hall Tonopah Projects.

We believe we have the following business strengths which will enable us to achieve our objectives:

- A strong, proven management team with experience in exploration, mine development and operations.
- Our Mount Hope project, currently in the permitting and bankable feasibility stage, has high grades in the early years of production and is anticipated to be one of largest and lowest cost primary molybdenum producers in the world.
- Current drilling at our second molybdenum project, Hall Tonopah, indicates the potential for significant expansion of the original 150 million tonnes (165 million tons) of mineralization estimated by former owner Cyprus Amax.
- Mount Hope and Hall-Tonopah are located in Nevada, which is geopolitically safe and has a long and ongoing history of large-scale, open pit mining operations.
- Strong molybdenum supply and demand market fundamentals.

Products

We do not currently produce any products. We are in the process of developing the Mount Hope molybdenum project. When in production, we expect Mount Hope to produce an average of approximately 30 to 35 million pounds of molybdenum per year over the first five years of production and approximately 1.2 billion pounds of molybdenum over the 50+ year life of the project. Mount Hope will primarily focus on producing Technical Grade Molybdenum Oxide (**TMO**) because generally downstream processing begins with TMO. TMO is the most widely marketed molybdenum product.

Molybdenum is a primary alloying agent in steel and stainless steel products, including construction steel, stainless steel, oil and gas pipelines and tool steel. Molybdenum enhances steel strength and corrosion resistance. Other uses include fuel desulfurization catalysts, lubricants and alloy element in gas turbine engine components. Molybdenum has few substitutes.

The steel industry is a primary consumer of molybdenum and will be the primary market target for Mount Hope TMO. We will also consider the production of higher grade products suitable for use as catalysts in petroleum and other energy products.

The supply of Molybdenum comes from both primary molybdenum mines, such as our proposed Mount Hope project and as a byproduct of porphyry copper production.

Description of the Mount Hope Project

Overview

We are proceeding with the permitting and development of the Mount Hope Project. The project will include the development of an open pit mine, construction of a concentrator plant, construction of a roaster plant, and construction of all related infrastructure to produce Technical Grade Molybdenum Oxide (TMO), the most widely marketed molybdenum product. We completed a preliminary mine feasibility study in April 2005 primarily based on Exxon data for the purpose of evaluating the value in exercising the long term option to lease the Mount Hope Project. This study provided a study of the economics and capital cost estimates for development of the project and developed a preliminary mine plan. Based on the results of the feasibility study, we exercised our option to lease in October 2005 and entered into the Mount Hope Lease with MHMI. Subsequently, we accomplished a detailed mine feasibility study in December 2005 which verified existing drill hole data and refined the block model and mine plan. In 2006, we initiated the baseline studies necessary for development of an EIS. We completed a Plan of Operations which was accepted by the Battle Mountain office of the Bureau of Land Management in September, 2006. In December 2006, the BLM selected an environmental firm to complete the EIS for the Mount Hope project. Various environmental data and study tasks are ongoing in connection with the permitting process. The current BLM and contractor schedule demonstrates a Record of Decision in November of 2008. In January 2007, we selected a contractor to accomplish a bankable feasibility study for the project. This study is contracted to be complete by mid 2007. Based on the current estimated timelines for permitting, construction and long-lead equipment, we are targeting initial production at Mount Hope in 2010.

The Mount Hope Lease

We currently have a 30-year renewable lease for the Mount Hope Project. Located in Eureka County, Nevada, the Mount Hope Project consists of 13 patented claims, one millsite claim, and 1,374 unpatented claims, of which 109 unpatented claims are owned by MHMI and 1,265 unpatented claims are owned by IGMI. Although there are no current plans to stake additional claims, it is possible that we could be required to stake additional claims as part of the permitting of Mount Hope. The Technical Report contains a current claim map of the property.

The 30-year term of the Mount Hope Lease is subject to the payment of certain royalties. See Business Description of the Mount Hope Project Royalties, Agreement and Encumbrances below. In addition to the royalty payments, we are obliged to maintain the property and its associated water rights, including the payment of all property taxes and claim maintenance fees. We must also indemnify MHMI against any and all losses incurred as a result of any breach or failure by us to satisfy any of the terms of the Mount Hope Lease or any activities or operations on the Mount Hope property.

We are not permitted to assign or otherwise convey our obligations under the Mount Hope Lease to a third party without the prior written consent of MHMI, which consent may be withheld in its sole discretion. However, if the assignment takes the form of a pledge of our interest in the Mount Hope property for the purpose of obtaining financing for the Mount Hope Project, MHMI's consent may not be unreasonably withheld. The Mount Hope Lease further provides that we are to keep the property free and clear of all liens, encumbrances, claims, charges and burdens on production, including if and when we obtain project financing.

With respect to project financing, the Mount Hope Lease provides that the terms of such financing must stipulate that: (i) any principal amount of debt can only be repaid after we have paid all of the periodic payments as set out in the Mount Hope Lease; (ii) the lenders may not prohibit or interfere with any advance royalty payments due to MHMI under the Mount Hope Lease; and (iii) no cash sweeps or payments of excess cash flow may be made to the lenders in priority of such advance royalty payments.

The Mount Hope Lease also contains an after acquired property clause, which provides that any property acquired by us within two miles of the boundary of the Mount Hope property must be conveyed to MHMI if requested within a certain time period following notification of such acquisition. MHMI has requested that we at this time maintain ownership of all new claims filed by IGMI. This now includes 1,374 unpatented mineral claims.

The Mount Hope Lease may be terminated upon the expiration of its 30-year term, earlier at our election, or upon our material breach and failure to cure such breach. If we terminate the lease, termination is effective 30 days after receipt by MHMI of our written notice to terminate the Mount Hope Lease. If MHMI terminates the lease, termination is effective upon our receipt of a notice of termination if we materially breach a representation, warranty, covenant or term contained in the Mount Hope Lease and then fail to cure such breach within 90 days of receipt of a notice of default. MHMI may also elect to terminate the Mount Hope Lease if we have not cured the non-payment of our obligations under such lease within 10 days of receipt by us of a notice of default. We may continue the lease beyond 30 years if we are in production or intend to resume production and have provided notice accordingly.

Property Description and Location

The Mount Hope Project is located on the eastern flank of Mount Hope approximately 35 km north of Eureka, Nevada, United States. The Mount Hope Project is located at the southern end of the northwest-trending Battle Mountain-Eureka mineral belt. Mount Hope is approximately 3.7 km due west of State Route 278, and the Mount Hope Project centers in sections 1 and 12, T22N-R51E and sections 12 and 13, T22N-R51½E.

Nature and Extent of Company's Title

The land package for the Mount Hope Project contains 13 patented lode claims, one patented mill site, and 1,374 unpatented lode claims. The total surface area covered by the Mount Hope Project land package is 7,311 hectares. MHMI owns all of the patented claims and 109 of the unpatented lode claims. These claims are the subject of the Mount Hope Lease. We own the remaining 1,265 unpatented lode claims. The patented claims and unpatented claims comprising the Mount Hope Project are listed by number and ownership in the Technical Report. Patented claims are owned real property and unpatented claims remain valid for as long as the holder pays the applicable fees.

Royalties, Agreements and Encumbrances

Under the Mount Hope Lease, we have the following royalty and other payment obligations:

Periodic Payments

1. We are required to pay MHMI a total of \$850,000 in set cash payments under the Mount Hope Lease. We paid the first installment of \$125,000 installment payments due on January 31, 2006 and a second and third installment of \$125,000 on April 19, 2006 and October 19, 2006, respectively. We are obligated to make a fourth payment of \$125,000 on April 19, 2007, and a final \$350,000 installment payment on October 19, 2007.
2. We are required to pay MHMI the greater of \$2,500,000 or 3% of the construction capital cost estimate for the Mount Hope Project calculated in accordance with the Mount Hope Lease. The timing of this payment depends on whether we will be able to secure Project Financing before October 19, 2010. Project Financing means the securing of funds dedicated to the development of the Mount Hope Project in accordance with the mechanism set out in the Mount Hope Lease to put the Mount Hope Project into commercial production. If we are able to secure Project Financing on terms that are satisfactory to us, we will be required to make this payment to MHMI on or before October 19, 2008. If we are unable to secure Project Financing on terms that are satisfactory to us by October 19, 2008, we may elect to defer this payment until we obtain Project Financing or until October 19, 2010, whichever is earlier by paying the greater of \$350,000 or 3% of the construction capital cost estimate for each year of deferral.
3. If we defer the \$2,500,000 or 3% of the construction capital payment until October 19, 2010 as described in (2) above, we must elect to either make the deferred payment of \$2,500,000 or, if 3% of the construction capital estimate is greater than \$2,500,000, then we pay 50% of the difference between 3% and \$2,500,000 on each of October 19, 2011 and October 19, 2012.

Advance Royalty

On the anniversary of the effective date after we secure Project Financing or at the very latest on October 19, 2013, we must begin paying yearly advance royalty payments of \$500,000 per year to MHMI.

Production Royalty

Following commencement of commercial production, we will be required to pay a production royalty to MHMI and Exxon Corporation (**Exxon**), as follows:

(a) MHMI Production Royalty

After commencement of commercial production at the Mount Hope Project, we will be required to pay to MHMI a production royalty equal to the greater of: (i) \$0.20 per pound of molybdenum metal (or the equivalent of some other product) sold or deemed to be sold from the Mount Hope Project; or (ii) 3% of net returns (the **Base Percentage**), if the average gross value of products

sold is equal or lower than \$12.00 per pound, or the Base Percentage plus 1% of net returns if the average gross value of products sold is higher than \$12.00 per pound but equal or lower than \$15.00 per pound, or the Base Percentage plus 2% of net returns if the average gross value of products sold is higher than \$15.00 per pound. As used in this paragraph, the term *products* refers to ores, concentrates, minerals or other material removed and sold (or deemed to be sold) from the Mount Hope Project; the term *gross value* refers generally to proceeds received by us or our affiliates for the products sold (or deemed to be sold); and the term *net returns* refers to the gross value of all products, less certain direct out of pocket costs, charges and expenses actually paid or incurred by us in producing the products.

(b) Exxon Production Royalty

Exxon will receive a perpetual 1% royalty interest in and to all ores, metals, minerals and metallic substances mineable or recoverable from the Mount Hope Project, equal to 1% of total amount of gross payments received by us from the purchaser of ores mined/removed/sold from property less: (i) deductions made by the purchaser for sampling, assays attributable to Exxon's 1% interest; (ii) cost of freight, transportation and haulage to and for the purchaser away from the mill, smelter, roaster or other refining facility operated by or for us attributable to Exxon's 1% interest; and (iii) any taxes attributable to Exxon's 1% interest. This royalty applies to any and all after-acquired title including mining claims staked or obtained within the bounds of the Mount Hope Project (and more particularly described in the Technical Report). The royalty must be paid within 60 days after each month of production and Exxon is permitted to enter the property to take delivery of royalty concentrates or refined products, and examine or audit the operations and books. Exxon is required to pay one-third of the reasonable direct cost of the minimum annual assessment work required to maintain the unpatented mining claims remaining subject to the royalty payment not to exceed \$13,300 and Exxon has the right to eliminate this obligation per claim by quitclaiming royalty payment to that particular claim.

There are no encumbrances to the Mount Hope property with the exception that we are obligated to provide certain minimal environmental mitigation of surface waste and old equipment which may cost an estimated total of \$50,000 to remediate. There is no time limit on accomplishing this work except as may be potentially agreed with the Nevada regulators.

Environmental Regulations and Permits

Our projects are subject to numerous state and federal environmental regulations and permitting processes. See *Applicable Mining Laws* and *Permitting* below for a detailed description of these requirements.

Accessibility, Climate, Local Resources, Infrastructure and Physiography

Access

The Mount Hope Project has year-round access from Nevada State Route 278. The land package includes the land between the project site and State Route 278.

Climate

Climatic conditions in the site area vary significantly with cold air temperatures in the winter months (December through February), and hot and dry conditions in the summer months (June through September). During the winter months, average temperatures range from -2.3 to -0.8°C and in the summer months, from 15.1 to 20.6°C. Average monthly precipitation data recorded from the Eureka meteorological station ranges between 13 and 35 mm. Generally, the wettest month is May and the driest month is July. The average annual precipitation is 311 mm. Operations at the site are planned to continue year-round.

Local Resources and Infrastructure

The town of Eureka, Nevada, approximately 21 miles to the south, will provide the primary support for the Mount Hope Project. Local to the Mount Hope Project, the infrastructure requirements to support the mine and concentrator consist of bringing nearby power to the property, developing a water well field within the adjacent Kobeh Valley area, site access roads, and constructing maintenance shops for the mine and plant administrative offices.

Surface Rights

Surface rights on the Mount Hope property include BLM open range grazing rights and stock water rights. To date, approximately 80% of the grazing and stock water rights which overlap the Mount Hope property have been secured by way of the Gale Ranch purchase. See General Development of the Business Overview. We are currently negotiating for the remaining 20% and expect to complete those transactions in 2007.

Two power line easements cross within the property boundaries. A 345 kV transmission line operated by Sierra Pacific Power runs north-south on the western edge of the property and the other easement is a non-operating, medium-voltage power line that runs from the old mill facilities east along State Route 278 to the eastern property boundary.

Physiography

The Mount Hope area lies within an area of north-south trending mountains separated by alluvial valleys. The primary mountain ranges in the Mount Hope area include the Roberts Mountains, Sulphur Spring Range, Diamond Mountains, Simpson Park Range and the Cortez Mountains. Elevations of the mountains range from over 3,050 meters (10,000 feet) for the Roberts Mountains to approximately 2,070 meters (6,800 feet) for the crests of the Sulphur Spring range.

The major valleys in the Mount Hope region are Diamond Valley to the east of Mount Hope, Garden Valley to the north of Mount Hope, and Kobeh Valley to the west. Diamond and Garden Valleys are elongated in a north-south direction. Kobeh Valley is roughly equidimensional in form.

The upper portions of the valleys are similar in nature and are characterized by slightly incised stream channels with no significant associated floodplain. The uplands and mountains have slopes ranging from moderate to steep (over 30 percent) with shallow to deep, moderately alkaline to medium acidic soils. Bedrock is often within 0.5 meters of the surface, particularly on the steep upland slopes.

Lake sediments make up the largest areas in the valleys. The slopes range from smooth to rolling (0 to 15 percent), and the soils vary from shallow to deep and mildly to strongly alkaline. The surface textures range from silty clay loams to gravelly sandy loams and local sand. The permeability of these soils ranges from slow to rapid.

The natural vegetation of the region consists of pinion juniper and sagebrush with grass. The pinion juniper occupies the higher elevations of the mountain slopes, with the lower areas in the valley covered predominantly with sagebrush and shrubs with perennial bunchgrasses.

Mount Hope, located in the lower foothills of the southeast flank of the Roberts Mountains, stands approximately 2,440 meters (8,000 feet) in elevation. Areas to the east and south east slope gently to elevations from 1,950 to 2,410 meters (6,400 to 7,900 feet). Diamond Valley, situated to the south and east of Mount Hope, is approximately 1,660 meters (5,450 feet) in elevation.

History

Prior Ownership and Results of Exploration Work Ownership

Lead-zinc ores were discovered at Mount Hope in 1870, and small scale mining carried out sporadically until the 1970s. Zinc and adjacent copper mineralization were the focus of drilling activities by Phillips Petroleum in the early 1970s and by ASARCO and Gulf (**ASARCO**) in the mid-1970s which outlined further zinc mineralization. The last drill hole of this series encountered significant molybdenum mineralization at depth west of the zinc deposits. The significance of this mineralization was first recognized by ASARCO in 1976, but ASARCO was apparently unable to reach an agreement with MHMI to test this potential.

Exxon recognized molybdenum potential at Mount Hope in 1978 and acquired an option on the property from MHMI. By 1982, Exxon had completed 69 holes, which partially defined a major molybdenum deposit underlying the east flank of the Mount Hope property. Exxon conducted a +/-25% feasibility study of the Mount Hope prospect in 1982. The Exxon study focused on an ore production rate of 27,500 tpd starting in 1985. In December of 1983, Exxon completed an optimization study, which generally involved a reduced capital and operating cost estimate based on more aggressive project parameters. An extensive environmental database of multiple assessments by consultants formed the basis of the environmental assessment and was utilized in the Exxon permitting process for their intended BLM land exchange. The Exxon feasibility study calculated a sizable molybdenum deposit. A draft EIS was completed on the project, and public hearings were held in early 1985. Exxon drilled an additional 60 holes on the property between 1983 and 1988 but did not update their deposit block model with data from the post 1982 holes. Cyprus Metals Company (**Cyprus**) drilled four holes on the property in 1989-90 under an agreement with Exxon but apparently did not pursue the project.

Kennecott (**Kennecott**) executed an agreement in 1995, which allowed them to study the prospect and, if desired, execute a purchase by April 30, 1996. Kennecott reviewed the property and data, but did not drill any new holes. Kennecott conducted the economic evaluations but did not exercise the option on the property. The property rights remained with MHMI after the Exxon and Kennecott efforts.

We established an agreement with MHMI in 2004 as outlined in *Business Description of the Mount Hope Project Acquisition* . We obtained access to previous work completed by previous parties including drill core and drill data, which we used as the basis for developing a feasibility evaluation of the Mount Hope deposit. The feasibility study conducted by seven consulting groups acting in consortium provided the basic engineering, plant design and other aspects of analysis of the Mount Hope Project. The feasibility study outlined a positive operating process, waste disposal, mine design and plan, environmental, permitting plan, operating and capital cost estimates, and other inputs to a significant feasibility study and the corresponding estimates of mineralized material reported in the Technical Report.

Geology

Central Nevada represents a band of north-south trending mountain ranges and is made up of rock units characterized into three groups: (1) Western Assemblage rocks made up of carbonaceous shale, mudstone, chert, and volcanic rocks; (2) Eastern Assemblage rocks consisting of thick rock sequences of carbonate rocks; and (3) overlap assemblages of mixed carbonate and coarse to fine siliciclastic rocks.

The Western Assemblage were thrust faulted eastward over the Eastern Assemblage sequence. This area of thrusting is known as the Roberts Mountain Thrust Zone. Materials shed off the fore front of the thrust sheet formed the overlap assemblage. Mount Hope is located on the leading edge of this zone on the west side of the overlap group of rocks.

The Mount Hope deposit is located on the eastern edge of a mineral belt linking deposits of diverse ages along a northwest-southeast trending line. The Battle Mountain-Eureka mineral belt, 240 miles long,

has served to localize intrusive and mineralizing activity and has resulted in major deposits of gold, silver, copper, and molybdenum.

The Mount Hope deposit is centered in an elevated area of igneous rock exposure 1.6 by 2 km (1 by 1.2 miles) in size. The complex contains extrusive igneous rocks derived from a common volcanic source.

Quartz porphyry, the principal molybdenum host rock, is commonly veined with quartz in the deposit area, and a quartz vein stockwork is well developed in the subsurface. The molybdenum deposit occurs as two dome shaped intrusions or stocks about 457 meters (1,500 feet) in diameter, the tops of which approach but do not reach the surface. These stocks are important centers of molybdenum mineralization. The mineralization, which is symmetrical about the overlapping domes, is differentiated into separate western and eastern mineral systems.

The Mount Hope deposit is a molybdenum porphyry, is classified as a low fluorine, sub-Climax type deposit. This type of deposit has well zoned molybdenum mineralization. The molybdenum mineral content, termed grade zoning, surrounds the central area of the deposit and forms geometries that are circular in plan and arch (inverted bowl) shaped in section. This feature of mineral grade zoning is illustrated in the cross sectional areas delineated in red below.

The mineral zones or shells consist of quartz porphyry cross-cut by quartz stockwork veining containing molybdenite. The higher grade shells are near the surface.

Mineralization

The main form of molybdenum mineralization is molybdenite (molybdenum disulfide) and occurs within the intrusive Quartz Porphyry rocks of the Mount Hope complex and to a lesser extent in the Vinini sedimentary formation adjacent to the southern margin of the mineralized domes. Much of the known molybdenite is distributed around two mineralized systems consisting of two dome shaped zones of mineralized stockworks. The top of the mineral system has, however, been sliced off with little ore remaining above the Mount Hope fault shown above.

A concentration of higher grade mineralization, averaging approximately 0.15% molybdenum, is present between the eastern and western mineral systems. Referred to as the overlap zone, this zone is roughly 366 meters (1,200 feet) in diameter and varies from 91 to 274 meters (300 to 900 feet) deep. The top is 91 meters (300 feet) below the ground surface. This zone is the nucleus of the open pit mineralization to be mined in the first 20 years with lower grade mineralization being mined in the succeeding 30 years.

Exploration

Since acquiring access to the property, we have completed additional exploration drilling for molybdenum and have initiated the next stage of development drilling at Mount Hope. During the first and second quarter of 2007 we are completing additional drilling for the purposes of obtaining engineering information for items such as geotechnical design, hydrology, and condemnation for waste dumps and tailings ponds as well as infill drilling for ore calculation purposes.

Drilling

Mount Hope has been extensively drilled and all core and assay results are available. Accordingly IGMI has been able to analyze and quantify the mineral resource based on an extensive high quality database.

The drilling at Mount Hope has been predominately performed by utilizing diamond core methods, although two reverse circulation (**RC**) rotary holes were drilled by Cyprus during 1989, and 31 RC holes for waste and tailing site condemnation were drilled by Exxon (within the 31 Exxon RC holes, there were only four assay intervals above the cutoff grade applied in the calculation of the mineralized material described in this Annual Report on Form 10-KSB).

The majority of the Exxon holes are NQ and HQ sizes (4.7625 and 6.35 cm (1.875 and 2.5 inch) respectively). The total drill hole database used for the estimation of the mineralized material described in this Annual Report on Form 10-KSB contains 165 drill holes representing 66,486 meters (218,000 feet) of core, of which 21,647 sample intervals have been assayed for molybdenum. The core has been meticulously preserved from all previous drill programs. The half of the core not used for analysis has been available to our contractors.

