ACACIA AUTOMOTIVE, INC.
NOTES TO FINANCIAL STATEMENTS
MARCH 31, 2009 AND 2008

NOTE 1 – THE COMPANY AND BASIS OF PRESENTATION

Acacia Automotive, Inc. (“Acacia” or the “Company”) is engaged in acquiring and operating automotive auctions, including automobile, truck equipment, boat, motor home, RV and other related vehicles.

BASIS OF PRESENTATION – The Company has elected to prepare its financial statements in accordance with generally accepted accounting principles (United States) with December 31, as its year end. The financial statements and notes are representations of the Company’s management who are responsible for their integrity and objectivity.

The accompanying financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America for annual financial information and with the instructions to Form 10-Q and Article 10 of Regulation SX. Accordingly, they do not include all of the information and footnotes required by generally accepted accounting principles for complete consolidated financial statements. In the opinion of management, all adjustments considered necessary for a full presentation have been included. All such adjustments are of a normal and recurring nature.

Historically, the Company had issued warrants to purchase shares of our common stock in connection with certain of its debt and equity financings and Common stock options. The Company records each of the securities issued on a fair value basis up to the amount of the proceeds received. The Company estimates the fair value of the warrants and options using the Black-Scholes option pricing model. The Black-Scholes model is dependent on a number of variables and estimates including: interest rates, dividend yield, volatility and the expected term of the warrants. The estimates are based on market interest rates at the date of issuance, our past history for declaring dividends, the Company’s estimated stock price volatility and the contractual term of the warrants. The value ascribed to the warrants in connection with debt offerings is considered a cost of capital and amortized to interest expense over the term of the debt.

CONSOLIDATION – The Company owns 100% of the voting stock of Acacia Augusta Vehicle Auction, Inc. The consolidated financial statements include the accounts of the Company and Acacia Augusta Vehicle Auction, Inc. All significant intercompany accounts and transactions are eliminated in consolidation.

NOTE 2 – GOING CONCERN CONSIDERATIONS

The Company neither has sufficient cash on hand nor is it generating sufficient revenues to cover its operating overhead. These facts raise doubt as to the Company’s ability to continue as a going concern. The Company has been operating based on the proceeds from the sale of Common stock in private offerings, loans from its officers/directors, and revenues from its auction operating unit. There is no guarantee that such officers/directors will continue to provide operating funds for the Company or that equity capital will be available. In order to pursue its goals and commitments, the Company will be required to obtain significant funding to meet its projected minimum expenditure requirements. Management’s plans include raising funds from the public through a private placement stock offering, acquiring additional auto auction operations that will provide profitability and liquidity, and attempting to increase the revenues from its current auction operations. Management intends to make every effort to identify and develop sources of funds, but there is no assurance that Management’s plans will be successful.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

Forward-Looking Information

The Management's Discussion and Analysis of Financial Condition and Results of Operations and other sections of the Form 10-Q contain forward-looking information. The forward-looking information involves risks and uncertainties that are based on current expectations, estimates, and projections about the Company's business, management's beliefs and assumptions made by management. Words such as "expects", "anticipates", "intends", "plans", "believes", "seeks", "estimates", and variations of such words and similar expressions are intended to identify such forward-looking information. Therefore, actual outcomes and results may differ materially from what is expressed or forecasted in such forward-looking information due to numerous factors, including, but not limited to, availability of financing for operations, successful performance of internal operations, impact of competition and other risks detailed below as well as those discussed elsewhere in this Form 10-Q and from time to time in the Company's Securities and Exchange Commission filings and reports. In addition, general economic and market conditions and growth rates could affect such statements.

General

The Company believes that vehicle auctions have historically shown that units they sell do not generally decline substantially during a mild recession. We believe this is attributable to, among other facts, that in a recession the overall demand for used vehicles does not decline significantly, or at least declines less than new car production would indicate, because some consumers that would otherwise purchase new vehicles purchase used vehicles, acquiring vehicles traditional purchasers of used vehicles may otherwise forgo or delay. For those reasons and more, we believe that the auto auction industry is more dependent upon the number of actual used vehicles in operation (VIO) in the U.S., rather than upon retail vehicle sales and manufacturing output. However, the current recession has proven to be quite severe, and has resulted in a greater loss of units for sale or sold at most auto auctions than in recent recessionary periods, even though our auction operations have actually seen an increase in volumes in most instances.

Wholesale automotive markets remain suppressed throughout the entire U.S. as compared to previous year's levels, although not so much as the retail markets. While lower volumes of vehicles are generally available to the wholesale markets as compared to the prior year, the constrictions are not sufficient to preclude profitability, especially at auctions. During previous periods of economic downturns and recession, the automotive auction industry has traditionally fared well compared to many other industries.

