Edgar Filing: ADVANCED SEMICONDUCTOR ENGINEERING INC - Form 20-F

(Name, Telephone, Email and/or Facsimile number and Address of Company Contact Person)

Securities registered or to be registered pursuant to Section 12(b) of the Act:

| Title of Each Class | Name of Each Exchange on which Registered |
|---|---|
| Common Shares, par value NT\$10.00 each | The New York Stock Exchange* |

*Traded in the form of American Depositary Receipts evidencing American Depositary Shares, each representing five Common Shares
(Title of Class)

Securities registered or to be registered pursuant to Section 12(g) of the Act:

None

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:

None
(Title of Class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report:

5,447,558,879 Common Shares, par value NT\$10 each**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the Registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards as issued by the International Accounting Standards Board Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow:

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

** As a result of the exercise of employee stock options and the conversion of our convertible bonds due September 2008 subsequent to December 31, 2007, as of May 30, 2008, we had 5,476,949,209 shares outstanding.

USE OF CERTAIN TERMS

All references herein to (i) the “Company”, “ASE Group”, “ASE Inc.”, “we”, “us”, or “our” are to Advanced Semiconductor Engineering, Inc. and, unless the context requires otherwise, its subsidiaries, (ii) “ASE Test” are to ASE Test Limited and its subsidiaries, (iii) “ASE Test Taiwan” are to ASE Test, Inc., a company incorporated under the laws of the ROC, (iv) “ASE Test Malaysia” are to ASE Electronics (M) Sdn. Bhd., a company incorporated under the laws of Malaysia, (v) “ISE Labs” are to ISE Labs, Inc., a corporation incorporated under the laws of the State of California, (vi) “Universal Scientific” are to Universal Scientific Industrial Co., Ltd., a company incorporated under the laws of the ROC, (vii) “ASE Material” are to ASE Material Inc., a company previously incorporated under the laws of the ROC that merged into ASE Inc. on August 1, 2004, (viii) “ASE Korea” are to ASE (Korea) Inc., a company incorporated under the laws of the Republic of Korea, (ix) “ASE Chung Li” are to ASE (Chung Li) Inc., a company previously incorporated under the laws of the ROC that merged into ASE Inc. on August 1, 2004, (x) “ASE Shanghai” are to ASE (Shanghai) Inc., a company incorporated under the laws of the PRC, (xi) “Hung Ching” are to Hung Ching Development & Construction Co. Ltd., a company incorporated under the laws of the ROC, (xii) “ASE Electronics” are to ASE Electronics Inc., a company incorporated under the laws of the ROC, (xiii) “Power ASE” are to Power ASE Technology, Inc., a company incorporated under the laws of the ROC, (xiv) “ASESH AT” are to ASE Assembly & Test (Shanghai) Limited, formerly known as Global Advanced Packaging Technology Limited, a company incorporated under the laws of the PRC, (xv) “GAPT” are to Global Advanced Packaging Technology Limited, now known as ASE Assembly & Test (Shanghai) Limited, a company incorporated under the laws of the PRC, (xvi) “ASE Japan” are to ASE Japan Co. Ltd., a company incorporated under the laws of Japan, (xvii) “ASEN” are to Suzhou ASEN Semiconductors Co., Ltd., a company incorporated under the laws of the PRC, (xviii) the “Securities Act” are to the U.S. Securities Act of 1933, as amended, and (xvix) the “Exchange Act” are to the U.S. Securities Exchange Act of 1934, as amended.

All references to the “Republic of China”, the “ROC” and “Taiwan” are to the Republic of China, including Taiwan and certain other possessions. All references to “Korea” or “South Korea” are to the Republic of Korea. All references to the “PRC” are to the People’s Republic of China and exclude Taiwan, Macau and Hong Kong.

