### The Markets in Review

Dear Shareholder.

Diverging monetary policies and shifting economic outlooks across regions have been the overarching themes driving financial markets over the past couple of years. Investors spent most of 2015 anticipating the end of the Federal Reserve s (the Fed ) near-zero interest rate policy as U.S. growth outpaced other developed markets. The Fed ultimately hiked rates in December, whereas the European Central Bank and the Bank of Japan took additional steps to stimulate growth, even introducing negative interest rates. The U.S. dollar had strengthened considerably ahead of these developments, causing profit challenges for U.S. companies that generate revenues overseas, and pressuring emerging market currencies and commodities prices.

Global market volatility increased in the latter part of 2015 and spilled over into early 2016. Oil prices were a key factor behind the instability after collapsing in mid-2015 due to excess global supply. China, one of the world s largest consumers of oil, was another notable source of stress for financial markets. Signs of slowing economic growth, a depreciating yuan and declining confidence in the country s policymakers stoked investors worries about the potential impact of China s weakness on the global economy. Risk assets (such as equities and high yield bonds) suffered in this environment.

After a painful start to the new year, fears of a global recession began to fade as the first quarter wore on, allowing markets to calm and risk assets to rebound. Central bank stimulus in Europe and Japan, combined with a more tempered outlook for rate hikes in the United States, helped bolster financial markets. A softening in U.S. dollar strength offered some relief to U.S. exporters and emerging market economies. Oil prices found firmer footing as global supply showed signs of leveling off.

The selloff in risk assets at the turn of the year brought valuations to more reasonable levels, creating some appealing entry points for investors in 2016. Nonetheless, slow but relatively stable growth in the United States is countered by a less optimistic global economic outlook and uncertainties around the efficacy of China s policy response, the potential consequences of negative interest rates in Europe and Japan, and a host of geopolitical risks.

For the 12 months ended April 30, 2016, higher-quality assets such as municipal bonds, U.S. Treasuries and investment grade corporate bonds generated positive returns, while riskier assets such as non-U.S. and small cap equities broadly declined.

At BlackRock, we believe investors need to think globally, extend their scope across a broad array of asset classes and be prepared to adjust accordingly as market conditions change over time. We encourage you to talk with your financial advisor and visit blackrock.com for further insight about investing in today s markets.

## Trust Summary as of April 30, 2016

#### BlackRock Credit Allocation Income Trust

#### **Trust Overview**

BlackRock Credit Allocation Income Trust s (BTZ) (the Trust ) investment objective is to provide current income, current gains and capital appreciation. The Trust seeks to achieve its investment objective by investing, under normal market conditions, at least 80% of its assets in credit-related securities, including, but not limited to, investment grade corporate bonds, high yield bonds (commonly referred to as junk bonds), bank loans, preferred securities or convertible bonds or derivatives with economic characteristics similar to these credit-related securities. The Trust may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Trust s investment objective will be achieved.

- 1 Current distribution rate on closing market price is calculated by dividing the current annualized distribution per share by the closing market price. The current distribution rate consists of income, net realized gains and/or a return of capital. Past performance does not guarantee future results.
- <sup>2</sup> The distribution rate is not constant and is subject to change. A portion of the distribution may be deemed a return of capital or net realized gain.
- Represents reverse repurchase agreements as a percentage of total managed assets, which is the total assets of the Trust (including any assets attributable to any borrowings) minus the sum of liabilities (other than borrowings representing financial leverage). For a discussion of leveraging techniques utilized by the Trust, please see The Benefits and Risks of Leveraging on page 10.

#### Performance and Portfolio Management Commentary

Returns for the six months ended April 30, 2016 were as follows:

Returns	Rased	On
IXCLUI IIS	Dascu	OII

	Market Price	NAV
$BTZ^{1,2}$	4.97%	2.88%
Lipper Corporate BBB-Rated Debt Funds (Leveraged) <sup>3</sup>	5.60%	2.74%

The Trust s discount to NAV, which narrowed during the period, accounts for the difference between performance based on price and performance based on NAV.

<sup>3</sup> Average return.