As is common with other auto auctions, the Company has experienced and expects to continue to experience fluctuations in its quarterly results of operations due to a number of factors, many of which are beyond the Company's control and which are common to the auto auction industry. Generally, the volume of vehicles sold at the Company's auctions is highest in the first and second calendar quarters of each year and slightly lower in the third quarter. Fourth quarter volume of vehicles sold is generally lower than all other quarters. This seasonality is affected by several factors including weather, the timing of used vehicles available for sale from selling customers, holidays, and the seasonality of the retail market for used vehicles, which affect the demand side of the auction industry. Used vehicle auction volumes tend to decline during prolonged periods of winter weather conditions. Among the other factors that have in the past and/or could in the future affect the Company's operating results are: general business conditions; trends in new and used vehicle sales and incentives, including wholesale used vehicle pricing; economic conditions including fuel prices and interest rate fluctuations; trends in the vehicle remarketing industry; the introduction of new competitors; competitive pricing pressures; and costs associated with the acquisition of businesses or technologies. As a result of the above factors, operations are subject to significant variability and uncertainty from quarter to quarter, and revenues and operating expenses related to volume will fluctuate accordingly on a quarterly basis.

Discussion Regarding the Company's First Acquired Operating Entity

With the acquisition of the Augusta Auto Auction on July 10, 2007, the Company commenced operations, ceased being a shell company, and conducted its first weekly auction on July 11th under Acacia's management. The Company's only operations in 2007 were those operations, and those operations remain the Company's only operations through Q1 of 2009.

Operating Results of the Auction

Three months ended March 31, 2009

The Auction incurred a profit of \$ 62,952 on revenues of \$321,000 for the three months ended March 31, 2009. Of that profit, \$53,073 represented non-cash expenses for amortization and depreciation and \$5,495 represented interest charges, leaving the auction in a positive cash-flow posture for the period.

The first quarter of 2009 saw an 18.2% increase in the number of vehicles sold and an increase of 24.3% in units entered at our Augusta Auto Auction operation versus the same period in the previous year. The Company considered this as a noteworthy result in consideration of generally-weakening economic conditions, reduced productivity at automotive manufacturers, tightening credit and higher consumer interest rates, and other negative pressures affecting trade in general.

	2009	
Units Entered vs. Q1 2008	+24.3	%
Units Sold vs. Q1 2008	+18.2	%
Conversion Rate Q1 2008	54.90	%
Conversion Rate Q1 2009	52.25	%
Change in Buy/Sell Fee Revenues vs. Q1 2008	+53.7	%

The auction continues to display strong growth under Acacia's management versus previous periods despite a very weak general economy and poor performance by auto manufacturers and retailers.

Discussion Regarding the Parent Company's Operating Results

Three months ended March 31, 2009

The auction's Q1 net profit accounted for reducing the consolidated Q1 loss to the parent company to \$37,444 compared to a loss in the same period of 2008 of \$545,359. Of this loss \$53,074 represented non-cash expenses for amortization and depreciation at the auction and \$1,102 was incurred as additional depreciation and amortization by the parent company. The Company also incurred a charge of \$16,177 in non-cash operating expenses for options and warrants issued under the Company's 2007 Stock Incentive Plan as the ratable expense for Q1 2009 resulting from options and warrants issued in 2006, 2007, and 2008 but not yet fully vested or exercised. As a result, the Company generated \$123,739 in cash flow from operations and a net cash flow of \$36,612 for the quarter. This marked the first time since its inception as an automotive concern in 2006 that the Company registered a positive cash flow for the consolidated entity.

We incur expenses at the corporate level in addition to those incurred at our operations at the Augusta auction. Our compensation for executives as shown under Employee Compensation runs about \$61,000 per quarter, and our option and warrant expense, which is amortized, has averaged in the six month period ended June 30, 2009, approximately \$16,200 per quarter. For the six months ended June 30, 2009 we incurred a loss of \$29,362. Corporate G&A expenses accounted for approximately \$250,000 in the first six months, and included legal and accounting fees of approximately \$5,300, office rental costs of approximately \$2,500, non-cash amortized warrant and option expenses of approximately \$32,350, and other traditional expenses for travel, convention expenses, equipment lease/rental, postage and shipping, printing and office supplies, insurance, telephone, light heat power, etc.

Liquidity and Need for Additional Capital

We look for our operations to provide the cash flow and cash return on our investment. Presently, the cash flow from our Augusta operation is sufficient to support those operations in the current manner, although we anticipate having to move to a different, larger location as described below. Nonetheless, our current operations do not provide sufficient cash flow to cover fully our corporate activity on an ongoing basis, essentially our executive officers, administrative overhead, and overhead that includes the cost of lawyers and accountants required to be publicly held.