The Mount Hope database is comprised of 165 drill holes (the majority of which were completed by Exxon) containing 218,000 ft (66,486 m) of core with 21,647 sample intervals, of which 20,986 intervals have been assayed for molybdenum (percent (%) elemental molybdenum (Mo)). We have compared the database information with check assay results on 49 samples which confirm the historic sample and assay procedures used at Mount Hope prior to our involvement and give us confidence in the integrity of the Mount Hope Geologic database.

Mineralization to Be Mined

The table below summarizes the mineralized material and head grades we expect to be mined under our current mine plans for Mount Hope.

Mill Feed Ore Statistics

Category	Cutoff Grade Mo %	Ktonnes	Average Grade Mo %	Mo Recovery %
Ore in Years 1-5	0.054	160,601	0.111	89.3
Ore in Years -1-10	0.054	759,590	0.101	89.3
Ore in Years 1-20	0.047	324,922	0.087	89.3

The modeled pit, including the above mineralized material, contains an estimated 2.5 billion tonnes (2.7 billion tons) of total material, including the anticipated direct mill feed from the pit and the stockpile rehandling during the last eleven years of operation after mining of the ore body concludes. The total production is based on a life of mine and has an average 0.042 Mo cutoff grade.

Mining

The Mount Hope Project is planned for production by conventional large-scale, hard-rock, open-pit mining methods. A large mine is being proposed and large-scale mining equipment is to be used.

The current mine plan provides for primary loading by initially one and, ultimately two, electric cable shovels with 43.5 cubic meter (57 cubic yard) shovels. Clean up and support loading will be provided by an 18 cubic meter (23.5 cubic yard) capacity front end loader, and hauling by 232 tonne (255 ton) capacity haul trucks. The mine fleet is expected to grow from eight trucks initially to 20 trucks in year six.

Mineralized material will be hauled directly to the crusher at the southeast side of the pit. Waste will be delivered to one of four approved waste sites located around the mine. One low grade stockpile will be located on the south of the pit. Although much of the stockpile grade material is expected to go directly to the mill, some will be temporarily stockpiled depending on the cutoff grade. This material will be re-handled and processed through the plant at various times during the 51-year mine life. The planned capacity of the stockpile is 60,000 tonnes (66,139 tons).

Process Overview

The process circuit will include:

- **Primary Crusher & Coarse Ore Stockpile** The primary crusher (62x75 superior gyratory) will be located adjacent to the pit and crushed ore will be fed to a 60,000 tonne (66,139 tons) live capacity stockpile.
- **SAG & Ball Mill Circuit** Ore will be reclaimed from the stockpile from one of four feeders and related conveyors located in a tunnel under the stockpile. The coarse ore will be fed by conveyor to the SAG mill. Following the SAG mill, the ore will be ground to 80% passing 150 microns (0.006 in.) in the ball mill.
- **Conveyors, stockpile feeders and the SAG mill** are currently expected to handle 40,000 tonnes (44,093 tons) per day. Additional surface space will be provided for to allow the installation of an additional ball in year 11 to bring the throughput up to 50,000 tonnes (55,116 tons) per day starting in year 12.
- **Flotation Circuit** Following the grinding circuit, the ore will be processed in the flotation plant at a rate of 40,000 tonnes (44,093 tons) per day in years 1-11. An additional 160 cubic meter (210 cubic yards) flotation cell will be added to the rougher circuit in year 11 to bring the capacity up to 50,000

tonnes (55,116 tons) per day in year 12. The molybdenum ore will be treated through one stage of a rougher/scavenger followed by five stages of cleaner flotation to produce the final molybdenum concentrate. Recent metallurgical results on IGMI ore, indicated that an estimated mill recovery of approximately 90% is achievable across grades ranging from 0.04% through 0.1% Mo with final concentrate grades ranging from 53-55% Mo.

- **Roaster Circuit** We are currently planning to construct a multi-hearth roaster to process our molybdenum concentrates to produce a final technical grade molybdenum oxide product, with the molybdenum contained in the TMO ranging from 62% to 64%. We believe there is currently a shortage of global molybdenum roasting facilities. Having our own roasting facility enable us to be fully integrated and potentially generate toll-roasting revenue from third parties.

Metallurgical Testing

The metallurgical profile for the project is based on test work conducted in 2005 and 2006 which demonstrated that the Mount Hope ores are metallurgically uncomplicated. These tests confirmed that recovery of approximately 90% Mo at final concentrate grades of 53-55% Mo are achievable across all expected project ore grades. We are currently conducting additional metallurgical testing scheduled to be completed in the second quarter of 2007 that will determine geostatistics for grinding, recovery and concentrate grade across various ore lithologies and alteration types. These results will be used to predict the metallurgical performance for the first ten years of operation and to predict the grinding circuit design more accurately. The grinding circuit is a key capital and operating cost component of the project.

Tailings Facility

The proposed mining and processing operation is expected to produce approximately 14.6 million tonnes (16.1 million tons) of tailings (including SO₂ scrubber residue) per year during years 1-11 and 18.29 million tonnes (20.2 million tons) per year during years 12-53. Approximately 920 million tonnes (1,014 million tons) of tailings will be produced under the current mine plan. The Tailings Storage Facility (TSF) layout provides for the construction of two tailings impoundments. These TSF s were relocated from Diamond Valley where the larger TSF was next to the main highway, SR278, southeast of the mine area, and placed behind a hill in Kobreh Valley, which is south of the mine area. The TSF s will each have a membrane liner. These changes were made to mitigate environmental concerns, such as potential ground water contamination and visual impacts.

Project Feasibility

We completed the Phase I Feasibility Study and the subsequent Technical Report between November 2004 and December 2005. We are currently in the process of developing a new bankable feasibility study which we anticipate will be completed by July 2007. The bankable feasibility study will include optimized mine and waste rock placement plans as well as revised estimates for capital and operating costs in light of industry wide increases in input commodity, labor and construction costs over the last two years.

Based on initial work done in conjunction with the feasibility study update, as of March 30, 2007, we estimate the initial capital for the Mount Hope project (including the roaster) to be between \$600 million and \$700 million and project cash operating costs for the first five years to be between \$4.00 per lb and \$4.50 per lb and between \$4.00 and \$5.00 for the first 10 years. We expect that these costs will continue to evolve over time based on changes in the industry-wide cost structure as well as changes in our operating strategies and initiatives for the project.

The current overall capital cost estimate for the Mount Hope project is summarized below and includes capital for roasting facilities which will enable us to be fully integrated and potentially generate toll-roasting revenue from third parties.

Estimated Capital Costs	\$ Millions		
Mine Preproduction Stripping	\$ 33	-	\$ 39
Initial Mine Mobile Equipment	\$ 66	-	\$ 77
Process Plant and Infrastructure (excluding Roaster)	\$ 334	-	\$ 390
Roaster Facilities	\$ 55	-	\$ 61
Owners Costs	\$ 33	-	\$ 39
Contingency	\$ 80	-	\$ 94
Total Estimated Initial Capital	\$ 600	-	\$ 700

Ongoing replacement and sustaining mine equipment and process plant capital over the 50+ year operating life plus three year reclamation period is currently estimated to be approximately \$500 and \$550 million. We anticipate that additional detail regarding capital and operating cost estimates will be included in the updated bankable feasibility study.

Economic Analysis

Assuming the mid-point of the total initial capital ranges provided in the table above and a molybdenum price of \$15.00 per pound, we estimate that the Mount Hope project has an after-tax net present value (NPV) of approximately \$840 million at a 10% discount rate and an after-tax return on investment (ROI) of approximately 27%. The charts below show the estimated sensitivities of our NPV and ROI calculations (after-tax) to changes in assumed molybdenum prices, operating costs and capital costs.

Other Properties

Hall-Tonopah

On March 17, 2006, we entered into a purchase agreement with High Desert Winds LLC (High Desert) whereby we purchased High Desert s approximately ten square mile property in Nye County, Nevada, including water rights, mineral and surface rights, buildings and certain equipment, pursuant to an option granted to us in February 2005. The property includes the former Hall molybdenum and copper deposit which was mined by open pit methods between 1982 and 1985 by the Anaconda Minerals Company and between 1988 and 1991 by Cyprus for molybdenum. Equatorial Tonopah, Inc. mined copper from 1999 to 2000 on this property. Much of the deposit was drilled but not developed or mined. At closing, we paid High Desert a cash payment of \$4.5 million for a portion of the property, and in November 2006, made an additional payment of \$989,789 for the remainder of the property

On January 30, 2007, we purchased 100% of the Stock in Equatorial Mining North America, Inc. and its two subsidiaries, which owned a 12% net smelter returns royalty on the Hall-Tonopah property, from Equatorial Mining Pty. Limited. The consideration paid for the Equatorial acquisition was \$4.85 million with an additional deferred payment of \$6 million due upon commercial operation of the property. The acquisition included the royalty as well as \$1.24 million in cash accounts and the assumption of all environmental liabilities on the reclaimed site.

In January 2007, we began a drilling program at Hall-Tonopah on the molybdenum mineralization of the existing molybdenum pit developed by Cyprus and an east extension mineralized area near the top of the east side of the existing pit. \$2.2 million was budgeted for exploratory and mineralization confirmation drilling. This program includes 13 RC drill holes and six diamond drill holes. We expect completion and results of this drilling program in the second quarter of 2007. Assay data will be confirmed through our geological quality control program and then incorporated into the existing geologic model.

History

In 1955, Anaconda leased and optioned the Hall Tonopah molybdenum prospect and mine in order to evaluate extensive Molybdenum and copper occurrences. From 1956 thru 1966, Anaconda explored or delineated molybdenum mineralization over an approximate one mile square area. Drilling indicated extensive mineralization from the surface to a depth of approximately 2,000 feet. Drilling delineated approximately 200 million tons of mineralization grading 0.091 percent molybdenum which was included in a long term mining plan. Mine construction began in 1979 with production from the Hall Mine starting in 1981. Anaconda ceased operations in 1985 due to low metal prices. Between 1982 and 1991, a total of 50 million tons of ore grading 0.11 percent molybdenum were mined by Anaconda and successor mine operator Cyprus Minerals. No further molybdenum mining took place after 1991, leaving 150 million tons of the plan un-mined at a grade of 0.09 percent molybdenum. Our current interest in Hall Tonopah is to review and confirm the mineralization contained in the previous mining plan and to extend the molybdenum zone by additional drilling. A 100 million ton copper zone independent of the molybdenum was the subject of copper leach operation by Equatorial between 1995 and 2002. Approximately 10 million tons were mined before operations ceased in 2002. The copper zone is not of current interest to the Company.

The plant area was generally reclaimed after the 2002 closure. The molybdenum mine remains open and un-reclaimed and is easily accessed for mining. Various facilities and improvements continue to exist on the property that may be of future use for molybdenum operations including a tailing pond, power supply, water rights, water and well system, office and truck and vehicle shops, thickening tanks, coarse ore stockpile reclaim system, water and fuel tanks, roads and other structures. Concentrator facilities were removed from the property and would have to be replaced along with other infrastructure if current feasibility studies indicate attractive economics.

Following the completion of confirmation drilling, the company intends to undertake a feasibility study in order to assess future efforts in bringing Hall Tonopah into production. Our current evaluation program is principally directed toward confirming the drill results of previous operators.

Our combined purchases of the assets and mineral rights at Hall Tonopah included all of the lands required for future operations and all of the mineral rights without reservations or royalties. A new molybdenum operation and mine on this property will be entirely on fee lands owned by the Company. As a result, permitting will be through state agencies, including the Nevada Department of Environmental Quality (NDEP), and we will not be required to go through the Federal NEPA permitting process. Based on this and because we will be seeking to permit what has been a previous mining operation, we expect to have an expedited permitting procedure compared to other start-up projects.

Geology

The ore body at Hall-Tonopah is geometrically displayed as a cylinder, roughly coincident with and draped across, the igneous contact of a Cretaceous quartz porphyry stock and the metamorphosed volcanic host rock. The cylinder plunges -35° to the southeast. Molybdenite occurs as selvages on stockwork quartz veins and on bedding planes and tensional shears in the country rock with the majority of the molybdenum resource is located in the intrusive. Current estimated contained resource is 136 million tonnes (150 million tons) of 0.091% molybdenum.

Host rocks consist of fine grained volcanoclastic rocks, formerly identified as schists and quartzites, intruded by a Cretaceous coarse grained quartz-feldspar porphyry. These are overlain by Tertiary volcanic rocks varying from rhyolitic welded ash-flow tuffs to dacitic and basaltic lava flows. Tertiary andesite dikes intrude the welded tuffs.

The Cretaceous quartz-feldspar porphyry is extensively altered by quartz-muscovite and K-spar flooding. Internal textures are often obscured by overprinting alteration.

The deposit is cross-cut and offset by a number of post mineral faults. Major structural trends are north-south and east by northeast-west by southwest.

Molybdenum mineralization is concentrated in molybdenite, molybdenum di-sulfide, with lesser amounts of molybdenum oxide. Copper is concentrated in a blanket of chalcocite above the REDOX boundary and in chalcopyrite below the oxide zone. Pyrite is a common constituent of most of the ore body.

Molly Star

The Molly Star project consists of 99 unpatented claims located in Sanders County, Montana. The property contains both a copper-silver and a molybdenum-tungsten porphyry signature. Extensive geologic mapping, geophysical, and geochemical studies have been conducted at the site, and thirteen core holes drilled by ASARCO and Noranda Inc. identified three mineralized zones. Future exploration activities would target the high grade core in the large porphyry system as well as the precious metals component.

We consider Molly Star to be an early stage exploration project. We estimate the cost of this project to date to be approximately \$30,000 for claim staking, recording fees, and other work.

Margaret and Red Bonanza

Margaret: On September 28, 2004, we entered into a real estate purchase agreement with Janet Leigh for a 50% interest in 11 mining claims in Skamania County, Washington in exchange for \$100,000 and 400,000 shares of common stock. Extensive geologic mapping, geophysical and geochemical studies were completed by certain exploration companies in the late 1970s and early 1980s. More than 80 drill holes delineating three mineralized zones at shallow depth have indicated gold, silver, copper, zinc and cobalt mineralization. The primary copper mineralization is chalcopyrite, which is the primary sulfide for copper worldwide and normally produces good metallurgical recoveries. We are in possession of the previous drilling records and assay records. On March 24, 2005, we applied for government leases for the portion of the mineral deposit that we do not own. On March 14, 2007, the BLM, in consultation with the U.S. Forest Service, released an Environmental Assessment for public comment to support a decision issuing a federal mineral lease for the Margaret mineral deposit located on Gifford Pinchot National Forest lands in Skamania County, Washington. Without the necessary government leases, the property cannot be developed because the BLM owns the surface rights and controls development of the surface and mineral rights.

Red Bonanza: Located two miles north of the Margaret deposit, the Red Bonanza property consists of 75 unpatented claims held by us. The cost of this project was approximately \$20,000 which represented the cost of claim staking, recording fees, and documenting the property. This work was accomplished during October and November of 2004. The property is currently untested by diamond drilling. The Red Springs Breccia overlying the claims is similar to the eroded breccia cap overlying the Margaret Deposit. Historic copper and molybdenum surface anomalies indicated the potential of a significant porphyry system similar to the Margaret deposit.

Turner Gold

On January 14, 2004, we completed the acquisition from Barretta Mining Inc., Hansa Corporation and Americas Mining Corporation of the Turner Gold project consisting of 265 acres of private land and three unpatented claims in Josephine County, Oregon. The volcanogenic massive sulfide deposit was explored by a number of major companies in the 1980s. More than 80 drill holes delineating three mineralized zones at shallow depth have indicated gold, silver, copper, zinc and cobalt mineralization. Attention will be given to extending mineralized zones by drilling with an emphasis upon diamond drill holes where higher gold values are indicated. We are in possession of the drill core and studies from previous efforts.

As consideration for the Turner Gold project, we made cash payments of \$24,272 and issued 500,000 shares of common stock and warrants to purchase an additional 500,000 shares of common stock at a price of \$0.80 per share for a period of two years, which exercise period was subsequently extended for two additional years. We also paid a finder's fee by issuing 25,000 shares of common stock and warrants to acquire an additional 25,000 shares of common stock. The warrants were exercisable at a price of \$0.80 per share for a period of two years.

Detroit Copper

Located in Marion County, Oregon, the Detroit Copper project consists of 34 unpatented claims. Extensive geologic mapping, geochemistry, and geophysics conducted in the 1970s located a tourmaline-copper breccia pipe, which contains a low-grade core surrounded by a high grade shell with a ring of sheeted veins. Drilling results from 45 holes have indicated copper, gold and silver mineralization.

The primary copper minerals are chalcopyrite and bornite, and the deposit is distinguished by a significant lack of pyrite. These mineralogical characteristics are ideal for mineral concentration by flotation and will likely produce good metallurgical recoveries. We acquired the property by staking unpatented lode claims in October and November of 2004, and expenditures were principally for claim staking and recording fees. We possess drill core and logs and other technical data for this property.

Gazelle Gold

The Gazelle Gold project consists of 119 unpatented claims and is located in Madison County, Montana. The Gazelle Gold project is characterized by a banded iron formation with gold in sulfide species. We identified five gold anomalies from 891 soil samples collected over a three-mile strike length during the 2004 exploration season. The cost of acquisition included costs for staking claims, recording fees, and data acquisition, which amounted to approximately \$50,000.

Other Properties

We currently own two properties located on Little Pine Creek and Prichard Creek (the **Chicago-London**), Shoshone County, Idaho. Further exploration of the properties would be required before making a determination as to the economic feasibility. We do not intend to conduct mineral exploration on either property at this time. The properties are being held for the value of their timber and real estate.

Environmental Issues

Shoshone County, Idaho

Our mineral property holdings in Shoshone County, Idaho include lands contained in mining districts that have been designated as Superfund sites pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act. A Superfund site is an area which can contain many properties owned by many different persons, with each area possibly affected in varying degrees by environmental damage. This

Superfund Site was established to investigate and remediate primarily the Bunker Hill properties of Smelterville, Idaho, a small portion of Shoshone County where a large smelter was located. However, because of the extent of damage caused by this large smelter, the Superfund Site covers the majority of Shoshone County including our Chicago-London and Little Pine Creek properties (which are distant from the original smelter location) as well as many small towns located in Northern Idaho. We are unaware of any pending action or proceeding relating to any regulatory matters that would affect our financial position due to our inactive mining claims in Shoshone County.

During the fall of 2003, we retained a consultant, W.B. Rust, Consulting Metallurgist to conduct a property environmental investigation of the Chicago-London and Little Pine Creek properties. The study was revised in February of 2004. The study revealed no potential for adverse environmental effects at Chicago London other than approximately 8,000 tons of mine waste rocks. These contain metals with a potential for adverse environmental effects. No evidence was observed that there had been any significant adverse environmental effects from the mine waste rock piles. At Little Pine Creek, the investigation revealed no potential for adverse environmental effects other than the General Mine Waste Dump and portal water discharge. The approximately 8,500 tons of mine waste was identified only insofar as it contains metals which thus far have had no adverse environmental effects. The portal discharge was identified because it may contain dissolved metals but because the flow of water is less than 20 gallons per minute; no evidence was observed of any significant adverse environmental effects.

Applicable Mining Laws

Mining in the State of Nevada is subject to federal, state and local law. Three types of laws are of particular importance to the Mount Hope Project: those affecting land ownership and mining rights; those regulating mining operations; and those dealing with the environment.

The Mount Hope Project is situated on lands owned by the United States (**Federal Lands**). Our company, as the owner or holder of the unpatented mining claims, has the right to conduct mining operations on the lands subject to the prior procurement of required operating permits and approvals, compliance with the terms and conditions of the Mount Hope Lease, and compliance with applicable federal, state, and local laws, regulations and ordinances. On Federal Lands, mining rights are governed by the General Mining Law of 1872 as amended, 30 U.S.C. UU 21-161 (various sections), which allows for the location of mining claims on certain Federal Lands upon the discovery of a valuable mineral deposit and on proper compliance with claim location requirements. Historically, the holder of an unpatented mining claim could, upon strict compliance with legal requirements, file a patent application to obtain a full fee title to the surface and mineral rights within the claim; however, continuing Congressional moratoriums have precluded new mining claim patent applications since 1993.

Aside from environmental regulations, the operation of mines is governed by both federal and state regulatory programs. The predominant non-environmental Federal regulatory program affecting operation of the Mount Hope Project is the mine safety regulations administered by Mine Safety and Health Administration. Additional federal laws, such as those governing the purchase, transport or storage of explosives, and those governing communications systems, labor and taxes also apply. State non-environmental regulatory programs affecting operations include the permitting programs for drinking water systems, sewage and septic systems, water rights appropriations, Department of Transportation, and dam safety (engineering design).

Environmental regulations require various permits or approvals before any mining operations on the Mount Hope Project can begin. Federal environmental regulations are administered primarily by the BLM. The EPA has delegated authority for the Clean Water Act and Clean Air Act to the State of Nevada. Thus, the NDEP has primacy for these programs and is responsible for administering the associated permits for the Mount Hope Project. The Bureau of Mining Regulations and Reclamation (**BMRR**) within NDEP also administer the permits for Water Pollution Control and reclamation. The NDEP also administers the permit program for onsite landfills. The Nevada Division of Wildlife administers the artificial industrial pond permit program.

Local laws and ordinances may also apply to such activities as waste disposal, road use and noise levels.

Permitting

Permit Acquisition and Fundamental Environmental Permitting Considerations

We have initiated a plan to obtain the required principal environmental operating permits in anticipation of a possible construction start in late 2008 or early 2009. A staged permit acquisition program is in progress. Baseline studies and data acquisition to support permitting was initiated in the fourth quarter of 2005. Facility designs and operational plans are being refined as data is collected and reviewed to minimize environmental impacts and facilitate the permitting process. The Mount Hope Project is very large, even in the context of the extensive levels of mining in Nevada. In addition, the proposed 53-year project life compares to typical open-pit mine plans of 10 to 15 years. However, the permits for a large, long-lived mine are the same as that for smaller mines, and the same regulations, regulatory agencies and standards apply. The planned mining and processing operations are consistent with numerous other

permitted projects in Nevada, in terms of methods, facility design, equipment, and related engineering plans.

