Any return you receive on the securities and whether they are automatically called will depend on the performance of the Fund

Automatic Call. If the fund closing price of the Fund on any call date is greater than or equal to the starting price, the securities will be automatically called, and on the related call settlement date, you will receive the original offering price plus the call premium applicable to that call date

Hypothetical Payout Profile

The profile to the right illustrates the potential payment on the securities for a range of hypothetical percentage changes in the fund closing price of the Fund from the pricing date to the applicable call date (including the final calculation day). The profile is based on a call premium of 7.05% for the first call date, 14.10% for the second call date and 21.15% for the final call date and a threshold price equal to 90% of the starting price.

This profile has been prepared for purposes of illustration only. Your actual return will depend on (i) whether the securities are automatically called; (ii) if the securities are automatically called, the actual call date on which the securities are called; (iii) if the securities are not automatically called, the actual ending price of the Fund; and (iv) whether you hold your securities to maturity or earlier automatic call.

Hypothetical Returns

If the securities are automatically called:

Each security has an original offering price of \$1,000.

Assumes a hypothetical starting price of \$100.00. The hypothetical starting price of \$100.00 has been chosen for illustrative purposes only and does not represent the actual starting price. The actual starting price is set forth under Summary of Terms above. For historical data regarding the actual closing prices of the Fund, see the historical information set forth under the section titled The Financial Select Sector SPDR Fund in the accompanying pricing supplement. Each security has an original offering price of \$1,000.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you receive upon automatic call or at stated maturity and the resulting pre-tax rate of return will depend on (i) whether the securities are automatically called; (ii) if the securities are automatically called, the actual call date on which the securities are called; and (iii) if the securities are not automatically called, the actual starting price and actual ending price.

⁽¹⁾ The annualized rates of return are calculated on a semi-annual bond equivalent basis with compounding.

Call Dates and Call Premiums

Call Date	Call Premium	Payment per Security upon an	
		Automatic Call	
May 7, 2019	7.05% of the original offering price	\$1,070.50	
May 7, 2020 April 30, 2021	14.10% of the original offering price	\$1,141.00	
(the final calculation day)	21.15% of the original offering price	\$1,211.50	

The last call date is the final calculation day, and payment upon an automatic call on the final calculation day, if applicable, will be made on the stated maturity date.

Any positive return on the securities will be limited to the applicable call premium, even if the fund closing price of the Fund significantly exceeds the starting price on the applicable call date. You will not participate in any appreciation of the Fund beyond the applicable call premium.

How The Maturity Payment Amount Is Calculated

If the securities are not automatically called prior to the final calcualtion day, then on the stated maturity date you will receive a cash payment per security equal to the maturity payment amount. The maturity payment amount per security will equal:

If the ending price is greater than or equal to the starting price: \$1,000 plus the call premium applicable to the final calculation day as described above under Call Dates and Call Premiums;

If the ending price is less than the starting price but greater than or equal to the threshold price: \$1,000; or

If the ending price is less than the threshold price: \$1,000 minus

If the securities are not automatically called prior to the final calculation day and the ending price is less than the threshold price, you will receive less, and possibly 90% less, than the original offering price of your securities at maturity.