The Company will ultimately be forced to seek a larger operating facility for its auction operations in the greater Augusta area, since the auction cannot accommodate the anticipated growth at its present location.

The Company's liquidity in 2007 and 2008 was provided through the closing of private placements of common stock in the amounts of \$1,112,500 and \$130,000 respectively, and from the Company's auction operations since July 10, 2007. Presently, the Company's liquidity is supplemented by a \$300,000 line of credit with Wachovia Bank, N.A. Although the Company presently has a certificate of deposit with the same bank of just over \$150,000, this line of credit is used to cover some instances in which payments to dealers selling vehicles through the auction exceeds collected payments for those vehicles. The Company anticipates increasing the size of the available line as its sales volume grows. The bank charges an interest rate on the line of credit equal to prime plus 1.5% on the outstanding daily balance, if any. The line of credit is secured by all of the Company's deposits at the bank.

Frequently, when we hold an auction near the end of a quarter, our receivables and payables will be large compared to prior quarters or as a ratio of receivables or payables to revenues for that quarter and the other quarters. Receivables and payables for a given auction are substantially liquidated within days of the auction process, but appear distorted when occurring close to the end of an accounting period.

The Company is currently engaged in its plan of seeking to grow through acquisitions as well as through organic means. To succeed in doing so, the Company will require additional capital, anticipated to be through sale of

Common Stock.

Financing of Planned Expansions and Other Expenditures

The Company plans to grow through acquisitions and anticipates that it will need to raise additional capital to do so, probably through a private placement offering of its Common stock.

Financial Reporting and New Technologies

As part of its commitment to improve our operating and reporting efficiencies, the Company engaged a certified public accountant and is seeking a Controller and/or Chief Financial Officer.

2

Item 4T. Controls and Procedures

Management's Report on Internal Control over Financial Reporting

The Company maintains disclosure controls and procedures that are designed to ensure that information required to be disclosed in the Company's Securities Exchange Act reports is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms, and that such information is accumulated and communicated to the Company's management, including its Chief Executive Officer who acts as our Chief Financial Officer to allow timely decisions regarding required disclosure. During the 90-day period prior to the date of this report, an evaluation was performed under the supervision and with the participation of the Company's management, including the Chief Executive Officer, of the effectiveness of the design and operation of the Company's disclosure controls and procedures. Based upon that evaluation, the Chief Executive Officer concluded that the Company's disclosure controls and procedures were effective. Nonetheless, we have identified areas that we are addressing which we believe need to be rectified.

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Under the supervision and with the participation of our management, particularly our chief executive officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework set forth in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Changes in Internal Control over Financial Reporting

In the course of conducting our audit for the fiscal year 2008, our auditor, Killman, Murrell & Company, P.C. indicated that we have three material weaknesses: (i) Our reconciliations and account analysis is not performed in a timely manner because we do not have full time financial accounting personnel; (ii) Our sales and accounts receivable software is not integrated with our financial accounting software and our accounting personnel do not perform routine reconciliations of data entered on the sales reporting system to appropriate control accounts in the general ledger system with reconciliations made in the aggregate without individual account scrutiny regardless of materiality; and (iii) we made several adjusting entries relating to the recording of options and the accrual of certain liabilities. material weaknesses involving internal control, although it did not identify to us any report that necessitated restatement. These material weaknesses related to our accounting personnel, accounting for cash, documentation with respect to options and warrants as well as the issuance of common stock.

During most of fiscal 2008, the Company had no full time financial accounting personnel. As such many reconciliations and account analysis were not performed in a timely manner. However, contemporaneous to year-end, the Company added a certified public accountant with financial reporting experience to its staff. The Company is also actively seeking a qualified CFO to join its executive team, and feels that these additions will mitigate this issue.

As with many vehicle auction companies of its size, the Company's sales and accounts receivable software is not integrated with its financial accounting software. In 2008, the accounting personnel did not properly perform routine reconciliations of the results of the data entered on the sales reporting system to the appropriate control accounts in the general ledger system. As such, certain reconciliations to the control accounts were made in the aggregate without individual account scrutiny, regardless of materiality. With the addition of the accountant, the Company will require reconciliations of the control accounts with each accounting period close.

The auditors proposed significant adjusting entries to both the subsidiary and parent companies that comprise the consolidated reporting entity. These entries were principally the result of analyzing the Company's recording of options and the accrual of certain liabilities. With the addition of the accountant, the Company will perform this analysis on no less than a quarterly basis.

PART II OTHER INFORMATION

Item 5. Other Information.

None.