Permitting Process Overview

The development, operation, closure and reclamation of mining projects in the United States require numerous notifications, permits, authorizations and public agency decisions. This section does not attempt to exhaustively identify all of the permits and authorizations that need to be granted, but instead focuses on those that are considered to be critical for project start-up.

Environmental Inventories

There are certain environmental evaluations that routinely must be completed in order to provide the information against which project impacts are measured. Both the U.S. Forest Service (**USFS**) and the Nevada Division of Environmental Protection, BMRR have requirements to profile existing conditions and to evaluate what effects will result from implementing the project plans on the Mount Hope mineralization within the Mine Plan.

Background information on geology, air quality, soils, biology, water resources, social and economic conditions, and cultural resources is currently being assembled for us and will be submitted to the appropriate regulatory agencies.

Mount Hope Permitting Requirements

As noted previously, numerous environmental permits are required to initiate operations at the Mount Hope Project. However five of these permits are most significant permits in terms of the level of analysis and support documentation required, the potential for associated environmental impacts, review time and associated costs. These are the Plan of Operations approval, Water Appropriations Permits, the Water Pollution Control Permit, the Reclamation Permit and the Air Quality Permit.

Plan of Operations Approval Bureau of Land Management

Prior to the BLM 's approving the Plan of Operations and the commencement of our project related operations on public lands, the BLM must comply with the requirements of the United States National Environmental Policy Act Process (the **NEPA Process**). The NEPA requirements include preparation of an Environmental Impact Statement (**EIS**), which is a complete review of the environmental impacts associated with the project as well as alternatives to the project. Preparation of an EIS will require the completion of several baseline studies in the Mount Hope Project area, including but not limited to: cultural, biological, ground water and geochemical studies.

The Plan of Operations has been submitted to the BLM and preliminary plans to support other required permits have been developed and conceptually reviewed with regulatory agencies. Some potential environmental issues associated with the proposed operations have been identified. IGMI anticipates that the mine plan can be refined to address these issues and minimize impacts. This will support permitting efforts and will also reduce potential environmental liability.

Issues of concern are primarily related to geochemistry and the associated potential for acid generation from waste rock, the water quality in the post-mining pit lake, and the potential mobilization of constituents in the tailings. Other significant potential impacts include effects of groundwater pumping on existing water rights and the population influx to the community of Eureka. Extensive laboratory testing has been conducted and is underway to fully evaluate the geochemistry of all material types that will be mined. The waste rock disposal facilities and tailings impoundment designs incorporate components to minimize potential impacts, consistent with accepted and demonstrated industry practices. State of the art

hydrological and geochemical computer modeling is being conducted to determine if treatment of the post-mining pit lake will be required. Water rights are being acquired to eliminate the potential for impacts to existing water rights holders. Finally, IGMI is working with the Eureka County staff to identify opportunities to mitigate impacts from the anticipated population increase.

Baseline studies to completely characterize the existing environmental conditions have been nearly completed. These baseline studies will support a full analysis of impacts, as required by the BLM review process. IGMI has two Notice-level (less than 5 acres of disturbance) approvals from BLM to conduct drilling and other surface activities to further define the geology, collect metallurgical samples, evaluate slope stability and collect other information needed to refine operational plans and designs. Additional permit support activities such as expanded baseline surveys, hydrologic modeling and air dispersion modeling are being conducted per regulatory requirements and standards.

Environmental regulations related to reclamation require that the cost for a third party contractor to perform reclamation activities on the mine site be estimated. This reclamation cost estimate, once approved by BLM and the Nevada Division of Environmental Protection (NDEP) will be the required bond amount. We will be required to post a financial instrument to provide a guarantee that this amount will be available to BLM and NDEP for use in conducting reclamation should we become insolvent or default on our reclamation obligations. The bond amount for a large mining operation, such as the Mount Hope Project, is significant. Although the Reclamation Permit is administered by the NDEP-BMRR, BLM review is required and the reclamation cost estimate must be approved in conjunction with completion of the EIS.

Although the Plan of Operations describes anticipated activities at the mine for the entire mine life, IGMI intends to phase the reclamation bond to reduce bond maintenance costs. The phased reclamation cost estimate will only address the anticipated activities for a three-year period from the point of Plan of Operations approval. The bond estimate must then be recalculated every three years to include the current activities and those activities anticipated to be completed during the subsequent three-year period. It is estimated, based on project assumptions that the project reclamation costs during the first three-year period will be between \$30 and \$40 million. The estimated cost of reclamation will increase with every three-year update in conjunction with the growth of the waste rock pile and the tailings impoundments. It is estimated that bond costs could reach \$100 million at the end of the project (year 53).

Water Appropriation Permits Nevada Division of Water Resources

Mount Hope is centered between two water basins: the Kobeh Basin and the Diamond Basin. Development of the Mount Hope Project will involve significant water demand in an arid region of Nevada. The Nevada Division of Water Resources (**NDWR**) is the responsible agency for granting water rights permits. We have applied to the NDWR for twelve water rights permits for a total of 16,130 acre feet per annum within the Kobeh Basin. Our water needs are estimated by us in our Plan of Operations to be 2,904 acre feet per annum, providing a difference of 12,904 acre feet in excess of our estimated water needs. However, because the NDWR estimates that the existing water rights in Kobeh Basin already equal or exceed the perennial yield, these rights will probably not be granted unless IGMI is able to demonstrate that the yield is greater than that estimated by NDWR.

In an effort to ensure adequate water, we are preparing the studies to support an increase in the perennial yield and is soliciting water rights from existing water rights holders in Kobeh Basin. Water rights from existing users will likely be the most expeditious method to secure the required water, and efforts to date have resulted in IGMI obtaining rights to approximately 60% of the required amount (based on current projected requirements). These rights can be transferred within the basin to locations that are thought to be productive and efficient with respect to pumping and pipeline design. Exploratory drilling to prove out these productive areas is scheduled for April 2007.

Water Pollution Control and Reclamation Permits Nevada Division of Environmental Protection Bureau of Mining Regulation and Reclamation

The BMRR administers the programs for the Water Pollution Control (WPC) Permit and the Reclamation Permit, both of which are required for the Mount Hope Project. The WPC Permit program specifies design criteria for containment of process fluids and mandates development of monitoring, operational and closure plans. Because the standards for facility design are well-defined, there is essentially no opportunity for the WPC permitting process to be side-tracked by non-technical issues. In addition, the permit review process is well-defined, including timelines, and is codified in regulation. This results in a reliable permitting timeline of approximately nine months. Permit application submittal in mid-2007 is anticipated. Reclamation permit requirements are discussed in the BLM section above.

Air Quality Permit Nevada Division of Environmental Protection Bureau of Air Quality

Prior to the commencement of construction activities and in conjunction with facility operations, an air quality permit will be necessary. The Nevada Bureau of Air Quality regulations categorize permit types as Class 1 or Class 2, based on the estimated emissions amounts. The Mount Hope Project is anticipated to be subject to Class 2 permit (smaller emissions) based on preliminary emissions estimates. The permit applications will require completion of an emissions inventory and dispersion modeling to demonstrate that emissions from the project will not result in an exceedance of established air quality standards. This modeling has been initiated and it is expected that modeled concentrations will be well within the standards. Emissions are primarily associated with the crush/grind circuit (particulate matter) and the roaster (sulfur oxides). The project is over 100 miles from a National Park or Monument, which greatly reduces the potential for concerns regarding increased haze in those viewsheds. Roaster emissions will be controlled with a 99+% removal efficiency for sulfur oxides.

The Mount Hope roaster is consistent with and allowed by, the current regulatory and permitting program in Nevada. Naturally occurring mercury concentrations are minor, and mercury emissions will be accordingly small. The permitting duration for this permit is approximately six to nine months, and application submittal in mid- to late 2007 is anticipated.

Hall Tonopah Permitting Requirements

We anticipate that the permitting requirements for the Hall Tonopah mine will be substantially less burdensome than for the Mount Hope Project, due to the extensive private land component of the land package. We control over 14,000 acres, including 5,054 acres of fee land, 946 acres of patented lode claims, 63 acres of patented mill site claims and 7,984 acres of unpatented lode claims. By locating proposed operations entirely on private lands the requirement to prepare an Environmental Impact Statement or other environmental analysis to satisfy NEPA could be avoided. Any other Federal action, including the need to obtain a federal environmental permit would trigger NEPA requirements; we anticipate that no federal actions would be undertaken assuming that the project is located entirely on private lands. Other permits as described in previous sections would be required for the Hall Tonopah Project and the level of analysis and time required is anticipated to be consistent with those described for Mount Hope. However, at this time drilling is being conducted to fully define the mineral resource. Thus, a mine plan has not been developed and permitting can not be initiated.

In addition to land ownership, two other factors distinguish this property from Mount Hope with respect to environmental permitting. First, water consumption is not as significant an issue at Hall Tonopah. Unlike Mount Hope, the areas surrounding Hall Tonopah are not extensively irrigated. In addition, we own significant water rights at the Hall Tonopah site. Second, the area has been mined previously which has resulted in significant surface disturbance. By conducting exploration drilling on pre-existing disturbance to the extent possible, the amount of disturbance created by exploration drilling is

greatly reduced, and permitting requirements to support exploration are reduced. Furthermore, there is extensive environmental information developed to support permitting of the previous mine operation. We believe this information can be used to streamline the permitting process for us by reducing the amount of baseline studies and other technical information that must be developed.

United States Regulatory Matters

General

All of our exploration activities in the United States are subject to regulation by governmental agencies under various mining, mine safety and environmental laws. The nature and scope of regulation depends on a variety of factors, including the type of activities being conducted, the ownership status of land on which the operations are located, the nature of the resources affected, the states in which the operations are located, the delegation of federal air and water-pollution control and other programs to state agencies, and the structure and organization of state and local permitting agencies. We evaluate our projects in light of the cost and impact of regulations on the proposed activity, and evaluate new laws and regulations as they develop to determine the impact on, and changes necessary to, our operations.

Generally, compliance with environmental and related laws and regulations requires us to obtain permits issued by regulatory agencies and to file various reports and keep records of our operations. Some permits require periodic renewal or review of their conditions and may be subject to a public review process during which opposition to our proposed operations may be encountered.

U.S. Federal and State Environmental Law

Our past and future activities in the United States may cause us to be subject to liability under various federal and state laws. Proposed mining activities on federal land trigger regulations promulgated by the USFS, the BLM, and potentially other federal agencies, depending on the nature and scope of the impacts. For operations on federal public lands administered by the BLM that disturb more than five acres, an operator must submit a Plan of Operations to BLM. On USFS-administered lands, the USFS requires the submission of a notice for all mining operations, regardless of size, and a Plan of Operations if the USFS determines that there will be any significant disturbance of the surface.

The Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (**CERCLA**), imposes strict, joint, and several liability on parties associated with releases or threats of releases of hazardous substances. Liable parties include, among others, the current owners and operators of facilities at which hazardous substances were disposed or released into the environment and past owners and operators of properties who owned such properties at the time of such disposal or release. This liability could include response costs for removing or remediating the release and damages to natural resources. We are unaware of any reason why our undeveloped properties would currently give rise to any potential CERCLA liability. We cannot predict the likelihood of future CERCLA liability with respect to our properties, or to surrounding areas that have been affected by historic mining operations.

Under the Resource Conservation and Recovery Act (**RCRA**) and related state laws, mining companies may incur costs for generating, transporting, treating, storing, or disposing of hazardous or solid wastes associated with certain mining-related activities. RCRA costs may also include corrective action or clean up costs.

Mining operations may produce air emissions, including fugitive dust and other air pollutants, from stationary equipment, such as crushers and storage facilities, and from mobile sources such as trucks and heavy construction equipment. All of these sources are subject to review, monitoring, permitting, and/or control requirements under the federal Clean Air Act and related state air quality laws. Air quality permitting rules may impose limitations on our production levels or create additional capital expenditures in order to comply with the permitting conditions.

Under the federal Clean Water Act and delegated state water-quality programs, point-source discharges into Waters of the State are regulated by the National Pollution Discharge Elimination System (**NPDES**) program, while Section 404 of the Clean Water Act regulates the discharge of dredge and fill material into Waters of the United States, including wetlands. Stormwater discharges also are regulated and permitted under that statute. All of those programs may impose permitting and other requirements on our operations.

NEPA requires an assessment of the environmental impacts of major federal actions. The federal action requirement can be satisfied if the project involves federal land or if the federal government provides financing or permitting approvals. NEPA does not establish any substantive standards; it merely requires the analysis of any potential impact. The scope of the assessment process depends on the size of the project. An Environmental Assessment (**EA**) may be adequate for smaller projects. An EIS, which is much more detailed and broader in scope than an EA, is required for larger projects. NEPA compliance requirements for any of our proposed projects could result in additional costs or delays.

The Endangered Species Act (**ESA**) is administered by the U.S. Department of Interior's U.S. Fish and Wildlife Service. The purpose of the ESA is to conserve and recover listed endangered and threatened species and their habitat. Under the ESA, endangered means that a species is in danger of extinction throughout all or a significant portion of its range. Threatened means that a species is likely to become endangered within the foreseeable future. Under the ESA, it is unlawful to take a listed species, which can include harassing or harming members of such species or significantly modifying their habitat. We conduct wildlife and plant inventories as required as part of the environmental assessment process prior to initiating exploration projects. We currently are unaware of any endangered species issues at any of our projects. Future identification of endangered species or habitat in our project areas may delay or adversely affect our operations.

We are committed to fulfilling our requirements under applicable environmental laws and regulations. These laws and regulations are continually changing and, as a general matter, are becoming more restrictive. Our policy is to conduct our business in a manner that safeguards public health and mitigates the environmental effects of our business activities. To comply with these laws and regulations, we have made, and in the future may be required to make, capital and operating expenditures.

U.S. Federal and State Reclamation Requirements

We are subject to land reclamation requirements under state and federal law, which generally are implemented through reclamation permits that apply to exploration activities. These requirements often mandate concurrent reclamation and require the posting of reclamation bonds or other financial assurance sufficient to guarantee the cost of reclamation. If reclamation obligations are not met, the designated agency could draw on these bonds and letters of credit to fund expenditures for reclamation requirements.

Reclamation requirements generally include stabilizing, contouring and re-vegetating disturbed lands, controlling drainage from portals and waste rock dumps, removing roads and structures, neutralizing or removing process solutions, monitoring groundwater at the mining site, and maintaining visual aesthetics. We believe that we currently are in substantial compliance with and are committed to maintaining all of our financial assurance and reclamation obligations pursuant to our permits and applicable laws.

Employees

We presently lease an office that consists of 2,000 square feet and, as of December 31, 2006, we had eight full-time employees. In January 2007, we hired Bruce D. Hansen as our Chief Executive Officer. We plan to add several more employees during 2007, including a Chief Financial Officer and other financial and technical professionals necessary to further the Mount Hope project's technical progress and permitting. We intend to utilize the services of consultants and contractors to provide additional services to us, particularly with regard to the Mount Hope Project.

Risk Factors

You should carefully consider the risks described below and elsewhere in this report, which could materially and adversely affect our business, results of operations or financial condition. If any of the following risks actually occurs, the market price of our common stock would likely decline.

Our investors may lose their entire investment in our securities

An investment in our securities is highly speculative and may result in the loss of the entire investment. Only potential investors who are experienced investors in high risk investments and who can afford to lose their entire investment should consider an investment in our securities.

Our profitability depends largely on the success of our Mount Hope Project, the failure of which would have a material adverse effect on our financial condition

We are focused primarily on the development of our Mount Hope Project. Accordingly, our profitability depends largely upon the successful development and operation of this project. We are currently incurring losses and we expect to continue to incur losses until molybdenum production begins at the Mount Hope Project. We cannot assure you that we will achieve production at the Mount Hope Project or that we will ever be profitable even if production is achieved. The failure to successfully develop the Mount Hope Project would have a material adverse effect on our financial condition, results of operations and cash flows. Even if we are successful in achieving production, an interruption in operations at Mount Hope that prevents us from extracting ore from the Mount Hope Project for any reason would have a material adverse impact on our business.

We require and may not be able to obtain substantial additional financing in order to fund our operations and if we are successful in raising additional capital, it may have a dilutive and other adverse effects on our shareholders

We will require substantial additional capital to develop the Mount Hope Project and to construct the mining and processing facilities at any site chosen for mining. We estimate that following the completion of permitting and engineering at the Mount Hope Project, the initial capital costs for the development of the Mount Hope Project could be between \$600 million and \$700 million, including contingencies, but excluding working capital, reclamation bonding requirements, inflation, interest and other financing costs. Those estimates could change after the detailed engineering process has been completed. We have limited financial resources, do not generate operating revenue, and must finance our Mount Hope Project development costs by other means. We cannot assure you that we will be able to obtain the necessary financing for the Mount Hope Project on favorable terms or at all. Additionally, if the actual costs to complete the development of the Mount Hope Project are significantly higher than we expect, we may not have enough funds to cover these costs and we may not be able to obtain other sources of financing. The failure to obtain all necessary financing would prevent us from achieving production at the Mount Hope Project and impede our ability to become profitable.

We are currently reviewing the technical merits of some of our interests in properties other than the Mount Hope Project, including the Hall-Tonopah property. See **Business Other Properties** . We will also require significant additional capital to permit and/or commence mining activities at this or any of our other potential projects. We cannot assure you that we will be able to obtain the financing necessary to exercise this option and we cannot assure you that we will be able to obtain the necessary financing to commence exploration activities on any of our other properties, should we decide to do so.

If additional financing is not available, or available only on terms that are not acceptable to us, we may be unable to fund the development and expansion of our business, attract qualified personnel, take advantage of business opportunities or respond to competitive pressures. Any of these events may harm our business. Also, if we raise funds by issuing additional shares of our common stock or debt securities convertible into common stock, our shareholders will experience dilution, which may be significant, to their ownership interest in us. If we raise funds by issuing shares of a different class of stock other than our common stock or by issuing debt, the holders of such different classes of stock or debt securities may have rights senior to the rights of the holders of our common stock.

Fluctuations in the market price of molybdenum and other metals could adversely affect the value of our company and our securities

The profitability of our mining operations will be directly related to the market price of the metals we mine. The market prices of base and precious metals such as molybdenum, copper, gold and silver fluctuate widely and are affected by numerous factors beyond the control of any mining company. These factors include fluctuations with respect to the rate of inflation, the exchange rates of the US dollar and other currencies, interest rates, global or regional political and economic conditions and banking crises, global and regional demand, production costs in major molybdenum producing areas and a number of other factors. Any drop in the price of molybdenum and other metals important to our operations would adversely impact our revenues, profits and cash flows. In particular, a sustained low molybdenum price could:

- cause suspension of our development and, ultimately, mining operations at our Mount Hope Project, if such operations become uneconomic at the then-prevailing molybdenum price, thus further reducing revenues;
- prevent us from fulfilling our obligations under our agreements or under our permits and licenses which could cause us to lose our interests in, or be forced to sell, our properties; and
- have a negative effect on the availability of financing to us.

Furthermore, the need to reassess the feasibility of any of our projects if molybdenum prices decline could cause substantial delays or might interrupt operations until the reassessment can be completed. Mineral reserve calculations and life-of-mine plans using significantly lower molybdenum prices could result in reduced estimates of mineral reserves and in material write-downs of our investment in mining properties and increased amortization, reclamation and closure charges.

The volatility in metals prices is illustrated by the quarterly average price ranges from January 2002 through December 2006 for the following metals: Molybdenum (lb) \$2.73 - \$35.37; Copper (lb) \$0.70 - \$3.52. Average molybdenum prices are quoted in *Platt's Metals Week*. Average copper prices are from Comex, a division of the New York Mercantile Exchange, and the London Metal Exchange.

Our profitability is subject to demand for molybdenum, and any decrease in that demand, or increase in the world's supply, could adversely affect our results of operations

Molybdenum is used primarily in the steel industry. The demand for molybdenum from the steel industry and other industries may decline due to a number of factors. A sustained low molybdenum

demand (particularly from China) could cause suspension of our mining operations at our Mount Hope Project. A sustained significant increase in supply could also adversely affect our results. The robustness of the expansion in demand for metals such as molybdenum, is currently fuelled in large part by, and is dependent upon, the growth in Asia.

We may not be able to obtain or renew licenses, rights and permits required to develop or operate our mines, or we may encounter environmental conditions or requirements which would adversely affect our business

In the ordinary course of business, mining companies are required to seek governmental permits for expansion of existing operations or for the commencement of new operations. In addition to requiring permits for the development of the mine, we will need to obtain various mining and environmental permits during the life of the project. Obtaining and renewing the necessary governmental permits is a complex and time-consuming process involving numerous jurisdictions and often involving public hearings and costly undertakings on our part. The duration and success of our efforts to obtain or renew permits will be contingent upon many variables not within our control, including the environmental conditions at the location of the Mount Hope Project. Obtaining or renewing environmental protection permits, including the approval of reclamation plans, may increase costs and cause delays depending on the nature of the activity to be permitted and the interpretation of applicable requirements implemented by the permitting authority. We will be required to make applications to the BLM for the rights to develop our Mount Hope Project. We will also need to successfully complete the National Environmental Policy Act (**NEPA**) process of review and public scrutiny and obtain various state and federal permits including water discharge, waste facility and pit dewatering permits before we can mine and produce molybdenum products at our Mount Hope Project. There can be no assurance that all necessary permits will be obtained and, if obtained, will be renewed, or that in each case the costs involved will not exceed those that we previously estimated. It is possible that the costs and delays associated with compliance with such standards and regulations could become such that we would not proceed with the development or operation of a mine or mines.