The following discussion relates to the Trust s absolute performance based on NAV:

#### What factors influenced performance?

The Trust s allocations to the wireline, tobacco, pharmaceuticals, cable & satellite, and midstream energy industries made positive contributions to performance, as did its position in U.S. banks. The Trust s weighting in high-yield bonds, which rallied strongly from mid-February onward, also contributed on an absolute basis.

The largest detractors from performance included the Trust s positions in the metals & mining, independent energy and refining industries, all of which weakened in conjunction with the volatility in commodity prices. An allocation to capital securities also hurt results, as the sector gave back some of its prior gains during the first quarter of 2016. (Capital securities are dividend-paying securities that combine some features of both corporate bonds and preferred stocks, while generally providing higher yields to compensate for being less senior in the issuer s capital structure.)

The Trust held derivatives in the form of futures, swaps, swaptions and options in order to manage duration and convexity risk. (Duration is a measure of interest rate sensitivity; convexity measures how duration changes as interest rates change.) The positions negatively affected performance due to the continued selloff in swap spreads, which became increasingly negative throughout the period. Derivatives were also used to aid in implementing the Trust syield curve positioning. The Trust used credit default swaps, including those linked to broad indices or individual securities, to manage credit risk. In addition, the Trust used leverage to enhance yield.

Describe recent portfolio activity.

The Trust lowered its weighting in industrials through reductions in the metals & mining, pharmaceuticals, and wireless subsectors. The Trust added to its weighting in the midstream energy and electric utilities industries. From a quality perspective, the Trust s exposure increased in bonds rated A, CCC and BB, and its exposure decreased to securities rated B and BBB on a risk-adjusted basis.

Describe portfolio positioning at period end.

In the industrials sector, the Trust held its largest weightings in the energy and communications industries. Within these groups, the investment advisor favored the midstream energy and wireline subsectors, respectively. The Trust also had significant allocations to the pharmaceuticals and mining industries, although it reduced its weighting in both groups during the period.

Within financials, the Trust held the largest position in U.S. banks. This aspect of the Trust s positioning reflected the investment advisor s positive view on the sector following the weakness it experienced in the first quarter of 2016. From a ratings perspective, the Trust held its largest exposure in BBB-rated issues.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

**BlackRock Floating Rate Income Trust** 

#### **Trust Overview**

BlackRock Floating Rate Income Trust s (BGT) (the Trust ) primary investment objective is to provide a high level of current income. The Trust s secondary investment objective is to seek the preservation of capital. The Trust seeks to achieve its investment objectives by investing primarily, under normal conditions, at least 80% of its assets in floating and variable rate instruments of U.S. and non-U.S. issuers, including a substantial portion of its assets in global floating and variable rate securities including senior secured floating rate loans made to corporate and other business entities. Under normal market conditions, the Trust expects that the average effective duration of its portfolio will be no more than 1.5 years. The Trust may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Trust s investment objectives will be achieved.

- <sup>2</sup> The Trust s discount to NAV, which narrowed during the period, accounts for the difference between performance based on price and performance based on NAV.

3 Average return.

The following discussion relates to the Trust s absolute performance based on NAV:

#### What factors influenced performance?

For much of the six-month period, credit markets continued to be impacted by weakness in commodity-related sectors, with early 2016 being particularly challenging. Performance for floating rate loan interests (i.e. bank loans) and other credit assets began to improve around the middle of February as prices for oil and other commodities moved higher. Despite a recovery over the latter part of the period, the Trust s exposure to energy-related sectors, specifically independent energy producers and midstream energy companies, detracted from performance for the six months.

The broad floating rate bank loan market provided a positive return for the six-month period. The Trust s exposure to loans in the consumer services, pharmaceuticals/health care and technology sectors contributed positively to performance. Performance for high yield bonds was positive and

ahead of that for loans during the period, and the Trust stactical allocation to this asset class contributed to results. **Describe recent portfolio activity.** 

Throughout the six-month period, the Trust maintained its focus on the higher quality segments of the loan market in terms of loan structure, liquidity and overall credit quality. The Trust has concentrated its investments in strong companies with stable cash flows and high quality collateral, with the ability to meet interest obligations and ultimately return principal. From a sector perspective, the Trust added to names in the technology and health care sectors, while trimming exposure to pharmaceuticals and lodging. The Trust reduced its exposure to collateralized loan obligations ( CLOs ) and added slightly to its high yield bond position.

