SUMMARY OF 2007 PEBBLE EAST DRILL HOLE ASSAY RESULTS

February 19, 2008, Vancouver, BC - Ronald W. Thiessen, President and CEO of Northern Dynasty Minerals Ltd. ("Northern Dynasty" or the "Company") (TSX:NDM;AMEX:NAK) is pleased to provide a summary of assay results from the 2007 drill program at the Pebble Project, located in southwestern Alaska.

The 2007 drill program was highly successful with 157,000 feet of core drilling completed in 36 holes (numbered 6354 through 7389 and 7393). Drilling was focused on determining the overall size, copper-gold-molybdenum grade distribution and geometry of the world class Pebble East deposit. The 2007 drill holes intersected long intervals of high-grade copper-gold-molybdenum mineralization consistently exceeding 1% copper equivalent and the deposit remains open. An updated Pebble East resource estimate will be compiled by next week.

A Table of 2007 Pebble East Deposit Assay Results and a Drill Hole Location Plan are attached to his news release and posted on Northern Dynasty's website at www.northerndynasty.com. Highlights from 2007 drill holes include:

-Hole 7359 intersected 2228 feet grading 1.42% copper equivalent (CuEQ¹) comprising 0.92% Cu, 0.50 g/t Au, 0.035% Mo. Included in this intersection is a 451 foot interval grading 1.93% CuEQ (0.95% Cu, 1.15 g/t Au, 0.051% Mo).

-Hole 7374 intersected 2449 feet grading 1.19% CuEQ (0.61% Cu, 0.42 g/t Au, 0.056% Mo). Included in this intersection is a 497 foot interval grading 1.67% CuEQ (0.83% Cu, 0.77 g/t Au, 0.065% Mo).

-Hole 7378 intersected 1846 feet grading 1.45% CuEQ (0.91% Cu, 0.70 g/t Au, and 0.021 Mo). Included in this intercept is a 366 foot interval grading 2.64% CuEQ (1.78% Cu, 1.15 g/t Au, and 0.033% Mo).

-Hole 7379 intersected 2560 feet grading 1.17% CuEQ (0.74% Cu, 0.33 g/t Au, 0.040% Mo). Included in this intercept is a 830 foot interval grading 1.69% CuEQ (1.31% Cu, 0.30 g/t Au, and 0.034% Mo).

-Hole 7381 intersected 2111 feet grading 1.37% CuEQ (0.77% Cu, 0.64 g/t Au, 0.037% Mo). Including in this intersection is a 911 foot interval grading 1.71% CuEQ (0.94% Cu, 1.00 g/t Au, 0.031% Mo).

-Hole 7384 intersected 1186 feet grading 1.27% CuEQ (0.74% Cu, 0.65 g/t Au, 0.026% Mo). Included in this intersection is a 266 foot interval grading 2.03% CuEQ (1.25% Cu, 1.07 g/t Au, 0.026% Mo).

-Hole 7386 intersected 2570 feet grading 1.17% CuEQ (0.66% Cu, 0.37 g/t Au, 0.049% Mo). Included in this intersection is a 1810 foot interval grading 1.30% CuEQ (0.71% Cu, 0.41 g/t Au, 0.059% Mo).

-Hole 7387 intersected 1961 feet grading 1.44% CuEQ (0.89% Cu, 0.67 g/t Au, 0.026% Mo). Included in this intersection is a 380 foot interval grading 1.75% CuEQ (0.93% Cu, 1.15 g/t Au, 0.025% Mo).

Drilling re-commenced at the Pebble Project site on February 13, 2008 with 5 rigs, ramping up to 12 rigs available by the end of June. The 2008 program will focus on Pebble East and consists of delineation drilling and infill drilling. Infill drilling is designed to upgrade the resource of a high grade portion of the deposit to an indicated category in preparation for pre-feasibility mine planning.

The copper, gold and molybdenum resources of the open pit style Pebble West deposit and the underground style Pebble East deposit rank with the most important metal accumulations in the world. The Pebble Partnership's goal is to optimize the design of the Pebble Project with regard to these mineral resources as well as social, environmental, and economic factors. The Pebble Partnership is thoroughly assessing Pebble East through drilling, engineering and environmental programs in order to integrate this important discovery into an overall pre-feasibility study that is optimal for a modern, long-life mine.

Mark Rebagliati, P.Eng., is the Qualified Person for the exploration and drilling programs for the Pebble Project and is supervising the quality control and quality assurance programs. Core logging and sampling are completed in the Pebble Partnership's secure facility at Iliamna, Alaska. The NQ-size core is sawn and samples are transported to the ALS Chemex laboratory in Fairbanks for drying, weighing, crushing and pulverizing. Samples are shipped by airfreight to the main ALS Chemex laboratory, North Vancouver, Canada (an ISO 9001:2000 certified laboratory) for final preparation and analysis. Gold is determined by 30 g Fire Assay (FA) fusion with an Inductively Coupled Plasma-Emission Spectroscopy (ICP-ES) finish. Copper, molybdenum and 23 other elements are assayed by four acid digestion with an ICP-ES finish. The Pebble Partnership includes standards, duplicates and blanks in addition to the laboratory's internal quality control work. Duplicate samples are analyzed by Acme Analytical Laboratories of Vancouver, Canada.