The development of the Mount Hope Project may be delayed, which could result in increased costs or an inability to complete the development of the Mount Hope Project

We may experience delays in developing the Mount Hope Project. These could increase its development costs, affect its economic viability, or prevent us from completing its development.

The timing of development of the Mount Hope Project depends on many factors, some of which are beyond our control, including:

- timely issuance of permits and licenses;
- procurement of additional financing;
- acquisition of surface land and easement rights required to develop and operate the project;
- completion of basic engineering; and
- construction of the project.

In addition, factors such as fluctuations in the market price of molybdenum and in foreign exchange or interest rates, as well as international political unrest, could adversely affect our ability to obtain adequate financing to fund the development of the project on a timely basis.

Our mineralization and reserve estimates are uncertain, and any material inaccuracies in those estimates could adversely affect the value of our mineral reserves

There are numerous uncertainties inherent in estimating mineralization and reserves, including many factors beyond our control. The estimation of mineralization and reserves is a subjective process and the accuracy of any such estimates is a function of the quality of available data and of engineering and geological interpretation and judgment. Results of drilling, metallurgical testing, production, and the evaluation of mine plans subsequent to the date of any estimate may justify revision of such estimates. No assurances can be given that the volume and grade of mineralization and reserves recovered and rates of production will not be less than anticipated. Assumptions about prices are subject to greater uncertainty and metals prices have fluctuated widely in the past. Declines in the market price of specialty, base or precious metals also may render mineralization and reserves containing relatively lower grades of ore uneconomic to exploit. Changes in operating and capital costs and other factors including, but not limited to, short-term operating factors such as the need for sequential development of ore bodies and the processing of new or different ore grades, may materially and adversely affect mineralization and reserves.

Any material inaccuracies in our production estimates could adversely affect our results of operations

We have prepared estimates of future molybdenum production. We cannot assure you that we will ever achieve our production estimates or any production at all. Our production estimates depend on, among other things:

- the accuracy of our mineralization and reserves estimates;
- the accuracy of assumptions regarding ore grades and recovery rates;
- ground conditions and physical characteristics of the mineralization, such as hardness and the presence or absence of particular metallurgical characteristics;
- the accuracy of estimated rates and costs of mining and processing; and
- our ability to obtain all permits and construct a processing facility at Mount Hope.

Our actual production may vary from our estimates if any of our assumptions prove to be incorrect. With respect to the Mount Hope Project, we do not have the benefit of actual mining and production experience in verifying our estimates, which increases the likelihood that actual production results will vary from the estimates.

Mining is inherently dangerous and subject to conditions or events beyond our control, and any operating hazards could have a material adverse effect on our business

Mining at the Mount Hope Project will involve various types of risks and hazards, including: environmental hazards, industrial accidents, metallurgical and other processing problems, unusual or unexpected rock formations, structure cave-in or slides, flooding, fires and interruption due to inclement or hazardous weather conditions.

These risks could result in damage to, or destruction of, mineral properties, production facilities or other properties, personal injury or death, environmental damage, delays in mining, increased production costs, monetary losses and possible legal liability. We may not be able to obtain insurance to cover these risks at economically feasible premiums and some types of insurance may be unavailable or too expensive to maintain. We may suffer a material adverse effect on our business and the value of our securities may decline if we incur losses related to any significant events that are not covered by our insurance policies.

Our operations make us susceptible to environmental liabilities that could have a material adverse effect on us

Mining is subject to potential risks and liabilities associated with the potential pollution of the environment and the necessary disposal of mining waste products occurring as a result of mineral exploration and production. Insurance against environmental risk (including potential liability for pollution or other hazards as a result of the disposal of waste products occurring from exploration and production) is not generally available to us (or to other companies in the minerals industry) at a reasonable price. To the extent that we become subject to environmental liabilities, the satisfaction of any such liabilities would reduce funds otherwise available to us and could have a material adverse effect on us. Laws and regulations intended to ensure the protection of the environment are constantly changing, and are generally becoming more restrictive.

There is no guarantee that legal title to the properties in which we have an interest will not be challenged, which could result in the loss of our rights in those properties

The ownership and validity, or title, of unpatented mining claims are often uncertain and may be contested. A successful claim contesting our title or interest to a property could cause us to lose our rights to mine that property. In addition, the success of such a claimant could result in our not being compensated for our prior expenditures relating to the property.

Mineral exploration and mining activities require compliance with a broad range of laws and regulations, and compliance with or violation of these laws and regulations may be costly

Mining operations and exploration activities are subject to national and local laws and regulations governing prospecting, development, mining, production, exports, taxes, labor standards, occupational health and safety, waste disposal, toxic substances, land use, environmental protection, reclamation obligations and mine safety. In order to comply with applicable laws and regulations, we may be required to make capital and operating expenditures or to close an operation until a particular problem is remedied. In addition, if our activities violate any such laws and regulations, we may be required to compensate those suffering loss or damage, and may be fined if convicted of an offense under such legislation. We may also incur additional expenses and the our projects may be delayed as a result of changes and amendments to such laws and regulations.

Land reclamation requirements for exploration properties may be burdensome and may divert funds from our exploration programs

Although variable, depending on location and the governing authority, land reclamation requirements are generally imposed on mineral exploration companies, as well as companies with mining operations, in order to minimize long term effects of land disturbance. Reclamation may include requirements to control dispersion of potentially deleterious effluents and to reasonably re-establish pre-disturbance land forms and vegetation. In order to carry out reclamation obligations imposed on us in connection with our mineral exploration, we must allocate financial resources that might otherwise be spent on further exploration programs.

Non-compliance with our Mount Hope Lease could result in loss of our rights to develop the Mount Hope Project and may adversely affect our business

We lease the Mount Hope Project from Mount Hope Mines, Inc. under the Mount Hope Lease. The terms of the Mount Hope Lease are described under **Business Description of the Mount Hope Project Lease Agreement**. Failure to comply with the terms of the Mount Hope Lease (which principally require us to make prescribed payments on or before certain prescribed dates) could result in

loss of our rights to develop the Mount Hope Project. Any loss of rights under the Mount Hope Lease would have a material adverse effect on us and our ability to generate revenues.

Our ability to operate our company effectively could be impaired if we lose key personnel

We depend on the services of key executives and a small number of personnel focused on the development of the Mount Hope Project. Additionally, the number of persons skilled in the development and operation of mining properties is limited and significant competition exists for these individuals. We cannot assure you that we will be able to employ key personnel or that we will be able to attract and retain qualified personnel in the future. We do not maintain key person life insurance to cover our executive officers. Due to the relatively small size of our company, our failure to retain or attract key personnel may delay or otherwise adversely affect the development of the Mount Hope Project, which would have a material adverse effect on our business.

We may not be able to attract and retain the additional personnel we will need to develop any of our projects, including the Mount Hope Project

We are a small company with a limited operating history and relatively few employees. The development of any of our proposed projects, including the Mount Hope Project, will place substantial demands on us. We will be required to recruit additional personnel and to train, motivate and manage these new employees. There can be no assurance that we will be successful in attracting and retaining such personnel.

The mining industry is intensely competitive, and we may have difficulty effectively competing with other mining companies in the future

Mines have limited lives and, as a result, we must continually seek to replace and expand our mineralization and reserves through the acquisition of new properties. Significant competition exists for the acquisition of properties producing or capable of producing copper, gold and other metals. We may be at a competitive disadvantage in acquiring additional mining properties because we must compete with other individuals and companies, many of which may have greater financial resources and larger technical staffs than we have. As a result of this competition, we may be unable to acquire attractive mining properties on acceptable terms.

Increased costs could affect our ability to become profitable

Costs at any particular mining location frequently are subject to variation due to a number of factors, such as changing ore grade, changing metallurgy and revisions to mine plans in response to the physical shape and location of the ore body. In addition, costs are affected by the price of commodities, such as fuel, electricity and labor. Commodity costs are at times subject to volatile price movements, including increases that could make production at our projects less profitable or uneconomic.

We anticipate significant capital expenditures over the next several years in connection with the development of the Mount Hope Project. Costs associated with capital expenditures have escalated on an industry-wide basis over the last several years, as a result of major factors beyond our control, including the prices of oil, steel and other commodities. Increased costs for capital expenditures have an adverse effect on the returns anticipated from the Mount Hope project.

Shortages of critical parts, equipment and skilled labor may adversely affect our development projects

The industry has been impacted by increased worldwide demand for critical resources such as input commodities, drilling equipment, tires and skilled labor. These shortages have caused and may continue to cause unanticipated cost increases and delays in delivery times, potentially impacting operating costs, capital expenditures and production schedules.

Costs estimates and timing of new projects are uncertain

The capital expenditures and time required to develop new mines or other projects are considerable and changes in costs or construction schedules can affect project economics. There are a number of factors that can affect costs and construction schedules, including, among others:

- availability of labor, power, transportation, commodities and infrastructure;
- increases in input commodity prices and labor costs;
- fluctuations in exchange rates;
- availability of financing;
- difficulty of estimating construction costs over a period of years; and
- delays in obtaining environmental or other government permits.

New legislation, including the Sarbanes-Oxley Act of 2002, may make it difficult for us to retain or attract officers and directors

We may be unable to attract and retain qualified officers, directors and members of board committees required to provide for our effective management as a result of the recent changes and currently proposed changes in the rules and regulations which govern publicly-held companies. The Sarbanes-Oxley Act of 2002 has resulted in a series of rules and regulations by the SEC that increase responsibilities and liabilities of directors and executive officers. We are a small company with a limited operating history and no revenues or profits, which may influence the decisions of potential candidates we may recruit as directors or officers. The perceived increased personal risk associated with these recent changes may deter qualified individuals from accepting these roles.

Any adverse results from evaluation of our internal controls under Section 404 of the Sarbanes-Oxley Act of 2002 could result in a loss of investor confidence in our financial reports and have an adverse effect on the price of our common stock

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002, we expect that beginning with our annual report on Form 10-KSB for the fiscal year ended December 31, 2007, we will be required to furnish a report by management on our internal controls over financial reporting. Such report will contain, among other matters, an assessment by our senior management of the effectiveness of our internal control over financial reporting. This assessment must include disclosure of any material weaknesses in our internal control over financial reporting identified by our management. Such report must also contain a statement that our auditors have issued an attestation report on our management's assessment of such internal controls. Public Company Accounting Oversight Board Auditing Standard No. 2 provides the professional standards and related performance guidance for auditors to attest to, and report on, our management's assessment of the effectiveness of internal control over financial reporting under Section 404.

We will be required to assemble the system and processing documentation and perform the evaluation needed to comply with Section 404, which is both costly and challenging. We cannot be certain that we will be able to complete our evaluation, testing and any required remediation in a timely fashion. During the

evaluation and testing process, if we identify one or more material weaknesses in our internal control over financial reporting, we will be unable to assert that such internal control is effective. If we are unable to assert that our internal control over financial reporting is effective as of December 31, 2007 (or if our auditors are unable to attest that our management's report is fairly stated or they are unable to express an opinion on the effectiveness of our internal controls), we could lose investor confidence in the accuracy and completeness of our financial reports, which would have a material adverse effect on our stock price.

Failure to comply with the new rules may also make it more difficult for us to obtain certain types of insurance, including director and officer liability insurance, and we may be forced to accept reduced policy limits and coverage and/or incur substantially higher costs to obtain the same or similar coverage. The impact of these events could also make it more difficult for us to attract and retain qualified persons to serve on our board of directors, on committees of our board of directors, or as executive officers.

Our common stock has a limited public market, which may adversely affect the market price of our shares and make it difficult for our shareholders to sell their shares

Our shares are currently listed and traded on the American Stock Exchange. There is no assurance, however, that we will be able to meet the continued listing criteria for this exchange or that an active and liquid trading market can be maintained for our common stock. Such a failure may have a material adverse impact on the market price of our shares and a shareholder's ability to dispose of our common stock in a timely manner or at all.

We do not anticipate paying cash dividends in the foreseeable future

We do not plan to pay cash dividends on our common stock in the foreseeable future. The payment of future cash dividends, if any, will be reviewed periodically by our board of directors and will depend upon, among other things, conditions then existing, including our earnings, financial condition and capital requirements, restrictions in financing agreements, business opportunities and conditions, and other factors.

Our officers and directors own a significant percentage of our common stock, which may limit the ability of our shareholders to influence corporate matters and discourage third parties from making a tender offer or bid to acquire us

As of February 28, 2007, Robert L. Russell, our Executive Director and Chairman of the Board, together with R. David Russell, a director and Robert Russell's son, Matthew F. Russell, Robert Russell's son, Mary Russell, the Company's Asst. Secretary/Treasurer and Robert Russell's spouse, Andy Russell, Robert Russell's son, and the Company's Director of Projects and Operations, Jeanene N. Russell Perry, Robert Russell's daughter, Marian R. Russell, Robert Russell's daughter, Marvin Russell, Robert Russell's son, and Melanie Russell, Robert Russell's daughter beneficially owned 13% of our common stock. As of February 28, 2007, the remaining executive officers and directors collectively beneficially owned 9% of our common stock. Together, these shareholders could influence the outcome of any corporate transaction or other matter submitted to our shareholders for approval, including mergers, consolidations and the sale of all or substantially all of our assets, which may discourage third parties from making a tender offer or bidding to acquire us. The interests of these shareholders may differ or conflict with the interests of our other shareholders.

ITEM 3. LEGAL PROCEEDINGS

We are not a party to any legal proceedings and are not aware of any such proceedings known to be contemplated.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

We held an Annual Meeting of Shareholders on December 13, 2006 to consider the election of directors to serve until the next annual meeting and to approve our 2006 Equity Incentive Plan.

At the time of the record date for the meeting, there were 41,481,102 shares of Common Stock outstanding. 26,589,386 shares, or 64.1% of our total outstanding shares, were represented in person or by proxy at the meeting.

The following nine individuals were elected by the shareholders to serve as directors for terms expiring at our next annual meeting and until their successors are elected and qualified:

Name	For	Withheld
Robert L. Russell	26,054,951	532,346
John B. Benjamin	25,152,020	1,435,277
Gene W. Pierson	25,167,020	1,420,277
Norman A. Radford	25,167,020	1,420,277
R. David Russell	24,376,500	2,210,797
Richard F. Nanna	25,167,020	1,420,277
R. Llee Chapman	25,152,020	1,435,277
Roy A. Pickren, Jr.	26,528,271	59,026
Ricardo M. Campoy	26,528,071	59,226

The shareholders also approved the 2006 Equity Incentive Plan by the following vote: 14,513,827 shares of Common Stock (83.9%) were voted in favor, 2,783,038 shares of common stock (15.3%) were voted against, and 809,245 shares of common stock were held in abstention. Subsequent to the 2006 Annual Meeting of Shareholders, Roy A. Pickren, Jr. resigned from the Board for personal reasons.

PART II**ITEM 5. MARKET FOR COMMON EQUITY AND RELATED STOCKHOLDER MATTERS AND SMALL BUSINESS ISSUER OF EQUITY SECURITIES****Market Information**

On August 16, 2006 our common stock began trading on the American Stock Exchange under symbol GMO. From July 26, 2004 to August 16, 2006 our common stock traded on the OTC Bulletin Board under the symbol IGMI. Prior to July 26, 2004, our common stock was traded on the over the counter market in the Pink Sheets.

In the first quarter of 2006 the company issued 50,000 share of restricted common stock for services valued at \$120,250.

The following table sets forth for our common stock, the high and low bid quotations per share as reported by the OTC Bulletin Board for the 3rd quarter of 2004 when our common stock began trading on the OTC Bulletin Board, and for each subsequent quarter. The high and low numbers for 2006 reflect the high and low closing for each of the four quarters of the year. The high and low bid quotations reflect inter-dealer prices, without retail mark-up, mark-down or commission and may not necessarily represent actual transactions.

Year	Quarter	High	Low
2004	Third Quarter(1)	\$ 0.70	\$ 0.05
	Fourth Quarter	\$ 0.90	\$ 0.44
2005	First Quarter	\$ 1.49	\$ 0.71
	Second Quarter	\$ 1.88	\$ 0.98
	Third Quarter	\$ 1.47	\$ 0.85
	Fourth Quarter	\$ 1.80	\$ 1.01
2006	First Quarter	\$ 4.00	\$ 1.15
	Second Quarter	\$ 4.00	\$ 2.30
	Third Quarter	\$ 3.27	\$ 1.92
	Fourth Quarter	\$ 3.35	\$ 1.99
2007	First Quarter (through March 23, 2007)	\$ 4.12	\$ 3.60

(1) Our common stock began trading on the OTC Bulletin Board on July 26, 2004.

Holders

As of January 31, 2007 there were approximately 839 holders of record of our common stock.

Dividends

We have never declared or paid dividends on our common stock and we do not anticipate paying any dividends on our common stock in the foreseeable future. We will pay dividends on our common stock only if and when declared by our board of directors. Our board's ability to declare a dividend is subject to limits imposed by Idaho corporate law. In determining whether to declare dividends, the board will consider these limits, our financial condition, results of operations, working capital requirements, future prospects and other factors it considers relevant.

See Item 11 herein for information relating to our equity compensation plans.

ITEM 6. MANAGEMENT'S DISCUSSION AND ANALYSIS OR PLAN OF OPERATION

The following discussion and analysis of our financial condition and plan of operations should be read in conjunction with our financial statements and the notes to those statements included elsewhere in this Annual Report on Form 10-KSB. This discussion contains forward-looking statements that involve risks and uncertainties. As a result of many factors, such as those set forth under Risk Factors and elsewhere in this Annual Report, our actual results may differ materially from those anticipated in these forward-looking statements.

Overview

We are in the business of exploration, development and, if warranted, the mining of properties containing molybdenum, as well as silver, gold, base metals and other specialty metals. We have an interest in properties on which we intend to conduct mineral exploration. Our principal assets are the Mount Hope Project (which we hold under lease with MHMI), a large-scale, primary molybdenum deposit located in Eureka County, Nevada, United States, and the Hall-Tonopah molybdenum project located in Nye County, Nevada.

We are proceeding with the permitting and development of the Mount Hope Project. The project will include the development of an open pit mine, construction of a concentrator plant, construction of a roaster plant, and construction of all related infrastructure to produce TMO, the most widely marketed molybdenum product. We completed a preliminary mine feasibility study in April 2005. This study provided a study of the economics and capital cost estimates for development of the project and developed a preliminary mine plan. Based on the results of the feasibility study, we exercised our option to lease in October 2005 and entered into the Mount Hope Lease with MHMI. Subsequently, we accomplished a detailed mine feasibility study in December 2005 which verified existing drill hole data and refined the block model and mine plan. In 2006, we initiated the baseline studies necessary for development of an EIS. We completed a Plan of Operations which was accepted by the Battle Mountain office of the BLM in September 2006. In December 2006, the BLM selected Enviroscientists, Inc. of Reno, Nevada, an environmental firm, to complete the EIS for the Mount Hope project. Various environmental data and study tasks are ongoing in connection with the permitting process. The current BLM and contractor schedule demonstrates a Record of Decision in November of 2008. In January 2007, we selected a contractor to accomplish a bankable feasibility study for the project. This study is contracted to be complete by mid 2007. Based on the current estimated timelines for permitting, construction and long-lead equipment, we are targeting initial production at Mount Hope in 2010.

At the Hall-Tonopah project, we are currently conducting a comprehensive drilling and evaluation program to re-confirm and potentially expand the existing molybdenum mineralization.

Critical Accounting Estimates

Estimates

The process of preparing financial statements in conformity with US GAAP requires the use of estimates and assumptions regarding certain types of assets, liabilities, revenues, and expenses. Such estimates primarily relate to unsettled transactions and events as of the date of the financial statements. Accordingly, upon settlement, actual results may differ from estimated amounts.

Provision for Taxes

Income taxes are provided based upon the liability method of accounting pursuant to the Statement of Financial Accounting Standards No. 109, Accounting for Income Taxes (**SFAS No. 109**). Under this approach, deferred income taxes are recorded to reflect the tax consequences in future years of differences between the tax basis of assets and liabilities and their financial reporting amounts at each year-end. A

valuation allowance is recorded against the deferred tax asset if management does not believe we have met the more likely than not standard imposed by SFAS No. 109 to allow recognition of such an asset.

Property and Equipment

The Company evaluates its long-lived assets for impairment when events or changes in circumstances indicate that the related carrying amount may not be recoverable. If the sum of estimated future net cash flows on an undiscounted basis is less than the carrying amount of the related asset grouping, an asset impairment is considered to exist. The related impairment loss is measured by comparing estimated future net cash flows on a discounted basis to the carrying amount of the asset. Changes in significant assumptions underlying future cash flow estimates may have a material effect on the Company's financial position and results of operations. To date no such impairments have been identified. Property and equipment are being depreciated over useful lives of three to seven years using straight-line depreciation.

Share-Based Compensation

We account for stock-based compensation in accordance with SFAS No. 123(R), *Share-Based Payment*. Under the fair value recognition provisions of this statement, share-based compensation cost is measured at the grant date based on the value of the award and is recognized as expense over the vesting period. Determining the fair value of share-based awards at the grant date requires judgment, including estimating expected dividends. In addition, judgment is also required in estimating the amount of share-based awards that are expected to be forfeited. If actual results differ significantly from these estimates, stock-based compensation expense and our results of operations could be materially impacted.

Results of Operations

Year Ended December 31, 2006 Compared to Year Ended December 31, 2005

Our net loss for the year ended December 31, 2006 was \$12,745,260 as compared to a net loss of \$4,518,271 for the year ended December 31, 2005. The increase of \$8,226,989 is attributable primarily to costs incurred in connection with exploration activities and our Plan of Operations, Environmental Impact Statement and bankable feasibility study. We have also incurred higher corporate and administrative costs in a number of areas consistent with our substantially increased activity levels. These costs include employee compensation expenses, expansion or corporate personnel and associated costs, marketing and investor relations expense, general legal expenses, and accounting and compliance issues reflecting the greater complexity of our operations.

