**Braskem signs memorandum of understanding with Pequiven**

*The objective is to evaluate business opportunities in Venezuela*

Braskem and Pequiven, the petrochemical arm of Venezuelan oil company PDVSA, have signed a memorandum of understanding to evaluate opportunities of developing business together in Venezuela within Braskem's strategic focus - thermoplastic resins. An agreement to this effect was signed within the context of the bilateral meeting of the presidents of Brasil, Luís Inácio Lula da Silva, and Venezuela, Hugo Chavez, which took place on February 14 of this year.

Access to raw materials with the appropriate quality, quantity and competitive cost is a strategic question for the petrochemical industry. Within this context, Venezuela offers major opportunities. It has the largest reserves of oil and natural gas in Latin America and occupies a strategic position in geographic and logistical terms compared to other international markets.

For its part, Braskem is studying the best alternatives for its sustained growth within a perspective of a strong increase in demand for thermoplastic resins on the domestic and regional markets and in line with its commitment to create value for its shareholders .

The studies to be carried out together with Pequiven are supplemental to the growth projects that already have been identified by Braskem, such as a new polypropylene plant in partnership with Petrobras in Paulínia (SP) and a new integrated polyethylene center on the Brazil-Bolivia border, based upon Bolivian gas. Braskem's eventual participation in these projects will be supported by its own generation of operating cash and loans from development banks and multilateral lending institutions.

Braskem, a world class Brazilian petrochemical company, is the leader in the thermoplastic resins segment in Latin America and is among the three largest Brazilian private industrial companies. The company operates 13 manufacturing plants located throughout Brazil, and it has an annual production capacity of 5.7 million tons of chemical and petrochemical products.