For further details on Northern Dynasty and the Pebble Project please visit the Company's website at www.northerndynasty.com or contact Investor Services at (604) 684-6365 or within North America at 1-800-667-2114. Review Canadian public filings at www.sedar.com and US public filings at www.sec.gov. For details on the Pebble Limited Partnership visit the Partnership's website at www.pebblepartnership.com.

On behalf of the Board of Directors

Ronald W. Thiessen
President & CEO

Sole Responsibility

No regulatory authority has approved or disapproved the contents of this release.

Northern Dynasty is solely and entirely responsible for the contents of this news release. No other party, including any parties which have an interest in the project, are in any way responsible for the contents hereof.

Comments on Forward Looking Information, Estimates and other Cautionary Factors

This release includes certain statements that may be deemed "forward-looking statements". All statements in this release, other than statements of historical facts, especially those that address estimated resource quantities, grades and contained metals, are forward-looking statements because they are generally made on the basis of estimation and extrapolation from a limited number of drill holes and metallurgical studies. Although diamond drill hole core provides valuable information about the size, shape and geology of an exploration project, there will always remain a significant degree of uncertainty in connection with these valuation factors until a deposit has been extensively drilled on closely spaced centers which has occurred only in specific areas on the Pebble Project. Although the Company believes the expectations expressed in its forward-looking statements are based on reasonable assumptions, such statements should not be in any way construed as guarantees of the ultimate size, quality or commercial feasibility of the Pebble Project or of the Company's future performance. Subsequent results and developments may differ materially from those postulated in the estimates and forward-looking statements. Other factors that could cause the Company's actual results and performance to differ materially from those in forward-looking statements include adverse market prices for metals, the conclusions of detailed feasibility and technical analyses, lower than expected grades and quantities of resources, mining rates and metal recovery rates and the fact that necessary capital may not be available to the Company on terms acceptable to it or at all. The need for compliance with extensive environmental and socio-economic rules and practices and the requirement for the Company to obtain government permitting can cause a delay or even abandonment of a mineral project. The Company is subject to the specific risks inherent in the mining business as well as general economic and business conditions. For more information on the Company, Investors should review the Company's annual Form 20-F filing with the United States Securities and Exchange Commission and its home jurisdiction filings that are available at www.sedar.com.

Information about CuEQ

Copper equivalency or "CuEQ" is a manner of expressing poly-metallic deposits as a grade of the principal mineralization (by value). As used herein, gold and molybdenum values have been expressed as part of the copper grade. CuEQ as calculated herein is based on assumed metal prices of US\$1.00/lb for copper, US\$400/oz for gold, and US\$6.00/lb for molybdenum. Copper equivalent has not been adjusted for metallurgical recoveries. Adjustment factors to account for differences in relative metallurgical recoveries for gold, copper and molybdenum depend upon the completion of definitive metallurgical testing. Significant shifts in the relative values of these metals can significantly change the CuEQ.

Information Concerning Estimates of Measured, Indicated and Inferred Resources

This news release also uses the terms "measured resources", "indicated resources" and "inferred resources". Northern Dynasty Minerals Ltd. advises investors that although these terms are recognized and required by Canadian regulations (under National Instrument 43-101 Standards of Disclosure for Mineral Projects), the U.S. Securities and Exchange Commission does not recognize them. Investors are cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted into reserves. In addition, "inferred resources" have a great amount of uncertainty as to their existence, and economic and legal feasibility. It cannot be assumed that all or any part of an Inferred Mineral Resource will ever be upgraded to a higher category. Under Canadian rules, estimates of Inferred Mineral Resources may not form the basis of feasibility or pre-feasibility studies, or economic studies except for Preliminary Assessment as defined under 43-101. Investors are cautioned not to assume that part or all of an inferred resource exists, or is economically or legally mineable.

TABLE OF 2007 PEBBLE EAST DEPOSIT ASSAY RESULTS

Drill Hole Number	Vertical Depth to Cretaceous (feet)	Hole Dip (degrees)	Hole Direction (degrees)		Intercept (metres)	From (feet)	To (feet)	Intercept (feet)	Cu %	Au ² g/t	Mo %	CuEQ ¹ %

¹ Copper equivalent calculations use metal prices of US\$1.00/lb for copper, US\$400/oz for gold and US\$6.00/lb for molybdenum. Metallurgical recoveries and net smelter returns are assumed to be 100%. $CuEQ = Cu \% + (Au \text{ g/t} \times 12.86/22.05) + (Mo \% \times 132.28/22.05)$

² Au values > 5.0 g/t capped at 5.0 g/t.

Holes 7390M, 7391M and 7392M were drilled at Pebble West for geotechnical and metallurgical purposes