Year Ended December 31, 2005 Compared to Year Ended December 31, 2004

Our net loss for the year ended December 31, 2005 was \$4,518,271 compared to a net loss of \$2,337,039 for the year ended December 31, 2004. The increase of \$2,181,232 is attributable primarily to property acquisitions, accounting for options, and the Mount Hope feasibility study. During the second, third and fourth quarters of 2005 we incurred permitting and associated expenses that significantly contributed to additional operating expenses. We also incurred higher corporate and administrative costs in a number of areas consistent with our substantially increased activity levels. These costs include new hires and employee compensation expenses, marketing and investor relations expenses, general legal expenses, and accounting and compliance issues reflecting the greater complexity of our operations.

Exploration and development expenditures of \$6,020,850 were incurred at our Mount Hope and Hall Tonopah projects during 2006 and we will see these expenses escalate over the next year. In 2005 we incurred \$2,397,153 in exploration and development expenditures at the Mount Hope Project as exploration and development activity proceeded at a very aggressive pace. This is consistent with our stated objective to complete our Mount Hope Project plans and to focus on the permitting required to bring the

project to commercial production. All of the expenditures during the 2005 fiscal year were related to this objective and associated feasibility study costs represent the majority of expenditures at the Mount Hope Project.

Liquidity and Capital Resources

We have limited capital resources and thus have had to rely upon the sale of equity securities for the cash required for exploration and development purposes, for acquisitions and to fund our administration. Since we do not expect to generate any revenues in the near future, we must continue to rely upon the sale of our equity and debt securities to raise capital. There can be no assurance that financing, whether debt or equity, will be available to us in the amount required at any particular time or for any period or, if available, that it can be obtained on terms satisfactory to us.

Our cash balance as at December 31, 2006 was \$17,882,543 compared to \$256,773 as of December 31, 2005. Total assets as at December 31, 2006 were \$26,390,788 compared to \$849,646 as of December 31, 2005. These increases were due to receipt of proceeds from the private placements of our securities that were completed on January 10, 2006 and February 15, 2006, offset by the expenditures for purchase of the Hall Tonopah property and the purchase of the Gale Ranch and water rights. Liabilities as at December 31, 2006 were \$1,028,280 compared to \$815,753 as of December 31, 2005. This increase in liabilities reflects our increase in activity over the past year.

On April 27, 2005, we concluded a private placement of 2,998,932 units at a price of \$0.75 per unit. Each unit consisted of one share of our common stock and one warrant to purchase one share of our common stock. Each warrant is exercisable for 24 months from the date of issuance and carries an exercise price of \$1.00 per share. The gross proceeds of this offering were \$2,249,200 and, after payment of sales commissions and finder's fees, we received net proceeds of \$2,108,150.

On January 10, 2006, we concluded a private placement of 3,441,936 units at a price of \$1.10 per unit. Each unit consisted of one share of our common stock and one-half of one warrant to purchase one share of our common stock. Each whole warrant is exercisable for 24 months from the date of issuance and carries an exercise price of \$1.75 per whole share. The gross proceeds of this offering were \$3,786,129 and, after payment of sales commissions and finder's fees, we received net proceeds of \$3,620,730.

On February 15, 2006, we concluded a private placement of 15,000,000 units at a price of \$2.00 per unit. Each unit consisted of one share of our common stock and a warrant to purchase one-half of a share of our common stock. Each warrant is exercisable for five years from the date of issuance and carries an exercise price of \$3.75 per whole share. The gross proceeds of this offering were \$30,000,000.00 and, after payment of sales commissions and finder's fees, we received net proceeds of \$27,875,000. In the aggregate, we issued 15 million shares of common stock and warrants to purchase an additional 8.3 million shares, including warrants issued as compensation to the placement agent.

Edgar Filing: IDAHO GENERAL MINES INC - Form 10KSB

In December 2006, we entered into a five year capital lease for a piece of office equipment. The principal for this lease is \$29,488 and the interest rate is 6.36%. In December 2006, we entered into a five year fair value lease for an additional piece of office equipment. Because this lease exceeds the 75% of the estimated useful life of the equipment this is treated as a capital lease with principal of \$14,389 and an interest rate of 3.07%. In December 2006, we also entered into a note to purchase a 2007 1 ton pickup for \$33,571 at an interest rate of 0.9% with a term of three years. The table below shows these obligations over the next five years.

Year	Lease Payment	Interest on Leases	Note Payment	Note Interest
2006	\$ 834	\$ 193		
2007	10,008	2,095	11,350	256
2008	10,008	1,670	11,350	156
2009	10,008	1,220	11,350	55
2010	10,008	744		
2011	9,174	240		
Total	\$ 50,040	\$ 6,162	\$ 34,050	\$467

Set forth below is a schedule of our contractual obligations for payments under the Mount Hope lease agreement:

Contractual Obligations for Future Payments under Mount Hope Lease

Date	Fixed Payment	Project Financing Received by Date Indicated	Project Financing Not Received and Deferral Elected
April 19, 2007	\$125,000		
October 19, 2007	\$350,000		
October 19, 2008		Greater of 3% of Construction Capital Cost Estimate or \$2,500,000(1)(3)(4)	\$350,000
October 19, 2009		Greater of 3% of Construction Capital Cost Estimate or \$2,500,000(3)	\$350,000
October 19, 2010		\$2,500,000(3)	Greater of \$2,500,000 or 3% of Construction Capital Cost Estimate(3)(4)
October 19, 2011		3% of Construction Capital Cost Estimate(3)	Greater of (a) \$2,500,000 or (b), if 3% of Construction Capital Cost Estimate is greater than \$2,500,000, then 50% of the difference between 3% and \$2,500,000(3)(4)
October 19, 2012		3% of Construction Capital Cost Estimate(3)	Greater of (a) \$2,500,000 or (b), if 3% of Construction Capital Cost Estimate is greater than \$2,500,000, then 50% of the difference between 3% and \$2,500,000(3)(4)
October 19, 2013 and each year thereafter(2)	\$500,000(3)		

(1) If Project Financing is not received by October 19, 2008, we may elect to defer this payment and proceed to make the payments under the column labeled Project Financing Not Received and Deferral Elected. If prior to making all of the payments under the column Project Financing Not Received and Deferral Elected we obtain project financing, we would be required to make this payment and to pay \$500,000 each year thereafter.

(2) In addition to the payments above, we are required to pay to MHMI a production royalty after the commencement of Commercial Production of the greater of (i) \$.20/lb of molybdenum metal (or the equivalent thereof if another Product is sold)

sold from the property (not to exceed the amount of Net Returns we receive for those products) or (ii) 3% of the Net Returns, subject to certain adjustments as set forth in the lease.

(3) To be offset from the production royalty described in (3) above. We may recover the aggregate of these payments by retaining 50% of each production royalty payment due to MHMI.

(4) Construction Capital Cost Estimate means our projected costs plus 10% to put the Mount Hope property into commercial production calculated in accordance with the Mount Hope Lease. See Part I, Items 1&2 Description of Business and Properties description of Mount Hope Project Royalty, Agreements and Encumbrances for further information relating to the calculation of these costs and payments.

Changes in Accounting Policies

We did not change our accounting policies during fiscal 2004, 2005, or 2006.

Board of Directors
Idaho General Mines, Inc.
Spokane, Washington

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

We have audited the accompanying balance sheets of Idaho General Mines, Inc. (an exploration stage company) as of December 31, 2006 and 2005, and the related statements of operations, stockholders' equity and cash flows for the years ended December 31, 2006, 2005 and 2004 and for the period from January 1, 2002 (inception of exploration stage) to December 31, 2006. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Idaho General Mines, Inc. as of December 31, 2006 and 2005, and the results of its operations, stockholders' equity and cash flows for the years ended December 31, 2006, 2005 and 2004 and for the period from January 1, 2002 (inception of exploration stage) to December 31, 2006, in conformity with accounting principles generally accepted in the United States of America.

NOTE 1 DESCRIPTION OF BUSINESS

Idaho General Mines, Inc. (the Company or IGMI) is an Idaho corporation originally incorporated as General Mines Corporation on November 23, 1925. In 1966, the Company amended its articles of incorporation to change its name to Idaho General Petroleum and Mines Corporation, and amended its articles again in 1967 changing its name to Idaho General Mines, Inc. The Company's historic activities have principally consisted of the exploration for nonferrous and precious metals in and around Shoshone County, Idaho. The Company entered a new exploration stage in early January 2002 when it shifted its focus to minerals exploration. In May 2004, the Company began a search for substantive mineral properties with a focus on metals such as copper, zinc, silver, gold and specialty metals. IGMI entered into an option to lease the Mount Hope molybdenum property located in Nevada in November 2004 and exercised that option in October 2005 after several phases of feasibility studies and project design studies which indicated the attractiveness of the project. IGMI similarly optioned the Hall Tonopah molybdenum-copper property, also in Nevada, in 2005 and exercised that option to purchase the Hall Tonopah property in March 2006 with the intent of assessing economic feasibility by exploring and assessing the property's potential. Accordingly, IGMI has assumed the role of exploring, and as warranted, developing major mineral deposits which are at a relatively advanced stage and are worthy of economic consideration. IGMI has obtained substantial funding to carry out the above objectives and plans to carry such projects forward to production as indicated and as success in raising of capital allows.

NOTE 2 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

This summary of significant accounting policies is presented to assist in understanding the financial statements. The financial statements and notes are representations of the Company's management, which is responsible for their integrity and objectivity. These accounting policies conform to accounting principles generally accepted in the United States of America and have been consistently applied in the preparation of the financial statements.

Accounting Method

The Company's financial statements are prepared using the accrual basis of accounting in accordance with accounting principles generally accepted in the United States of America.

Accounting Pronouncements Recent

In February 2007, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 159, The Fair Value Option for Financial Assets and Financial Liabilities Including an amendment of FASB Statement No. 115 (hereinafter SFAS No. 159). This statement permits entities to choose to measure many financial instruments and certain other items at fair value. The objective is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. This Statement is expected to expand the use of fair value measurement, which is consistent with the Board's long term measurement objective for accounting for financial instruments. This statement is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007, although earlier adoption is permitted. Management has not determined the effect that adopting this statement would have on the Company's financial condition or results of operation.

In September 2006, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 158, Employers Accounting for Defined Benefit Pension and Other Postretirement Plans an amendment of FASB Statement No. 87, 88, 106, and 132(R) (hereinafter SFAS No 158). This statement requires an employer to recognize the overfunded or underfunded status of a

defined benefit postretirement plan (other than a multiemployer plan) as an asset or liability in its statement of financial position and to recognize changes in that funded status in the year in which the changes occur through comprehensive income of a business entity or changes in unrestricted net assets of a not for profit organization. This statement also requires an employer to measure the funded status of a plan as of the date of its year end statement of financial position, with limited exceptions. This adoption of this statement had no immediate material effect on the Company's financial condition or results of operations.

In September 2006, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 157, Fair Value Measurements (hereinafter SFAS No. 157). This statement defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles (GAAP), and expands disclosure about fair value measurements. This statement applies under other accounting pronouncements that require or permit fair value measurements. This statement does not require any new fair value measurements, but for some entities, the application of this statement may change current practice. The adoption of this statement had no immediate material effect on the Company's financial condition or results of operations.

In June 2006, the Financial Accounting Standards Board issued FASB Interpretation No. 48, Accounting for Uncertainty in Income Taxes an interpretation of FASB Statement No 109 (hereinafter FIN 48), which prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of tax position taken or expected to be taken in a tax return. FIN 48 also provides guidance on de-recognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 is effective for fiscal years beginning after December 15, 2006. The Company does not expect the adoption of FIN 48 to have a material impact on its financial reporting, and the Company is currently evaluating the impact, if any the adoption of FIN 48 will have on its disclosure requirements.

In February 2006, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 155, Accounting for Certain Hybrid Financial Instruments, an Amendment of FASB Standards No. 133 and 140 (hereinafter SFAS No. 155). This statement established the accounting for certain derivatives embedded in other instruments. It simplifies accounting for certain hybrid financial instruments by permitting fair value remeasurement for any hybrid instrument that contains an embedded derivative that otherwise would require bifurcation under SFAS No. 133 as well as eliminating a restriction on the passive derivative instruments that a qualifying special-purpose entity (SPE) may hold under SFAS No. 140. This statement allows a public entity to irrevocably elect to initially and subsequently measure a hybrid instrument that would be required to be separated into a host contract and derivative in its entirety at fair value (with changes in fair value recognized in earnings) so long as that instrument is not designated as a hedging instrument pursuant to the statement. SFAS No. 140 previously prohibited a qualifying special-purpose entity from holding a derivative financial instrument that pertains to a beneficial interest other than another derivative financial instrument. This statement is effective for fiscal years beginning after September 15, 2006, with early adoption permitted as of the beginning of an entity's fiscal year. Management does not expect the adoption of this statement to have a material impact on its financial position or results of operations.

In May 2005, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 154, Accounting Changes and Error Corrections, (hereinafter SFAS No. 154) which replaces Accounting Principles Board Opinion No. 20, Accounting Changes, and SFAS No. 3, Reporting Accounting Changes in Interim Financial Statements An Amendment of APB Opinion No. 28. SFAS No. 154 provides guidance on accounting for and reporting changes in accounting principle and error corrections. SFAS No. 154 requires that changes in accounting principle be applied retrospectively to prior period financial statements and is effective for fiscal years beginning after

December 15, 2005. Management does not expect the adoption of this statement to have a material impact on its financial position or results of operations.

In March 2005, the Financial Accounting Standards Board issued FASB Interpretation No. 47 *Accounting for Conditional Asset Retirement Obligations* an Interpretation of SFAS No. 143, (hereinafter *FIN No. 47*). FIN No. 47 provides clarification of the term conditional asset retirement obligation as used in paragraph A23 of SFAS No. 143, *Accounting for Asset Retirement Obligations*. SFAS No. 143 applies to legal obligations associated with the retirement of a tangible long-lived asset, and states that an entity shall recognize the fair value of a liability for an asset retirement obligation in the period in which it is incurred if a reasonable estimate of fair value can be made. The term conditional asset retirement obligation refers to a legal obligation to perform an asset retirement activity in which the timing and/or method of settlement are conditional on a future event that may or may not be within the control of the entity. The obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement. Thus, the timing and/or method of settlement may be conditional on a future event. Accordingly, an entity is required to recognize a liability for the fair value of a conditional asset retirement obligation if the fair value of the liability can be reasonably estimated. Management does not believe the adoption of this statement impacts these financial statements. However, recognition of asset retirement obligation liabilities may become necessary in the future.

Cash and Cash Equivalents

For the purposes of the statement of cash flows, the Company considers all highly liquid investments with original maturities of three months or less to be cash equivalents.

Derivative Instruments

The Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 133 (hereinafter *SFAS No. 133*), *Accounting for Derivative Instruments and Hedging Activities*, as amended by SFAS No. 137, *Accounting for Derivative Instruments and Hedging Activities* *Deferral of the Effective Date of FASB No. 133*, and SFAS No. 138, *Accounting for Certain Derivative Instruments and Certain Hedging Activities*, and SFAS No. 149, *Amendment of Statement No. 133 on Derivative Instruments and Hedging Activities*, the last of which is effective June 30, 2003. These statements establish and clarify accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. They require that an entity recognize all derivatives as either assets or liabilities in the balance sheet and measure those instruments at fair value.

If certain conditions are met, a derivative may be specifically designated as a hedge, the objective of which is to match the timing of gain or loss recognition on the hedging derivative with the recognition of (i) the changes in the fair value of the hedged asset or liability that are attributable to the hedged risk or (ii) the earnings effect of the hedged forecasted transaction. For a derivative not designated as a hedging instrument, the gain or loss is recognized in income in the period of change.

Historically, the Company has not entered into derivatives contracts to hedge existing risks or for speculative purposes.

Estimates

The process of preparing financial statements in conformity with accounting principles generally accepted in the United States of America requires the use of estimates and assumptions regarding certain types of assets, liabilities, revenues, and expenses. Such estimates primarily relate to unsettled transactions and events as of the date of the financial statements. Accordingly, upon settlement, actual results may differ from estimated amounts.

Exploration Stage Activities

The Company has been in the exploration stage since January 2002 and has not realized any revenue from operations. It will be primarily engaged in minerals exploration until it enters a development or operations stage.

Fair Value of Financial Instruments

The Company's financial instruments as defined by Statement of Financial Accounting Standards No. 107, "Disclosures about Fair Value of Financial Instruments," include cash, accounts payable and accrued liabilities. All instruments are accounted for on a historical cost basis, which, due to the short maturity of these financial instruments, approximates fair value at December 31, 2006, 2005 and 2004.

Basic and Diluted Net Loss Per Share

Net loss per share was computed by dividing the net loss by the weighted average number of shares outstanding during the period. The weighted average number of shares was calculated by taking the number of shares outstanding and weighting them by the amount of time that they were outstanding. Diluted net loss per share for IGMI is the same as basic net loss per share, as the inclusion of common stock equivalents would be antidilutive.

Mineral Exploration and Development Costs

All exploration expenditures are expensed as incurred. Significant property acquisition payments for active exploration properties are capitalized. If no minable ore body is discovered, previously capitalized costs are expensed in the period the property is abandoned. Expenditures to develop new mines, to define further mineralization in existing ore bodies, and to expand the capacity of operating mines, are capitalized and amortized on a units-of-production basis over proven and probable reserves.

Should a property be abandoned, its capitalized costs are charged to operations. The Company charges to operations the allocable portion of capitalized costs attributable to properties sold. Capitalized costs are allocated to properties sold based on the proportion of claims sold to the claims remaining within the project area.

Mining Claims and Land

Costs of acquiring and developing mineral properties are capitalized as appropriate by project area. Exploration and related costs and costs to maintain mineral rights and leases are expensed as incurred. When a property reaches the production stage, the related capitalized costs are amortized using the units-of-production method on the basis of periodic estimates of ore reserves. Mineral properties are periodically assessed for impairment of value, and any subsequent losses are charged to operations at the time of impairment. If a property is abandoned or sold, its capitalized costs are charged to operations.

Provision for Taxes

Income taxes are provided based upon the liability method of accounting pursuant to Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes" (hereinafter "SFAS No. 109"). Under this approach, deferred income taxes are recorded to reflect the tax consequences in future years of differences between the tax basis of assets and liabilities and their financial reporting amounts at each year-end. A valuation allowance is recorded against the deferred tax asset if management does not believe the Company has met the "more likely than not" standard imposed by SFAS No. 109 to allow recognition of such an asset.

Property and Equipment

During the year ended December 31, 2006 the Company purchased vehicles for \$164,575, field equipment for \$10,116, and office and computers and related equipment for \$222,146. The vehicles, equipment and computers will be depreciated over useful lives of three to seven years using straight line depreciation. Depreciation expense for the year ended December 31, 2006 is \$57,578.

During the year ended December 31, 2005, the Company purchased equipment costing \$16,873 and computer equipment for \$7,589. The equipment and computer will be depreciated over useful lives of three to seven years using a straight-line depreciation method. Depreciation expense for the year ended December 31, 2005 is \$11,215.

Reclamation and Remediation

Expenditures for ongoing compliance with environmental regulations that relate to current operations are expensed or capitalized as appropriate. Expenditures resulting from the remediation of existing conditions caused by past operations that do not contribute to future revenue generations are expensed. Liabilities are recognized when environmental assessments indicate that remediation efforts are probable and the costs can be reasonably estimated.

Estimates of such liabilities are based upon currently available facts, existing technology and presently enacted laws and regulations taking into consideration the likely effects of inflation and other societal and economic factors, and include estimates of associated legal costs. These amounts also reflect prior experience in remediating contaminated sites, other companies' clean-up experience and data released by The Environmental Protection Agency or other organizations. Such estimates are by their nature imprecise and can be expected to be revised over time because of changes in government regulations, operations, technology and inflation. Recoveries are evaluated separately from the liability and, when recovery is assured, the Company records and reports an asset separately from the associated liability. At December 31, 2006 and 2005 the Company had no accrued liabilities for compliance with environmental regulations.

Reclassification

Certain amounts from prior periods have been reclassified to conform to the current period presentation. This reclassification has resulted in no changes to the Company's accumulated deficit or net losses presented. Previously, directors' fees paid by issuing common stock were not disclosed separately in the Company's statement of cash flows. These fees were part of services and expenses paid with common stock.

NOTE 3 INVESTMENTS

The Company accounts for its investments in debt and equity securities in accordance with the provisions of Statement of Financial Accounting Standards No. 115, "Accounting for Certain Investments in Debt and Equity Securities," and reports its investments in available for sale securities at their fair value, with unrealized gains and losses excluded from income or loss and included in other comprehensive income or loss.

In November 2006, the Company acquired 150,000 shares of common stock at \$2.00 per share of Atlas Precious Metals, Inc. in connection with a property acquisition. Because the shares are not readily marketable and relate to a privately held entity, the Company has elected to record its interest at a fair value of zero for financial reporting purposes.

At December 31, 2006 and 2005 the Company had no marketable securities, apart from the aforementioned Atlas stock.

NOTE 4 LAND, MINING CLAIMS, PROPERTY, AND EQUIPMENT

During the year ended December 31, 2006 the Company purchased vehicles for \$164,575, field equipment for \$10,116, and office and computers and related equipment for \$222,146. The vehicles, equipment and computers will be depreciated over useful lives of three to seven years using straight line depreciation. Depreciation expense for the year ended December 31, 2006 is \$57,578.

During the year ended December 31, 2005, the Company purchased equipment costing \$16,873 and computer equipment for \$7,589. The equipment and computer will be depreciated over useful lives of three to seven years using a straight-line depreciation method. Depreciation expense for the year ended December 31, 2005 is \$11,215.