Describe portfolio positioning at period end.

At period end, the Trust held 94% of its total portfolio in bank loans, with the remainder primarily in corporate bonds and CLOs. The Trust continued to favor loans rated B where the managers are comfortable with credit quality, in view of the incremental income they offered versus BB loans. Additionally, the Trust held a modest position in CCC-rated loans, with a focus on names that have shown consistent credit improvement. While it maintained exposure to energy and metals & mining, the Trust had a conservative posture overall with respect to commodities-oriented loans. Top issuer positions included Level 3 (Wirelines), Virgin Media (Cable & Satellite), and First Data (Technology). The strategy maintained a modest stake in more conservative high yield bonds.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

4 Performance results do not reflect adjustments related to valuation and income recognition for financial reporting purposes in accordance with U.S. generally accepted accounting principles and therefore differ from the return reported in the Financial Highlights on page 75.

The following discussion relates to the Trust s absolute performance based on NAV:

#### What factors influenced performance?

The Trust s positions in high yield corporate bonds, emerging market debt and senior loans were the most significant contributors to performance. Performance was also aided by the Trust s positioning within investment grade corporate bonds.

The Trust s allocations in commercial mortgage-backed securities ( CMBS ) non-agency mortgage-backed securities ( MBS ) and asset-backed securities ( ABS ) were the largest detractors from performance.

During the period the Trust used futures, forwards, options, and swaps as a substitute for cash bond exposure, and/or to manage duration, yield curve, convexity, spread risk and credit risk. The Trust also used forward contracts to manage foreign currency exposure and express active currency views. Collectively, these positions detracted from performance.

Describe recent portfolio activity.

During the period, the Trust s exposure to credit risk was reduced as the investment advisor adopted a more cautious stance toward the markets. Allocations to MBS, ABS and CMBS were trimmed, and the Trust s high yield allocation was rotated toward more defensive issuers within the sector. In addition, the Trust s exposure to capital securities was reduced, while its position in high quality investment grade industrials was increased. The Trust s duration (and corresponding interest rate sensitivity) was increased in response to weaker U.S. economic data and dovish rhetoric from the Fed. Lastly, the Trust s allocation to floating rate securities was reduced.

Describe portfolio positioning at period end.

The Trust maintained a diversified exposure to non-government spread sectors, including non-agency MBS, high yield corporates, capital securities, ABS, collateralized loan obligations, CMBS and senior loans. The Trust also held marginal exposure to government-related sectors such as supranationals (multinational foreign government obligations) and foreign agencies.

## The Benefits and Risks of Leveraging

The Trusts may utilize leverage to seek to enhance the distribution rate on, and net asset value ( NAV ) of, their common shares ( Common Shares ). However, these objectives cannot be achieved in all interest rate environments.

In general, the concept of leveraging is based on the premise that the financing cost of leverage, which is based on short-term interest rates, is normally lower than the income earned by a Trust on its longer-term portfolio investments purchased with the proceeds from leverage. To the extent that the total assets of the Trusts (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, the Trusts—shareholders benefit from the incremental net income. The interest earned on securities purchased with the proceeds from leverage is paid to shareholders in the form of dividends, and the value of these portfolio holdings is reflected in the per share NAV.

To illustrate these concepts, assume a Trust s capitalization is \$100 million and it utilizes leverage for an additional \$30 million, creating a total value of \$130 million available for investment in longer-term income securities. If prevailing short-term interest rates are 3% and longer-term interest rates are 6%, the yield curve has a strongly positive slope. In this case, a Trust s financing costs on the \$30 million of proceeds obtained from leverage are based on the lower short-term interest rates. At the same time, the securities purchased by a Trust with the proceeds from leverage earn income based on longer-term interest rates. In this case, a Trust s financing cost of leverage is significantly lower than the income earned on a Trust s longer-term investments acquired from such leverage proceeds, and therefore the holders of Common Shares ( Common Shareholders ) are the beneficiaries of the incremental net income.