On November 12, 2004, IGMI entered into an option to lease all property and assets of the Mount Hope Molybdenum Property from Mt. Hope Mines, Inc. Exercise of the option in October 2005 allows IGMI to proceed for the next 30 years with permitting, developing and mining the deposit and for so long thereafter as IGMI maintains an active operation. At December 31, 2004, the Company had paid \$456,286 on the Mount Hope option and issued 500,000 shares of common stock with warrants to purchase 500,000 shares of common stock for the Mount Hope option.

Pursuant to the terms of the lease, the underlying total royalty on production payable to Mt. Hope Mines, Inc., less certain deductions, is 3 percent for a molybdenum price up to \$12 per pound, 4 percent for a molybdenum price up to \$15 per pound, and 5 percent for a molybdenum price above \$15 per pound. IGMI is subject to certain periodic payments totaling \$1,550,000 to be paid as per schedule between January 2006 and October 2010. IGMI has a best efforts obligation, by the third anniversary of the lease, to pay Mt. Hope Mines, Inc. a recoverable periodic payment (advance royalty) of 3 percent of the estimated capital cost of the project. This obligation to pay 3 percent of the construction capital is subject to certain extension provisions through October 2013. Minimum royalty payment after the mine commences operations is \$0.27 a pound of molybdenum if produced or \$500,000 per year if the plant is idle. Additionally, IGMI is obligated to pay Exxon Mineral Company a one percent net smelter royalty on all production

During the year ended December 31, 2005 the Company entered into an option agreement with High Desert Winds LLC (High Desert) for High Desert s approximately ten square mile property in Nye County, Nevada, including water rights, mineral and surface rights, buildings and certain equipment (the Hall Tonopah Property). Pursuant to the terms of this agreement, the Company was granted a nine-month option to purchase the Hall Tonopah Property. The Company extended the option agreement with High Desert with payments of \$75,000 in June, 2005 and \$100,000 in August of 2005. The option to purchase the Hall Tonopah Property was subsequently extended to March 17, 2006 with an \$80,000 payment paid on January 17, 2006. On March 17, 2006, the Company entered into a purchase agreement with High Desert whereby it purchased a substantial portion of the Hall Tonopah Property. At closing, the Company paid High Desert a cash payment of approximately \$4.5 million for the portion of the Hall Tonopah Property that it purchased and made a deferred payment of \$989,789 in November of 2006 for the purchase of the remaining portion of this property for the total purchase price of \$5,449,616 including \$32,698 in buildings and equipment at the Hall Tonopah site. The primary purpose of the Hall Tonopah purchase was to further the Company s strategy of exploring and developing potential Molybdenum properties. The buildings and improvements to the property were valued at \$32,698 based on a previous recent transaction at the property, and the remaining amount was allocated to the land. At December 31, 2006 and 2005 the Hall Tonopah property was subject to a 12% royalty payable with respect to the net revenues generated from molybdenum or copper minerals removed from the properties purchased. Subsequent to December 31, 2006, the Company acquired the entity that possessed this royalty right. See Note 12 Subsequent Events.

In April 2006, the Company entered into a letter of intent to purchase certain patented lode mining claims referred to as the Liberty Claims on property adjacent to Hall Tonopah property for cash of \$75,000 and 150,000 shares of restricted common stock. The Company has paid the \$75,000 cash portion of the purchase price and will issue the shares of restricted stock upon completion of the purchase. The \$75,000 is currently recorded as a deposit on the Company's balance sheet.

In July 2006, the Company purchased 1,503 acres of deeded land which includes 70,000 acres of BLM grazing rights and certain water rights known as the Gale Ranch for \$1,869,373. This ranch is located near the Mount Hope mine site. The primary reason for the purchase of this asset was to acquire the water rights of 1,200 acre feet for use by the Mount Hope operations. The Company paid \$54,982 for the water rights and the remaining amount was used to purchase the land and the grazing rights.

In November 2006, the Company purchased from Atlas Precious Metals, Inc. patented millsite claims for \$32,090, water rights for \$42,787, fee land in Eureka, Nevada \$26,740 with improvements of \$5,350 and 150,000 shares of Atlas Precious Metals, Inc. restricted common stock valued at \$2.00 per share plus closing costs at \$320,900. This investment was written off and recorded at a fair value of zero for financial reporting purposes. The total capitalized value related to water rights, millsite and fee land is in the amount of \$106,967. The primary purpose of this purchase was to acquire the water rights of 1,448 acre feet for the Mount Hope operation.

During the year ended December 31, 2005, the Company purchased acreage at the Turner Gold project for \$415,462.

The Company's mining claims and land purchased prior to 2006 consist in part of (a) approximately 107 acres of fee simple land in the Pine Creek area of Shoshone County, Idaho, (b) six patented mining claims known as Chicago-London group, located near the town of Murray in Shoshone County, Idaho, (c) 265 acres of private land with 3 unpatented claims in Josephine County, Oregon, known as the Turner Gold project.

Edgar Filing: IDAHO GENERAL MINES INC - Form 10KSB

Capital assets are recorded at cost. Depreciation is calculated using the straight-line method over three to 20 years. The following is a summary of property, equipment, and accumulated depreciation at December 31, 2006:

	Cost	Accumulated Depreciation	Net Book Value 2006	Net Book Value 2005
Depreciable Capital Assets:				
Field Equipment	\$ 15,544	\$ 2,019	\$ 13,525	\$ 5,338
Vehicles	185,951	32,330	153,621	13,976
Office Furniture	32,327	8,593	23,734	17,357
Computer Equipment	211,680	26,193	185,487	16,662
Leasehold Improvements	20,110	1,117	18,993	
Imp. to Fee Land in Eureka	5,350	45	5,305	
Bldg & Equip Hall Tonopah	32,698	2,725	29,973	
Total Depreciable Assets	503,660	73,022	430,638	53,333
Non Depreciable Capital Assets:				
Pine Creek Land	1,450		1,450	1,450
Chicago-London Group	80,001		80,001	80,001
Turner Gold Land	415,462		415,462	415,462
Hall Tonopah Property	5,416,918		5,416,918	
Fee Land Eureka, Nevada	26,740		26,740	
Atlas Water Rights & Millsite Claims	74,877		74,877	
Gale Ranch & Water Rights	1,869,373		1,869,373	
Total Non Depreciable Assets	7,884,821		7,884,821	496,913
Total Capital Assets	\$ 8,388,481	\$ 73,022	\$ 8,315,459	\$ 550,246

Total depreciation expense for the years ending December 31, 2006 and 2005 is \$57,578 and \$11,215

NOTE 5 RELATED PARTY TRANSACTIONS

On August 16, 2006 the Company entered into an employment agreement effective August 14, 2006 with Andrew J. Russell, a son of the Company's former President and CEO, for services as Senior Manager Permitting and Technical. Under this agreement, Andrew J. Russell is paid \$150,000 per year and was granted a stock option to purchase 60,000 shares at \$2.10 per share at the closing price of the Company's stock on August 15, 2006.

At December 31, 2005 the Company had an employee receivable in the amount of \$9,000 for cash advances to a Company corporate officer for expenses and salary. This amount was fully repaid during the three months ended March 31, 2006.

The Company paid professional service fees of \$35,319 during the year ended December 31, 2005, to the Company's legal counsel, who is a shareholder and also serves as the Company's secretary/treasurer.

The Company paid consultant fees of \$49,060 during the year ended December 31, 2004 to the son of the Company president, for services provided.

Additional related party transactions are included as part of Note 8.

NOTE 6 COMMON STOCK

During the year ended December 31, 2006, the Company had two private placements of their stock. In these private placements, the Company issued 18,021,936 shares of common stock with warrants for cash of \$33,324,130 less placement agent and finder's fees of \$2,513,383 and issued 170,550 shares of common stock for finder's fees valued at \$187,605. The Company issued 1,482,147 shares of common stock for the cashless exercise of warrants and 1,008,837 shares of common stock for the cashless exercise of stock options. Warrants and options in the amount of 5,090,833 and 340,000 were exercised for cash in the amount of \$4,109,833 and \$57,427 respectively, less combined brokerage fees of \$230,684. The Company issued 50,000 shares of common stock for services valued at \$120,250.

During the year ended December 31, 2005, the Company issued 3,853,932 shares of common stock for cash of \$3,059,198, issued 128,482 shares of common stock for services valued at \$135,828, issued 20,000 shares of common stock for management valued at \$23,500, issued 15,000 shares of common stock for property valued at \$10,800, and issued 30,000 shares of stock for property valued at \$28,500. Additionally, upon the cashless exercise of options, the Company issued 988,630 shares of common stock. In April 2005, the Company, pursuant to the adoption of a shareholder rights agreement declared a dividend of one right for every common stock share held. The right is exercisable at \$1.03 until December 31, 2007. The exercise price of the right is subject to adjustment.

During 2004, the board of directors and shareholders adopted amended and restated articles of incorporation, which authorized the Company's issuance of 200,000,000 shares of common stock with a \$0.001 par value. Prior to 2004, the Company was authorized to issue 25,000,000 shares of common stock with a par value of \$0.10.

The Company is authorized to issue 200,000,000 shares of common stock. All shares have equal voting rights, are non-assessable and have one vote per share. Voting rights are not cumulative and therefore, the holders of more than 50% of the common stock could, if they choose to do so, elect all of the directors of the Company.

NOTE 7 PREFERRED STOCK

On October 28, 2004, shareholders of the Company authorized 10,000,000 shares of no par value preferred stock. The authorized but unissued shares of preferred stock may be issued in designated series from time to time by one or more resolutions adopted by the board of directors. The directors have the power to determine the preferences, limitations and relative rights of each series of preferred stock.

On November 16, 2004, the board of directors unanimously consented to amend the articles of incorporation of the Company. The amendment reclassified 10,000,000 shares of the Company's no par value preferred stock into 10,000,000 shares of \$0.001 par value Series A preferred stock. At December 31, 2005 and 2006, no shares of \$0.001 par value Series A preferred stock were issued or outstanding.

NOTE 8 COMMON STOCK OPTIONS

During 2006, the board of directors and shareholders adopted the Idaho General Mines, Inc. 2006 Equity Incentive Plan (the "2006 Plan"). During 2004, the board of directors and shareholders adopted the Idaho General Mines, Inc. 2003 Stock Option Plan (the "2003 Plan" and together with the 2006 Plan, the "Plans"). The purpose of the Plans is to give the Company greater ability to attract, retain, and motivate its officers and key employees. The Plans are intended to provide the Company with ability to provide incentives more directly linked to the success of the Company's business and increases in shareholder value.

Under the 2006 Plan, the board of directors is authorized to grant incentive stock options ("ISOs") to employees (pursuant to Internal Revenue Code 422), non-statutory stock options, restricted stock awards, restricted stock units and stock appreciation rights. The aggregate number of shares of common stock that may be issued pursuant to awards granted under the 2006 Plan will not exceed 3,500,000 plus the number of shares that are ungranted and those that are subject to reversion under the 2003 Plan. As of December 31, 2006, the maximum number of shares available for issuance under the 2003 Plan was 360,000 shares. Shares under the 2003 Plan that become eligible for awards under the 2006 Plan may not be granted again under the 2003 Plan.

During the year ended December 31, 2006, the Company granted 1,665,000 non-qualified stock options outside of the Plans with an exercise price ranging from \$2.25 to \$3.68 with vesting at various dates through 2008. These options were granted to members of the board of directors, officers, and employees of the Company. No options or stock grants were made under the 2006 Plan during the year ended December 31, 2006. The Company issued 60,000 of ISOs within the 2003 Plan with an exercise price of \$2.10 with vesting at various dates through 2008. The fair value of each option is estimated on the issue date using the Black-Scholes Option Price Calculation. The following assumptions were made in estimating the fair value: risk free interest of 5%; volatility of 101%; dividend rate of 0% and expected life of 2.4 years. The total value of options awarded during 2006 was calculated at \$3,346,975. Expense was recorded of \$2,325,500 for the options which vested in 2006.

During the year ended December 31, 2005, the Company granted 950,000 incentive stock options (enabling the option holders to purchase 950,000 shares of common stock) under the 2003 Plan with an exercise price of \$0.72 and vesting at various dates through 2007 with expirations at various dates through 2012. These options were granted to officers and employees. The fair value of each option is estimated on the issue date using the Black-Scholes Option Price Calculation. The following assumptions were made in estimating fair value: risk free interest of 4%; volatility of 73%; dividend rate of 0%; and expected life of 2 years. The total value was calculated at \$307,800. Expense was recorded of \$113,400 for the ISOs, which vested in first quarter of 2005.

During the year ended December 31, 2004, the Company granted 1,485,000 non-qualified stock options outside of the 2003 Plan and 1,910,000 incentive stock options under the 2003 Plan with exercise prices ranging from \$0.15 to \$0.75 and expirations at various dates through 2011. These options were granted to officers, directors, and other related parties. The fair value of each option is estimated on the issue date using the Black-Scholes Option Price Calculation. The following assumptions were made in estimating fair value: risk free interest rate of 4%; volatility of 46%; dividend rate of 0%; and expected life of 2 years. The total value was calculated at \$302,775. Expense was recorded of \$19,350 for the ISOs, which vested in the first quarter of 2005. Expense was recorded for \$11,750 for the ISOs, which vested in the third quarter of 2005.

The following is a summary of the Company's stock option plans as of December 31, 2006:

	Number of securities to be issued upon exercise of outstanding options	Weighted average exercise price of outstanding options	Number of securities remaining available for future issuance under equity compensation plans
Equity compensation plans not approved by security holders	3,110,000	\$ 1.58	n/a
Equity compensation plans approved by security holders:			
2006 Plan			3,500,000 (1)
2003 Plan	540,000	0.59	360,000
Total	3,650,000	\$ 1.44	3,860,000

(1) The aggregate number of shares of common stock that may be issued pursuant to awards granted under the 2006 Equity Incentive Plan will not exceed 3,500,000 plus the number of shares that are ungranted and those that are subject to reversion under 2003 Stock Plan. Shares under the 2003 Plan that become eligible for awards under the 2006 Plan may not be granted again under the 2003 Plan.

The following is a summary of stock option activity in 2004, 2005 and 2006:

	Number of Shares Under Options	Weighted Average Exercise Price
Outstanding January 1, 2004	1,150,000	\$0.11
Granted	3,395,000	0.38
Exercised	260,000	0.11
Forfeited		
Expired		
Outstanding at December 31, 2004	4,285,000	\$0.33
Options exercisable at December 31, 2004	3,315,000	
Weighted average fair value of options granted during 2004	\$0.14	
Outstanding January 1, 2005	4,285,000	\$ 0.33
Granted	950,000	0.72
Exercised	1,215,000	0.25
Forfeited		
Expired		
Outstanding December 31, 2005	4,020,000	\$ 0.43
Exercisable at December 31, 2005	3,030,000	
Weighted Average Fair Value Granted During 2005	\$ 0.32	
Outstanding January 1, 2006	4,020,000	\$ 0.43
Granted	1,725,000	3.01
Exercised	1,615,000	0.49
Forfeited	480,000	
Expired		
Outstanding December 31, 2006	3,650,000	\$ 1.48
Exercisable at December 31, 2006	2,705,000	
Weighted Average Fair Value Granted During 2006	\$ 3.10	
Fair Market Values & Number of Options	\$ 2.53	

NOTE 9 COMMON STOCK WARRANTS

During the year ended December 31, 2006, the Company granted 1,596,243 common stock warrants (in conjunction with the issuance of common stock) with an exercise price of \$1.75, 85,275 of these warrants are attached to 170,550 shares of stock issued as fee for private placement number 4. Also the Company granted 8,300,000 common stock warrants (in conjunction with the issuance of common stock) with an exercise price of \$3.75; these common stock warrants expire at various dates through 2012. The Company issued 75,000 warrants in exchange for services with a value of \$56,778. The fair value of the warrants were estimated using the Black-Scholes Option Price Calculation.

During the year ended December 31, 2005, the Company granted 2,998,932 common stock warrants (attached to common stock) with an exercise price of \$1.00 per share and granted 210,000 common stock warrants with an exercise price of \$1.75 per share and both having an expiration date of two years. The fair value of each option is estimated using the Black-Scholes Option Price Calculation. The following assumptions were made in estimating fair value: risk free interest of 4%; volatility of 73%; dividend rate of 0%; and expected life of two years. The total value of these warrants was estimated at \$758,148 and \$64,767 respectively.

NOTE 10 INCOME TAXES

At December 31, 2006, 2005 and 2004 the Company had deferred tax assets principally arising from the net operating loss carry forwards for income tax purposes multiplied by an expected rate of 34%. As management of the Company cannot determine that it is more likely than not that the Company will realize the benefit of the deferred tax assets, a valuation allowance equal to the deferred tax asset has been established at December 31, 2006, December 31, 2005, and December 31, 2004. The significant components of the deferred tax asset at December 31, 2006, 2005 and 2006 were as follows:

	December 31, 2006	December 31, 2005	December 31, 2004
Net operating loss carry forward	\$ 8,425,000	\$ 3,150,000	\$ 1,030,000
Deferred tax asset	\$ 2,865,000	\$ 1,071,000	\$ 305,000
Deferred tax asset valuation allowance	\$ (2,865,000)	\$ (1,071,000)	\$ (305,000)
Net deferred tax asset	\$	\$	\$

At December 31, 2006, 2005 and 2004 the Company had a net operating loss carry forwards of approximately \$8,425,000, \$3,150,000, and \$1,030,000 respectively, which expire in the years 2022 through 2026. The change in the allowance account from December 31, 2005 to December 31, 2006 was \$1,794,000 and the change between December 31, 2005 and December 31, 2004 was \$766,000.

NOTE 11 COMMITMENTS AND CONTINGENCIES

In December 2006, the Company entered into a five year capital leases to for office equipment. The Company in December 2006 also entered into a note to purchase a 2007 1 ton pickup for \$33,571 at an interest rate of 0.9% and with a term of three years. The table below shows these obligations over the next five years.

Year	Lease Payment	Interest on Leases	Note Payment	Note Interest
2006	\$ 834	\$ 193		
2007	10,008	2,095	11,350	256
2008	10,008	1,670	11,350	156
2009	10,008	1,220	11,350	55
2010	10,008	744		
2011	9,174	240		
Total	\$ 50,040	\$ 6,163	\$ 34,050	\$ 468

Set forth below is a schedule of the Company's contractual obligations for payments under the Mount Hope lease agreement:

Contractual Obligations for Future Payments under Mount Hope Lease

Date	Fixed Payment	Project Financing Received by Date Indicated	Project Financing Not Received and Deferral Elected
April 19, 2007	\$125,000		
October 19, 2007	\$350,000		
October 19, 2008		Greater of 3% of Construction Capital Cost Estimate or \$2,500,000(1)(3)(4)	\$350,000
October 19, 2009		Greater of 3% of Construction Capital Cost Estimate or \$2,500,000(1)(3)(4)	\$350,000
October 19, 2010		\$2,500,000(3)	Greater of \$2,500,000 or 3% of Construction Capital Cost Estimate(3)(4)
October 19, 2011		3% of Construction Capital Cost Estimate(3)(4)	Greater of (a) \$2,500,000 or (b), if 3% of Construction Capital Cost Estimate is greater than \$2,500,000, then 50% of the difference between 3% and \$2,500,000(3)(4)
October 19, 2012		3% of Construction Capital Cost Estimate(3)(4)	Greater of (a) \$2,500,000 or (b), if 3% of Construction Capital Cost Estimate is greater than \$2,500,000, then 50% of the difference between 3% and \$2,500,000(3)(4)
October 19, 2013 and each year thereafter(3)	\$500,000(3)		

(1) If Project Financing is not received by October 19, 2008, the Company may elect to defer this payment and proceed to make the payments under the column labeled "Project Financing Not Received and Deferral Elected." If prior to making all of the payments under the column "Project Financing Not Received and Deferral Elected" the Company obtains project financing, the Company would be required to make this payment and to pay \$500,000 each year thereafter.

(2) In addition to the payments above, the Company is required to pay to MHMI a production royalty after the commencement of Commercial Production of the greater of (i) \$.20/lb of molybdenum metal (or the equivalent

thereof if another Product is sold) sold from the property (not to exceed the amount of Net Returns we receive for those products) or (ii) 3% of the Net Returns, subject to certain adjustments as set forth in the lease.

(3) To be offset from the production royalty described in (3) above. The Company may recover the aggregate of these payments by retaining 50% of each production royalty payment due to MHMI.

(4) Construction Capital Cost Estimate means the Company's projected costs plus 10% to put the Mount Hope property into commercial production.

Environmental Considerations:

The Company owns and has owned mineral property interests on certain public and private lands in Shoshone County, Idaho. The Company's mineral property holdings include lands contained in mining districts that have been designated as Superfund sites pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The Company and its properties have been and are subject to a variety of federal and state regulations governing land use and environmental matters. The Company believes it has been in substantial compliance with all such regulations, and is unaware of any pending action or proceeding action relating to regulatory matters that would affect the financial position of the Company. The Company's management acknowledges, however, that the possibility exists that the Company may be subject to environmental liabilities associated with its properties in the future, and that the amount and nature of any liabilities the Company may be held responsible for is impossible to estimate.

NOTE 12 SUBSEQUENT EVENTS

On January 30, 2007, the Company purchased 100% of the Stock in Equatorial Mining North America, Inc. and its two subsidiaries, which owned a 12% net smelter returns royalty on the Hall-Tonopah property, from Equatorial Mining Pty. Limited. The consideration paid for the Equatorial acquisition was \$4.85 million with an additional deferred payment of \$6 million due upon commercial operation of the property. The acquisition included the royalty as well as \$1.24 million in cash accounts and the assumption of all environmental liabilities on the reclaimed site.

On January 30, 2007 the Company entered into an employment contract with Bruce Hansen to become the Company's new CEO. The base salary for Mr. Hansen is \$350,000 per year. In addition, Mr. Hansen received a stock option to purchase 750,000 shares and 250,000 shares of restricted stock. He will also receive \$1,000,000 in incentive pay if the goals set for Mr. Hansen are achieved.

On March 2, 2007, the Company purchased the Florence patented lode mining claim for \$175,000 cash. This claim is adjacent to the Hall Tonopah property.

On March 23, 2007, the Company purchased certain patented lode mining claims referred to as the Liberty Claims on property adjacent to Hall Tonopah property for cash of \$75,000 and 150,000 shares of restricted common stock.

The Company is engaged in negotiations to purchase additional land and water rights for its Mount Hope project. On March 8, 2007, we paid \$200,000 as earnest money on one of the expected acquisitions.

ITEM 8. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not applicable.

ITEM 8A. CONTROLS AND PROCEDURES

An evaluation was performed under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, of the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934) as of the end of the period covered by this Annual Report on Form 10-KSB. Based on that evaluation, we made certain changes in our disclosure controls and procedures relating to our equity register and process for administration of our stock option plan and warrants. Upon implementation of these changes, our senior management, including our principal executive officer and principal financial officer, concluded that our disclosure controls and procedures will be effective to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission rules and forms and such information is accumulated and communicated to our management, including our principal executive officer and principal financial officer, to allow timely decisions regarding required disclosure.

During the fourth quarter of 2006, we began a process to enhance our disclosure controls and procedures and our internal control over financial reporting. This process included the hiring of outside financial consultants to help us evaluate the effectiveness of our controls and procedures as well as the retention of a new stock transfer agent. As a result of this process, we made changes during the quarter ended December 31, 2006 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. These changes included improvements to our processes for properly calculating and recording stock option and warrant exercises (and related compensation expense) and to help ensure that the related tax withholding obligations of the Company are satisfied.

The Company intends to continually review and evaluate the design and effectiveness of our disclosure controls and procedures as well as our internal control over financial reporting to improve our controls and procedures over time as the Company's business transitions into mining operations and to correct any deficiencies that we may discover in the future. The Company anticipates that additional changes to our internal control and procedures will be made as we takes steps to become compliant with Section 404 of the Sarbanes-Oxley Act of 2002, which we anticipates will apply for our annual report for the year ended December 31, 2007.

Inherent Limitations on Effectiveness of Internal Controls

The Company's management, including the Chief Executive Officer and Chief Financial Officer, do not expect that our disclosure controls or our internal control over financial reporting will prevent or detect all errors and all fraud that could occur. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood

of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

ITEM 8B. OTHER INFORMATION

None.

PART III

ITEM 9. DIRECTORS, EXECUTIVE OFFICERS, PROMOTERS, CONTROL PERSONS AND CORPORATE GOVERNANCE; COMPLIANCE WITH SECTION 16(a) OF THE EXCHANGE ACT

The following table provides the names, positions and ages of our directors and officers:

Name	Age	Position
Robert L. Russell	73	Executive Director and Chairman of the Board
Bruce D. Hansen	49	Chief Executive Officer and Director
John B. Benjamin (1)	77	Director
Gene W. Pierson (2)	69	Director
Norman A. Radford (1)(3)	74	Director
R. David Russell (2)	49	Director
Richard Nanna (3)	57	Director
R. Lee Chapman (1)(3)(4)	49	Director
Ricardo M. Campoy (1)(3)	56	Director
Robert L. Dumont	51	Vice President Business Strategies and Investor Relations, Acting CFO
Michael K. Branstetter	53	Secretary, Treasurer and Legal Counsel

- (1) Member of Audit & Finance Committee.
- (2) Member of Nominating Committee.
- (3) Member of Compensation Committee.
- (4) Mr. Chapman has informed us that he will resign from the Board effective March 31, 2007.

We have no knowledge of any arrangements, including any pledge by any person of our securities, the operation of which may at a subsequent date result in a change in our control. We are not, to the best of our knowledge, directly or indirectly owned or controlled by another corporation or foreign government.

The term of office of the directors is for one year and until their successors are elected. Officers are appointed annually by the board of directors and serve at the pleasure of the board.

Robert L. Russell, a professional engineer, has been a director of our company since 1967, and served as our President and Treasurer from 1979 to 1980, our President and Chief Executive Officer from 1984 to 2007, and has been our Chairman and Executive Director since 2007. Mr. Russell held positions with Exxon Minerals from 1976 to 1984 and Freeport-McMoRan Copper & Gold, Inc. where he served as Vice President of Mining from 1988 to 1995. Mr. Russell was Executive Vice President and General Manager of Freeport's Indonesian operations, responsible for the overall operations, including 8,000 employees, and the construction of \$1.5 billion of capital facilities. From 1995 to 1998, Mr. Russell was employed by Zambia Consolidated Copper Mines, most recently as General Manager of the Nchanga Division. In that

position, Mr. Russell was responsible for all functions of two operating mines and several metallurgical facilities. Mr. Russell is a director of Mines Management, Inc.

Bruce D. Hansen has been our Chief Executive Officer and a director of our company since 2007. From September 2005 until he joined us in January 2007, Mr. Hansen served as Senior Vice President, Operations Services and Development at Newmont Mining Corporation. Prior to that, Mr. Hansen served as Senior Vice President and Chief Financial Officer at Newmont Mining Corporation from July 1999 to September 2005.

John B. Benjamin has been a director of our company since 1974. Mr. Benjamin has been retired since 1989. Prior to that time, Mr. Benjamin was employed from 1987 to 1989 by Dames & Moore, a Denver, Colorado based engineering company as a field sampling and air/water monitoring coordinator assistant for The Bunker Hill Superfund Remedial Investigation and Feasibility Study. Before joining Dames & Moore, Mr. Benjamin was employed by the Bunker Hill Company for approximately 27 years.

Gene W. Pierson, a mining engineer, has been a director of our company since 2002. Mr. Pierson graduated from the University of Texas, El Paso, with a Bachelor of Science degree in mining engineering, geology option, June 1962. Since 1999, Mr. Pierson has been a self-employed consultant for mining companies in mineral economics and management. From 1981 to 1999, Mr. Pierson was employed by Hecla Mining Company as a senior analyst performing research and analytical work with management, engineering, metallurgical, geology, accounting and financial staff. Mr. Pierson is a member of the Society of Mining Engineers and the Mineral Economics & Management Society.

Norman A. Radford, a mining engineer, has been a director of our company since 2002. Mr. Radford graduated from the University of Idaho with a Bachelor of Science degree. From 1982 to 1985, Mr. Radford was employed by Coeur d'Alene Mines Corporation as a consulting geologist providing full time consulting services to the chairman of the board. From 1965 to 1982, Mr. Radford was employed by The Bunker Hill Company as a senior mine geologist. Mr. Radford is a registered professional geologist and a member of the American Institute of Mining Engineers. Mr. Radford has been semi-retired since 1985 and has run a jewelry store since that year.

R. David Russell has been the President & CEO/director of the Canadian gold company Apollo Gold Corporation (Apollo Gold) since 2002, which is listed on the TSX and on AMEX and has been a director of our company since 2002. In 1999, Mr. Russell founded Nevoro Gold Corporation which was subsequently merged with Apollo Gold. From 1994 to 1999, Mr. Russell was Vice President and Chief Operating Officer for Getchell Gold Corporation (Getchell), a Nevada gold producer. Mr. Russell oversaw the Getchell open pit as well as the development of two underground mechanized gold mines and a complex pressure oxidation mill for gold ore processing. Prior to Getchell, Mr. Russell was General Manager, US operations, for LAC Minerals Ltd. and after their acquisition, Barrick Gold Corporation (collectively, LAC/Barrick). His responsibilities included operations at various mines in the western US including the Bullfrog mine in Nevada, the Richmond Hill Mine located near Lead, South Dakota, the Ortiz Project near Santa Fe, New Mexico, and the Coliseum reclamation project in California. Prior to LAC/Barrick, Mr. Russell was manager of underground mining for the Independence Mining Company Inc. in Nevada, project manager for Hecla Mining Company in Idaho, manager of the Lincoln Project in California for our company/Meridian Gold Inc. / US energy and mine manager for ASARCO LLC in Idaho and Colorado. Mr. Russell is a BS Mining Engineering graduate from Montana Tech. Mr. Russell is the son of our Executive Director and Chairman of the Board, Robert L Russell.

Richard F. Nanna has been a director of our company since 2003 and he is Vice President Exploration for Apollo Gold and has been a director of our company since 2003. Mr. Nanna is responsible for managing all aspects of exploration and geology for the two major operating gold mines of Apollo Gold as well as all exploration for new properties. Mr. Nanna was Vice President of Exploration in Nevada for Getchell from 1994 to 1999, where he was responsible

for discovering over 18 million ounces of gold. This

69

property is being further developed by Placer Dome Inc. Mr. Nanna attended the University of Akron from 1972 to 1978, where he received bachelor and masters of science degrees in geology. Mr. Nanna has been an instructor in undergraduate geological studies at that institution. Mr. Nanna is experienced in working with investment bankers and has experience in the areas of acquisition, valuation, and sales of mineral properties for the various companies for which he has worked.

R. Llee Chapman has been a director of our company since 2004 and he is a seasoned financial executive with 24 years of experience with some of the world's largest natural resource and engineering companies and has been a director of our company since 2004. Mr. Chapman served as Vice President and Chief Financial Officer for Apollo Gold from 2002 until March 2005. Mr. Chapman is a certified public accountant licensed in two states, a former Elko County Commissioner and Chairman, and current President of the Northwest Mining Association. Mr. Chapman has been an independent mining consultant since March 2005 and is currently employed by Ascendant Copper Corporation.

Ricardo M. Campoy has been a director of our company since August 2006. Mr. Campoy has worked as an international natural resources banker for twenty-six years, having served in executive finance positions at various firms, including as Head of Mining & Metals of WestLB AG and as Member/Senior Advisor of McFarland Dewey & Co., LLC. Prior to Mr. Campoy's work in finance, he was employed as a mining engineer. Mr. Campoy is currently in private practice as a financial and corporate advisor to the natural resources industry.

Robert L. Dumont is our Executive Vice President Business Strategies and Development and acting Chief Financial Officer. From January 2005 until April 2006, he served as our Vice President of Business Development and acting Chief Financial Officer. Prior to joining our company, Mr. Dumont was the managing partner of Atmos Management Group which specializes in strategic and financial business management. From 1996 to 1998, Mr. Dumont was the managing partner of Dumont Partners, a private investment partnership, based in Greenwich, Connecticut. From 1992 to 1996, Mr. Dumont was an equity portfolio manager for Morgens, Waterfall, Vintiadis & Company, Inc., a private investment partnership, based in New York, New York. From 1988 to 1992, Mr. Dumont was head of strategic investments for Whitehead Associates, a private investment group focused on public and private investments, based in Greenwich, Connecticut. Prior to Whitehead Associates, Mr. Dumont was employed as senior equity portfolio manager for The Selzer Group, New York, New York, a merchant banking firm. Prior to The Selzer Group, Mr. Dumont was a mineral economics analyst for Chase Manhattan Bank, N.A., New York, New York. Mr. Dumont holds a bachelor of science degree in mining engineering from the University of Idaho and has completed post graduate studies in Accounting, Finance, and Economics.

Michael K. Branstetter has served as our Secretary and Treasurer since 1992, and acts as our corporate counsel. Mr. Branstetter is the principal of Hull & Branstetter Chartered, a law firm in Idaho.

Audit and Finance Committee

Our Audit and Finance Committee members are: R. Llee Chapman, Chairman, Norman A. Radford and John B. Benjamin, all being independent directors in accordance with the listing standards of the American Stock Exchange (AMEX). Mr. Chapman is deemed the committee's financial expert.

Section 16(a) Beneficial Ownership Reporting Compliance

Section 16(a) of the Securities Exchange Act of 1934 requires our officers, directors, and any person who beneficially owns more than 10% of our common stock to file reports of ownership and changes in ownership with the Securities and Exchange Commission. Executive officers, directors, and more than 10% shareholders are required by regulation to furnish us with copies of all Section 16(a) forms which they file. During 2006, certain of our directors and executive officers who own our stock filed Forms 3 or Forms 4 with the Securities and Exchange Commission. The information on these filings reflects the current

ownership position of all such individuals. To the best of our knowledge, during 2006 all such filings by our officers and directors were made timely, except that due to an administrative error in each instance, Forms 4 were not filed in a timely manner for the following officers and directors: John B. Benjamin (one filing disclosing one transaction); R. Llee Chapman (two filings disclosing two transactions), Gene W. Pierson (one filing disclosing one transaction); Norman A. Radford (one filing disclosing one transaction); Robert Dumont (one filing disclosing two transactions); Richard F. Nanna (one filing disclosing one transaction); Robert David Russell (one filing disclosing two transactions); Robert L. Russell (one filing disclosing one transaction).

Code of Ethics

We have adopted a Code of Conduct and Ethics for our President and Chief Executive Officer and our senior financial officers. A copy of our Code of Conduct and Ethics can be obtained at no cost, by telephone at (509) 838-1213 or by mail at: Idaho General Mines, Inc., N. 10 Post Street, Suite 610, Spokane, Washington, 99201, attention: Investor Relations. We believe our Code of Conduct and Ethics is reasonably designed to deter wrongdoing and promote honest and ethical conduct; provide full, fair, accurate, timely and understandable disclosure in public reports; comply with applicable laws; ensure prompt internal reporting of code violations; and provide accountability for adherence to the code.

ITEM 10. EXECUTIVE COMPENSATION

COMPENSATION DISCUSSION AND ANALYSIS

Introduction

The Compensation Committee of the (the Committee) of our Board of Directors sets total compensation for our executive officers, including the Executive Director, the Chief Executive Officer, the Chief Financial Officer and the Executive Vice President of Business Strategies, Development and Investor Relations. These are our Named Executive Officers who are identified in the tables below.

We are in the early stages of exploring and developing molybdenum dominant projects, including the Mt. Hope and Hall-Tonopah molybdenum deposits in Nevada. We do not have any operations and have relatively few employees. Because of our size and early stage of development, the Committee does not have a broad-based, detailed executive compensation program. Instead, we have a simple executive compensation program that is intended to provide appropriate compensation for our executive officers. The program currently has only three major components: salary, annual bonus and equity-based incentives, such as stock options and restricted stock awards. The program's overall objective is to enable us to obtain and retain the services of skilled executives. The compensation program seeks to enhance our value by aligning the financial interests of our executive officers with those of our shareholders. For example, our equity-based compensation program is designed to retain the individual executive officer and to align his long-term financial interests with those of our shareholders. We also have designed our compensation program to motivate and reward executives whose knowledge, skills and performance are critical to our success.

The compensation program reflects the fact that we operate with a small team of executives. Our executives are each charged with a variety of responsibilities that encompass both our strategic objectives and our day-to-day activities. Compensation depends to a significant extent on the achievement of annual and long-term performance goals.

The compensation packages for our executive officers are designed to promote teamwork as well as individual initiative and achievement. We have entered into employment agreements with each of our executive officers, which are described below. We believe that these employment agreements are necessary to grow the company and to increase our shareholder value. Each employment agreement sets the

compensation for the individual executive officer. In establishing the agreement with each executive officer, the Committee takes into account many factors, including the individual's prior business experience, historical compensation levels, work performance, and retention considerations and our business need for the executive's skills. The Committee also considered input from third party compensation consultants, external market data, and the individual experience of the Committee members.

Elements of Compensation

Our compensation program has three principal elements: salary, annual bonus, and equity-based incentives. The remaining compensation, paid through employee benefits, is not significant in amount or as a percentage of any executive's compensation. Each of these components is discussed further below.

Base Salary. We recognize that paying a reasonable base salary is necessary in order for us to obtain and retain the services of skilled executives. We establish our executives' salaries on consideration of the scope of their responsibilities, taking into account competitive market compensation for similar positions, seniority of the individual, and our ability to replace the individual, as well as the median of the range of salaries for executives in similar positions with similar responsibilities at comparable companies. Base salaries are reviewed annually by the Committee and our Board and may be adjusted pursuant to this annual review. An adjustment to a salary may be made, for example, to align that salary with market levels, taking into account the individual's responsibilities, performance and experience. The salaries of our executive officers were well below the median through 2006, reflecting the underfunding of a startup company. However, salaries were adjusted in 2007 to reflect salaries paid to individuals in operating companies with similar positions and responsibilities.

Discretionary Performance Bonus. Our Board has the authority to award discretionary bonuses to our executive officers based upon their performance and efforts. We believe it is reasonable and necessary to compensate our executive officers with bonus payments for achieving financial, operational and strategic goals. Bonus amounts are intended to reward both achievement of company goals and individual performance. Annual bonuses have traditionally been paid to executive officers to recognize specific accomplishments and overall performance.

Long-Term Equity Incentive Program. We focus on creating long-term value for our shareholders by aligning the financial interests of our executive officers with those of our shareholders, since the price of our stock is the principal factor in shareholder value over time. We believe that stock-based incentives through stock options and restricted stock awards ensure that our executive officers have a continuing stake in our long-term success. We issue stock options to our executive officers under our 2003 Stock Plan and 2006 Equity Incentive Plan and outside of any formal plan. Stock option awards are principally given at the start of employment with vesting complete by the end of the officer's second anniversary of employment.

The Board adopted the 2003 Plan to give us greater ability to attract, retain, and motivate our officers and key employees and is intended to provide us with the ability to provide incentives that are more directly linked to the success of our business and increases in shareholder value. Our Board determined that options issuable pursuant to the 2003 Plan will be utilized solely for the purpose of granting incentive stock options, or ISOs, for employees. Subject to the terms and conditions of the 2003 Plan, the Committee determines the recipients, grant dates, the numbers and types of stock options to be granted and the terms and conditions of the stock options, including the option term, vesting schedule and exercise price.

Our 2006 Plan provides for the grant of ISOs, nonqualified stock options, restricted stock awards, restricted stock units and stock appreciation rights, which may be granted to our employees (including officers), directors and consultants, to retain the services of participants, to secure and retain the services of new members of this group and to provide incentives for such persons to exert maximum efforts for the

success of the company. Each award is subject to an agreement between the company and the recipient of the grant reflecting the terms and conditions of the award. Subject to the terms of the 2006 Plan, the Committee determines recipients, grant dates, the numbers and types of stock awards to be granted and the terms and conditions of the stock awards, including the period of their exercisability and vesting. The Committee also determines the exercise price of options granted, the purchase price for restricted stock and restricted stock units, and, if applicable, the strike price for stock appreciation rights.

Employee Benefits. Our executive officers participate in the same employee benefit programs (health and dental insurance) as other employees, and on the same basis with our other employees.

Timing of Compensation Decisions

Salary adjustments and bonus awards have typically been made at the Committee and Board meetings held in January. Adjustments to salary and bonus awards are based on the individual executive officer's performance in the prior fiscal year and are awarded in January.

Individual Executive Officers

Each executive officer is considered individually in the compensation setting process. In setting cash compensation, the primary factors are the scope of the executive officer's duties and responsibilities, the executive officer's performance of those duties and responsibilities, the executive officer's experience level and tenure with us, and a general evaluation of the competition in the market for skilled executives with the executive officer's experience. Long-term equity incentives are focused largely on retention of our executive officers and matching the financial interests of our executive officers with those of our shareholders.

Summary Compensation Table

The following table sets forth, for the year ended December 31, 2006, compensation paid to our Chief Executive Officer, Chief Financial Officer and Executive Vice President of Business Development (collectively, the Named Executive Officers).

**SUMMARY COMPENSATION TABLE
FOR THE FISCAL YEAR ENDED DECEMBER 31, 2006**

Name and Principal Position	Year	Salary (\$)	Bonus (\$)	Stock Awards (\$)	Option Awards (\$)	All Other Compensation (\$)	Total (\$)
Robert L. Russell, President and Chief Executive Officer(1)	2006	\$ 220,750	\$ 346,154 (4)		\$ 81,020		\$ 647,924
Henry A. Miller, Senior Counsel and Chief Financial Officer(2)	2006	\$ 212,128			\$ 817,507		\$ 1,029,635
Robert L. Dumont, Executive Vice President of Business Development, acting Chief Financial Officer(3)	2006	\$ 166,000	\$ 197,368 (4)	(4)	\$ 43,754		\$ 407,122

(1) As of January 30, 2007, Mr. Russell no longer serves as President and Chief Executive Officer, but rather as Executive Director.

(2) Mr. Miller served as Senior Counsel and Chief Financial Officer until December 13, 2006, and his employment terminated on January 30, 2007.

(3) Mr. Dumont served as Executive Vice President of Business Development during 2006, and additionally has served as V.P. of Finance and acting Chief Financial Officer from December 13, 2006.

(4) Does not include payments and stock based awards made in 2007 for services rendered in 2006 because such payments were not awards under a non-equity incentive plan within the meaning of Item 402 of Regulation S-K.

Grant of Plan-Based Awards

The following table sets forth information concerning individual grants of plan-based awards made during the year ended December 31, 2006 to the Named Executive Officers.

GRANTS OF PLAN-BASED AWARDS

Name	Grant Date	All Other Stock Awards: Number of Shares or Stock or Units(1) (#)	All Other Option Awards: Number of Securities Underlying Options (#)	Exercise or Base Price of Option Awards(2) (\$ / Sh)	Closing Price on Grant Date (\$ / Sh)	Grant Date Fair Value of Stock and Option Awards(3) (\$)
Robert L. Russell, President and Chief Executive Officer(4)	04/05/2006	50,000		\$ 2.80	\$ 2.80	\$ 81,020
Henry A. Miller, Senior Counsel and Chief Financial Officer(5)	04/21/2006	600,000		\$ 3.32	\$ 3.32	\$ 817,507
Robert L. Dumont, Executive Vice President of Business Development, acting Chief Financial Officer						

(1) Awards have been made under the Idaho General Mines, Inc. 2003 Stock Plan and outside of any plan.

(2) Exercise or base price is determined by the closing market price of the stock on the day before the grant date.

Edgar Filing: IDAHO GENERAL MINES INC - Form 10KSB

- (3) The fair value is calculated using the Black Scholes value on the grant date.
- (4) Stock option was made to Mr. Russell in his capacity as a director, and vests immediately upon grant.
- (5) Stock option was granted at the start of employment, all of which vested upon his termination of employment on January 30, 2007.