However, in order to benefit shareholders, the return on assets purchased with leverage proceeds must exceed the ongoing costs associated with the leverage. If interest and other costs of leverage exceed the Trusts—return on assets purchased with leverage proceeds, income to shareholders is lower than if the Trusts had not used leverage. Furthermore, the value of the Trusts—portfolio investments generally varies inversely with the direction of long-term interest rates, although other factors can influence the value of portfolio investments. In contrast, the value of the Trusts obligations under their respective leverage arrangements generally does not fluctuate in relation to interest rates. As a result, changes in interest

rates can influence the Trusts NAVs positively or negatively. Changes in the future direction of interest rates are very difficult to predict accurately, and there is no assurance that the Trusts intended leveraging strategy will be successful.

Leverage also generally causes greater changes in the Trusts NAVs, market prices and dividend rates than comparable portfolios without leverage. In a declining market, leverage is likely to cause a greater decline in the NAV and market price of the Trusts—shares than if the Trusts were not leveraged. In addition, the Trusts may be required to sell portfolio securities at inopportune times or at distressed values in order to comply with regulatory requirements applicable to the use of leverage or as required by the terms of leverage instruments, which may cause the Trusts to incur losses. The use of leverage may limit the Trusts—ability to invest in certain types of securities or use certain types of hedging strategies. The Trusts incur expenses in connection with the use of leverage, all of which are borne by shareholders and may reduce income to the shareholders. Moreover, to the extent the calculation of the Trusts—investment advisory fees includes assets purchased with the proceeds of leverage, the investment advisory fees payable to the Trusts—investment advisor will be higher than if the Trusts did not use leverage.

Each Trust may utilize leverage through a credit facility or reverse repurchase agreements as described in the Notes to Financial Statements.

Under the Investment Company Act of 1940, as amended (the 1940 Act.), the Trusts are permitted to issue debt up to \(^93\)% of their total managed assets. BIT is permitted to use economic leverage (which includes leverage attributable to reverse repurchase agreements) of up to 50% of its total managed assets. A Trust may voluntarily elect to limit its leverage to less than the maximum amount permitted under the 1940 Act. In addition, a Trust may also be subject to certain asset coverage, leverage or portfolio composition requirements imposed by its credit facility, which may be more stringent than those imposed by the 1940 Act.

If a Trust segregates or designates on its books and records cash or liquid assets having values not less than the value of a Trust—s obligations under the reverse repurchase agreement (including accrued interest), then such transaction is not considered a senior security and is not subject to the foregoing limitations and requirements under the 1940 Act.

### **Derivative Financial Instruments**

The Trusts may invest in various derivative financial instruments. These instruments are used to obtain exposure to a security, commodity, index, market and/or other asset without owning or taking physical custody of securities, commodities and/or other referenced assets or to manage market, equity, credit, interest rate, foreign currency exchange rate, commodity and/or other risks. Derivative financial instruments may give rise to a form of economic leverage and involve risks, including the imperfect correlation between the value of a derivative financial instrument and the underlying asset, possible default of the counterparty to the

transaction or illiquidity of the instrument. The Trusts successful use of a derivative financial instrument depends on the investment advisor s ability to predict pertinent market movements accurately, which cannot be assured. The use of these instruments may result in losses greater than if they had not been used, may limit the amount of appreciation a Trust can realize on an investment and/or may result in lower distributions paid to shareholders. The Trusts investments in these instruments, if any, are discussed in detail in the Notes to Financial Statements.

<sup>&</sup>lt;sup>2</sup> Included in the related net change in unrealized appreciation (depreciation) in the Statements of Operations.

<sup>&</sup>lt;sup>3</sup> Any difference between net change in unrealized appreciation (depreciation) and net change in unrealized appreciation (depreciation) on derivative financial instruments still held at April 30, 2016 is generally due to derivative financial instruments s no longer held or categorized as Level 3 at period end. The Trust s investments that are categorized as Level 3 were valued utilizing third party pricing information without adjustment. Such valuations are based on unobservable inputs. A significant change in third party information could result in a significantly lower or higher value of such Level 3 investments.