74

Outstanding Equity Awards at Fiscal Year-End

The following table sets forth information concerning year-end number and value of unexercised options, stock that has not vested and equity incentive plan awards for each of the Named Executive Officers.

OUTSTANDING EQUITY AWARDS AT FISCAL YEAR-END

Name	Option Awards		Option Exercise Price (\$)	Option Expiration Date	Stock Awards	
	Number of Securities Underlying Unexercised Options (#) Exercisable	Number of Securities Underlying Unexercised Options (#) Unexercisable			Number of Shares or Units of Stock That Have Not Vested (#)	Market Value of Shares or Units of Stock That Have Not Vested (\$)
Robert L. Russell, President and Chief Executive Officer	250,000		\$ 0.15	03/16/2011		
	50,000		\$0.44	09/27/2009		
	20,000		\$0.75	01/12/2009		
	100,000		\$0.75	11/11/2009		
	50,000		\$2.80	04/05/2011		
Henry A. Miller, Senior Counsel and Chief Financial Officer(1)	200,000	200,000	\$ 3.32	04/20/2011		
		200,000	\$3.32	04/20/2012		
			\$3.32	04/20/2013		
Robert L. Dumont, Executive Vice President of Business Development, acting Chief Financial Officer		200,000	\$ 0.72	01/01/2012		

(1) All of the unexercisable options vested upon termination of Mr. Miller's employment on January 30, 2007 and all of the options expire 90 days after such date.

Option Exercises and Stock Vested

The following table sets forth information concerning each exercise of stock options and stock vested for the year ended December 31, 2006 for each of the Named Executive Officers.

OPTION EXERCISES AND STOCK VESTED

Name	Option Awards		Stock Awards	Value Realized on Vesting (\$)
	Number of Shares Acquired on Exercise (#)	Value Realized on Exercise (\$)	Number of Shares Acquired on Vesting (#)	
Robert L. Russell, President and Chief Executive Officer				
Henry A. Miller, Senior Counsel and Chief Financial Officer				
Robert L. Dumont, Executive Vice President of Business Development, acting Chief Financial Officer	450,000	\$ 1,116,000		

Potential Payments Upon Termination or Change-In-Control

Potential payments upon termination or change in control for Mr. Russell and Mr. Dumont are set forth in their respective employment agreements, described below. Mr. Miller's employment terminated on January 30, 2007. Upon termination, Mr. Miller was paid two times his annual salary plus an amount to cover taxes, totaling \$543,275.

In addition, in the event of a change in control as defined in the 2003 Option Plan and 2006 Equity Incentive Plan, all outstanding options and other awards under the 2006 Plan may be assumed, continued or substituted for by any surviving or acquiring entity. If the surviving or acquiring entity elects not to assume, continue or substitute for such awards, the vesting of such awards held by award holders whose service with us or any of our affiliates has not terminated will be accelerated and such awards will be fully vested and exercisable immediately prior to the consummation of such transaction, and the stock awards shall automatically terminate upon consummation of such transaction if not exercised prior to such event.

Employment Agreements

The following is a summary of the employment agreements that were in effect between us and each of the Named Executive Officers during the last fiscal year. In January 2007, we entered into amended and restated employment agreements with two of our Named Executive Officers and with Bruce D. Hansen who was elected as our Chief Executive Officer. These agreements are also summarized below.

Robert L. Russell

On March 31, 2005, we entered into an employment agreement with Robert L. Russell to serve as our President and Chief Executive Officer for a term of three years. The agreement provided that Mr. Russell would be paid a base salary of \$180,000 per year, subject to annual increases at the discretion of the Board. In March 2006, Mr. Russell's annual base salary was adjusted to \$225,000 as a result of meeting corporate funding goals. In addition to base salary, Mr. Russell was eligible to receive a discretionary cash performance bonus in an amount, if any, as determined by the Board in its sole discretion. If a change of control occurred, Mr. Russell would have been entitled to a bonus of not less than 30% of his base salary and any unvested stock options or restricted stock would vest immediately. In addition, upon a change of control Mr. Russell would have been entitled to a stock appreciation award that is equal to the stake that he holds at the time of the change of control. Upon termination without cause, all unvested stock options would have vested immediately and Mr. Russell would have been entitled to thirty-six months' salary and a bonus that is the greater of 100% of the target bonus for the year or any bonus earned for each year in the prior twenty-four month period.

On January 30, 2007, we entered into an amended and restated employment agreement with Mr. Russell, under which he serves as our Executive Director, for a term of two years, and continues to serve as the Chairman of the Board. Under this agreement, Mr. Russell is paid an annual base salary of \$350,000, subject to annual review and adjustment by the Board. Mr. Russell is also eligible to receive a discretionary cash performance bonus in an amount, if any, as determined by the Board in its sole discretion. Pursuant to the employment agreement, any outstanding unvested stock options and awards held by Mr. Russell become fully vested at the end of the term of this agreement. If a change of control occurs, Mr. Russell will be entitled to three years of annual base salary and all unvested stock options and awards will become vested. In addition, upon contemplation of a change of control event, Mr. Russell will be entitled to receive a stock grant of 1,000,000 shares of common stock, issuable upon the closing of the change of control. If Mr. Russell terminates his employment for "Good Reason," which is defined as the good faith determination by Mr. Russell that he has been constructively discharged by the Company, which shall include, without limitation, relocation of the corporate headquarters or a decline in Mr. Russell's health such that he cannot fulfill the services assigned to him under the agreement, Mr. Russell is entitled

to his annual base salary and any declared bonus as of the date of termination, together with the compensation he would receive under a change of control (described above) and all unvested stock options and awards will vest immediately.

Henry A. Miller

On April 21, 2006, we entered into an employment agreement with Henry A. Miller to serve as our Chief Financial Officer, Executive Vice-President Finance and Senior Counsel. The agreement had a term of three years. The agreement provided that Mr. Miller was to be paid an annual base salary of \$200,000. In addition, the agreement provided that Mr. Miller was eligible to receive a discretionary cash performance bonus in an amount, if any, as determined by the Board in its sole discretion. Under the agreement, Mr. Miller received a stock option grant of 600,000 shares that vested $\frac{1}{3}$ upon grant, $\frac{1}{3}$ after one year, and the final $\frac{1}{3}$ after two years. Upon a change of control, any unvested stock options would vest immediately. In addition, upon a change of control Mr. Miller would have been entitled to a stock appreciation award that is equal to the stake that he holds at the time of the change of control. As stated above, Mr. Miller's employment terminated on January 30, 2007, at which time Mr. Miller received two times his annual salary plus an amount to cover taxes, totaling \$543,275. Mr. Miller's stock options vested upon termination of employment, and will expire 90 days after such termination.

Robert L. Dumont

On March 31, 2005, we entered into an employment agreement with Robert L. Dumont to serve as our Executive Vice President of Business Development for a term of three years. Under the agreement, Mr. Dumont was paid an annual base salary of \$120,000, subject to annual adjustment at the discretion of the Board. In addition, the agreement provided that Mr. Dumont was eligible to receive a discretionary cash performance bonus in an amount, if any, as determined by the Board in its sole discretion. If a change of control occurred, Mr. Dumont would have been entitled to a bonus of not less than 30% of his base salary and any unvested stock options or restricted stock would have vested immediately. Upon termination without cause, all unvested stock options would have vested immediately and Mr. Dumont would have been entitled to twenty-four months' salary and a bonus that is the greater of 100% of the target bonus for the year or any bonus earned for each year in the prior twenty-four month period.

On January 30, 2007, we entered into an amended and restated employment agreement with Mr. Dumont to serve as our Vice President, Business Strategies, Development and Investor Relations, and acting Chief Financial Officer for a term of two years. Under this agreement, Mr. Dumont is paid an annual base salary of \$205,000, subject to annual review and adjustment by the Board. Mr. Dumont is also eligible to receive a discretionary cash performance bonus in an amount, if any, as determined by the Board from time to time. Under the agreement, Mr. Dumont was granted a restricted stock award of 100,000 shares and he was also granted a restricted stock award of 150,000 shares, the vesting of which is tied to the completion of financings by the Company. Upon the completion of an equity or debt financing that raises capital to commence production at the Mt. Hope Mine or another mine, Mr. Dumont is entitled to a cash payment of \$200,000 upon satisfactory completion of the financing. Pursuant to the employment agreement, any outstanding unvested stock options or awards held by Mr. Dumont become fully vested at the end of the term of this agreement. If a change of control occurs, Mr. Dumont will be entitled to two years of annual base salary and all unvested stock options and awards will accelerate as to vesting. In addition, upon contemplation of a change of control event, Mr. Dumont will be entitled to receive a stock grant of 250,000 shares of common stock, issuable upon the closing of the change of control. If Mr. Dumont terminates his employment for "Good Reason," which is defined as the good faith determination by Mr. Dumont that he has been constructively discharged by the Company, which shall include, without limitation, relocation of the corporate headquarters or a decline in Mr. Dumont's health such that he cannot fulfill the services assigned to him under the agreement, Mr. Dumont is entitled to his

annual base salary and any declared bonus as of the date of termination, together with the compensation he would receive under a change of control (described above) and all unvested stock options, and awards will vest immediately.

Bruce D. Hansen

On January 30, 2007, we entered into an employment agreement with Bruce D. Hansen to serve as our Chief Executive Officer for a term of three years. Under this agreement, Mr. Hansen is paid an annual base salary of \$350,000, subject to annual review and adjustment by the Board. Mr. Hansen is also eligible to receive a discretionary cash performance bonus in an amount, if any, as determined by the Board from time to time. In addition, Mr. Hansen is granted a stock option to purchase 750,000 shares of stock, of which 500,000 shares vested upon grant and 250,000 shares vest on the first anniversary of the grant. Mr. Hansen was also granted a restricted stock award of 250,000 shares, the vesting of which is tied to the completion of financings by the Company. Upon the completion of an equity or debt financing that raises capital to commence production at the Mt. Hope Mine, Mr. Hansen is entitled to a cash payment of \$1,000,000 upon satisfactory completion of the financing. If a change of control occurs, Mr. Hansen will be entitled to three years of annual base salary and all unvested stock options and awards will accelerate as to vesting. If Mr. Hansen terminates his employment for Good Reason, which includes substantial diminution of Mr. Hansen's duties, a direction to Mr. Hansen that would violate local, state or federal law, or a failure by the Company to pay Mr. Hansen's base salary, Mr. Hansen is entitled to his annual base salary as of the date of termination, together with one year of his base salary.

Director Compensation

The following table sets forth information concerning compensation paid for the year ended December 31, 2006 to directors who were not employees. Mr. Russell, who is an employee, does not receive any separate cash compensation as a director. His compensation is fully reflected in the Summary Compensation Table and, as appropriate, in the other tables above.

DIRECTOR COMPENSATION

Name	Fees Earned or Paid in Cash (\$)	Option Awards (\$)	All Other Compensation (\$)	Total (\$)
John B. Benjamin	\$ 6,000	\$ 81,020		\$ 87,020
Ricardo M. Campoy	\$ 4,000	\$ 74,796		\$ 78,796
R. Llee Chapman	\$ 9,500	\$ 81,020		\$ 90,520
Richard F. Nanna	\$ 7,750	\$ 81,020		\$ 88,770
Roy A. Pickren, Jr.	\$ 3,000	\$ 74,796		\$ 77,796
Gene W. Pierson	\$ 6,000	\$ 81,020		\$ 87,020
Norman A. Radford	\$ 6,000	\$ 81,020		\$ 87,020
R. David Russell	\$ 6,500	\$ 81,020		\$ 87,520

ITEM 11. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED SHAREHOLDER MATTERS**Securities Authorized for Issuance under Equity Compensation Plans**

The table below sets forth certain information with respect to our equity compensation plans as of December 31, 2006:

	Number of securities to be issued upon exercise of outstanding options	Weighted average exercise price of outstanding options	Number of securities remaining available for future issuance under equity compensation plans
Equity compensation plans not approved by security holders	3,110,000	\$ 1.58	n/a
Equity compensation plans approved by security holders:			
2003 Stock Option Plan	540,000	\$ 0.59	360,000
2006 Equity Incentive Plan			3,500,000 (1)
Total	3,650,000	\$ 1.44	3,860,000

(1) The aggregate number of shares of common stock that may be issued pursuant to awards granted under the 2006 Equity Incentive Plan will not exceed 3,500,000 plus the number of shares that are ungranted and those that are subject to reversion under 2003 Stock Plan. Shares under the 2003 Plan that become eligible for awards under the 2006 Plan may not be granted again under the 2003 Plan.

Security Ownership of Certain Beneficial Owners and Management

The following table sets forth information as of February 28, 2007 regarding the ownership of our Common Stock by:

- each person who is known by us to own more than 5% of our shares of common stock;
- each of our named executive officers and directors; and
- all of our executive officers and directors as a group.

Edgar Filing: IDAHO GENERAL MINES INC - Form 10KSB

The number of shares beneficially owned and the percentage of shares beneficially owned are based on 44,107,540 shares of common stock outstanding as of February 28, 2007.

For the purposes of the information provided below, beneficial ownership is determined in accordance with the rules of the SEC, and for each person includes shares that person has the right to acquire within 60 days following February 28, 2007 subject to options, warrants or similar instruments. Except as indicated in the footnotes to these tables, and as affected by applicable community property laws, all persons listed have sole voting and investment power for all shares shown as beneficially owned by them.

Name(1)	Number of Shares	Percent of Voting Stock
Robert L. Russell(2)	2,895,822	6.5 %
John B. Benjamin(3)	343,000	*
Gene W. Pierson(4)	286,000	*
Norman A. Radford(5)	243,975	*
R. David Russell(6)	1,250,070	2.8 %
Richard Nanna(7)	518,003	1.2 %
Robert Llee Chapman(8)	394,000	*
Ricardo Campoy(9)	97,500	*
Robert L. Dumont(10)	1,458,652	3.3 %
Bruce D. Hansen(11)	750,000	1.7 %
CCM Master Qualified Fund, Ltd. Coghill Capital Management, LLC Clint D. Coghill(12)	12,518,300	25.9 %
Directors and executive officers as a group (10 persons)(13)	8,237,022	17.4 %

* Less than 1%.

(1) The address for our directors and officers is 10 N. Post Street, Suite 610, Spokane, WA 99201.

(2) Includes: (a) 690,000 share issuable upon the exercise of vested options, and (b) 479,343 shares indirectly held by Robert Russell. This does not include any shares issuable to Robert Russell in the event of a change of control of the Company or upon other events pursuant to the terms of Mr. Russell's employment agreement.

(3) Includes 190,000 shares issuable upon the exercise of vested options and 15,000 shares issuable upon the exercise of a warrant.

(4) Includes 220,000 shares issuable upon the exercise of vested options and 20,000 shares issuable upon the exercise of a warrant.

(5) Includes 175,000 shares issuable upon the exercise of vested options.

(6) Includes 290,000 shares issuable upon the exercise of vested options and 500,000 shares issuable upon the exercise of a warrant.

(7) Includes 220,000 shares issuable upon the exercise of vested options.

(8) Includes 190,000 shares issuable upon the exercise of vested options.

(9) Includes 90,000 shares issuable upon the exercise of vested options.

(10) Includes (a) 200,000 shares issuable upon the exercise of vested options, (b) 400,000 shares issuable upon exercise of warrants, and (c) 250,000 in restricted stock grants. This does not include any shares issuable to Mr. Dumont in the event of a change of control of the Company or upon other events pursuant to the terms of Mr. Dumont's employment agreement.

(11) Includes 500,000 shares issuable upon the exercise of vested options, and 250,000 shares in restricted stock grants.

(12) Based on a Schedule 13D filed with the SEC on October 31, 2006. Includes 4,250,000 shares issuable upon the exercise of a warrant. The address for these persons is 1 N. Wacker Dr. Ste. 4350, Chicago, IL 60606. Such persons disclaim beneficial ownership of the securities except to the extent of their pecuniary interest therein.

(13) Includes 2,785,000 shares issuable upon the exercise of vested options, 415,000 shares issuable upon the exercise of warrants and 500,000 shares in restricted stock grants.

ITEM 12. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

Our Audit and Finance Committee reviews any transaction involving the Corporation and a related party at least once a year or upon any significant change in the transaction or relationship. For these purposes, a related party transaction includes any transaction required to be disclosed pursuant to Item 404 of Regulation S-K.

On August 16, 2006 the Company entered into an employment agreement effective August 14, 2006 with Andrew J. Russell, a son of the Company's former President and CEO, for services as Senior Manager Permitting and Technical. Under this agreement, Andrew J. Russell is paid \$150,000 per year and was granted a stock option to purchase 60,000 shares at \$2.10 per share, the closing price of the Company's stock on August 15, 2006.

ITEM 14. PRINCIPAL ACCOUNTANT FEES AND SERVICES

Audit Fees

The aggregate fees billed for professional services rendered by the Company's principal accountant for the audit of the Company's annual financial statements for the fiscal years ended December 31, 2006, 2005 and 2004 were \$27,500, \$21,197 and \$19,643, respectively.

Audit-Related Fees

There were no fees billed in the last three fiscal years for assurance and related services by the principal accountant that are reasonably related to the performance of the audit or review of the Company's financial statements except as set forth in the preceding paragraph.

Tax Fees

There were no fees billed in the last three fiscal years for professional services rendered by the principal accountant for tax compliance, tax advice and tax planning.

All Other Fees

The Company incurred no fees from the principal accountant during the last two fiscal years for products and services other than as set forth above.

Policy on Audit Committee Pre-Approval of Audit and Non-Audit Services of Independent Auditors

The Audit and Finance Committee is responsible for appointing, setting compensation and overseeing the work of the independent auditors. The Audit and Finance Committee has established a policy regarding pre-approval of all audit and non-audit services provided by the independent auditors. On an ongoing basis, management communicates specific projects and categories of services for which advance approval of the Audit and Finance Committee is requested. The Audit and Finance Committee reviews these requests and advises management if the Audit and Finance Committee approves the engagement of the independent auditors for specific projects. On a periodic basis, management reports to the Audit and Finance Committee regarding the actual spending for such projects and services compared to the approved amounts. The Audit and Finance Committee may also delegate the ability to pre-approve audit and permitted non-audit services to a subcommittee consisting of one or more Audit and Finance Committee members, provided that any such pre-approvals are reported on at a subsequent Audit and Finance Committee meeting.

GLOSSARY OF TECHNICAL TERMS

AA	Atomic absorption.
Alteration	Changes in the chemical or mineralogical composition of a rock by hot aqueous solutions.
ANFO	An explosive composition consisting of an oxidizing agent such as ammonium nitrate and a fuel material that may include a fuel oil and which also comprises a solid fuel such as rubber particles or polystyrene.
Apophyses	A small dike or sill injected from a larger intrusive body into adjacent rocks.
Aqua regia	A mixture of hydrochloric and nitric acids capable of dissolving many metals including gold.
Assay	An analysis to determine the proportions of metals or other valuable commodities in a sample.
Bedrock	Solid rock exposed at the surface of the Earth or overlain by unconsolidated material, weathered rock or soil.
Block model	Representation of a mineral deposit by a three dimensional array of blocks.
Chalcopyrite	A copper iron sulfide mineral.
Cm(s)	Centimeters.
Deposit	Natural occurrence of a useful mineral.
Diamond drilling	A type of rotary drilling in which bits containing diamonds are used as the rock-cutting tool and core is usually recovered.
Dike	A planar intrusion that cuts bedding or layering of the surrounding rocks.
FeMo	Ferromolybdenum.
g	Gram.
GPS	Global positioning system.
Grade	Relative quantity or the percentage of ore mineral or metal content in an ore body.
HDPE	High density polyethylene.
HQ	2.5 inches diameter drill core.
HQ core size	Drill core with a diameter of 2.5 inches.
km(s)	Kilometers.
K tonnes	A measure of weight equal to 1,000 tonnes.
km ²	Square kilometers.
kwh	Kilowatt hours.
lb or lbs	Pounds.
Lithologic	Adjective from lithology pertaining to rock.
M	Meter.
85	

m3	Cubic meter.
Magmatic	Of, pertaining to, or derived from naturally occurring molten rock material.
Mill	Equipment used to grind crushed rock to the desired size for mineral extraction.
Mineralization	The presence of minerals of possible economic value and also the process by which concentration of economic minerals occurs.
Mm	Millimeters.
Mo	Molybdenum.
MoS2	Molybdenite.
NQ	1.87 inches diameter drill core.
NQ size core	Drill core with a diameter of 1.87 inches.
Open pit	A large-scale hard-rock surface mine.
Ore	A mineral or aggregate of minerals which can be commercially mined at a profit.
Ounce or oz	Troy ounce (= 31.1035 grams).
Potassic Alteration	Rock characterized by potassium-feldspar minerals.
Pyrite	An iron sulfide mineral.
RC	Reverse circulation.
Rhyolite	Rhyolite is a type of lava.
SAG mill	Semi autogenous grinding mill.
Silicate	A compound whose crystal lattice contains the silicate tetrahedron.
Sill	An intrusion that is sheet-like and parallel to bedding or layering in the host rocks.
SX-EW	Solvent Extraction Electrowinning.
Tailings	The gangue and other refuse material resulting from the washing, concentration or treatment of ground ore.
Technical Report	Mount Hope Project, Eureka, Nevada USA, Resource and Reserve Estimate Technical Report dated December 19, 2005.
TMO	Technical grade molybdenum oxide.
Toll	Royalty on minerals.
Toll Roasting	Roasting third party molybdenum concentrates.
Ton	A measure of weight equal to 2,000 pounds.
Tonne	A measure of weight equal to 1,000 kilograms or 2,204.6 lbs.
Tuff	Rock formed from volcanic ash.
UTM	Universal Transverse Mercator a commonly used map projection system.
Vein	A tabular deposit of minerals occupying a fracture, in which particles may grow away from the walls towards the middle.