We publish our financial statements in New Taiwan dollars, the lawful currency of the ROC. In this annual report, references to “United States dollars”, “U.S. dollars” and “US\$” are to the currency of the United States; references to “New Taiwan dollars”, “NT dollars” and “NT\$” are to the currency of the ROC; references to “RMB” are to the currency of the PRC; references to “JP¥” are to the currency of Japan; references to “EUR” are to the currency of the European Union; and references to “KRW” are to the currency of the Republic of Korea. Unless otherwise noted, all translations from NT dollars to U.S. dollars were made at the noon buying rate in The City of New York for cable transfers in NT dollars per U.S. dollar as certified for customs purposes by the Federal Reserve Bank of New York as of December 31, 2007, which was NT\$32.43=US\$1.00. All amounts translated into U.S. dollars in this annual report are provided solely for your convenience and no representation is made that the NT dollar or U.S. dollar amounts referred to herein could have been or could be converted into U.S. dollars or NT dollars, as the case may be, at any particular rate or at all. On May 30, 2008, the noon buying rate was NT\$30.37=US\$1.00.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This annual report on Form 20-F contains “forward-looking statements” within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act, including statements regarding our future results of operations and business prospects. Although these forward-looking statements, which may include statements regarding our future results of operations, financial condition or business prospects, are based on our own information and information from other sources we believe to be reliable, you should not place undue reliance on these forward-looking statements, which apply only as of the date of this annual report. We were not involved in the preparation of these projections. The words “anticipate”, “believe”, “estimate”, “expect”, “intend”, “plan” and similar expressions

as they relate to us, are intended to identify these forward-looking statements in this annual report. Our actual results of operations, financial condition or business prospects may differ materially from those expressed or implied in these forward-looking statements for a variety of reasons, including risks associated with cyclical and market conditions in the semiconductor industry; demand for the outsourced semiconductor packaging and testing services we offer and for such outsourced services generally; the highly competitive semiconductor industry; our ability to introduce new packaging, interconnect materials and testing technologies in order to remain competitive; international business activities; our business strategy; our future expansion plans and capital expenditures; the strained relationship between the ROC and the PRC; general economic and political conditions; possible disruptions in commercial activities caused by natural or human-induced disasters; fluctuations in foreign currency exchange rates; and other factors. For a discussion of these risks and other factors, see “Item 3. Key Information—Risk Factors.”

PART I

Item 1. Identity of Directors, Senior Management and Advisers

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information

SELECTED FINANCIAL DATA

The selected consolidated statement of operations data and cash flow data for the years ended December 31, 2005, 2006 and 2007, and the selected consolidated balance sheet data as of December 31, 2006 and 2007, set forth below are derived from our audited consolidated financial statements included in this annual report and should be read in conjunction with, and are qualified in their entirety by reference to, these consolidated financial statements. The selected consolidated statement of operations data and cash flow data for the years ended December 31, 2003 and 2004 and the selected consolidated balance sheet data as of December 31, 2003, 2004 and 2005 set forth below are derived from our audited consolidated financial statements not included in this annual report. Our consolidated financial statements have been prepared and presented in accordance with accounting principles generally accepted in the ROC, or ROC GAAP, which differ in some material respects from accounting principles generally accepted in the United States of America, or U.S. GAAP. See note 31 to our consolidated financial statements for a description of the significant differences between ROC GAAP and U.S. GAAP for the periods covered by these consolidated financial statements.

Table of Contents

- (1) As a result of our adoption of the ROC Statement of Financial Accounting Standards, or ROC SFAS, No. 34 “Financial Instruments: Recognition and Measurement”, and ROC SFAS No. 36, “Financial Instruments: Disclosure and Presentation” on January 1, 2006, the balances in 2004 and 2005 were reclassified to be consistent with the classification used in our consolidated financial statements for 2006. The balances in 2003 were not reclassified. See note 3 to our consolidated financial statements included in this annual report.
- (2) Represents an impairment charge of NT\$512.0 million relating to our long-term investment in our unconsolidated affiliate Universal Scientific.
- (3) Amount for 2005 includes income from discontinued operations of NT\$121.0 million and gain on disposal of discontinued operations of NT\$232.7 million, net of income tax expense. In October 2005, ASE Test disposed of its camera module assembly operations in Malaysia. Such operations were formerly classified as part of its packaging operations. Information in this annual report from our consolidated statements of operations for the years ended December 31, 2003, 2004 and 2005 has been adjusted to reflect the reclassification of ASE Test’s camera module assembly operations as discontinued operations. Information from our consolidated statements of cash flows was appropriately not adjusted.
- (4) Represents the cumulative effect of our change from using the weighted-average method to using the moving-average method to price our raw materials and supplies.
- (5) Represents the cumulative effect of our adoption of ROC SFAS No. 34 “Financial Instrument: Recognition and Measurement” and ROC SFAS, No. 36 “Financial Instruments: Disclosure and Presentation.” See note 3 to our consolidated financial statements included in this annual report.
- (6) The denominators for diluted earnings per common share and diluted earnings per equivalent ADS are calculated to account for the potential exercise of options and conversion of our convertible bonds into our common shares and American depositary shares, or ADSs.
- (7) Dividends per common share issued as a stock dividend.
- (8) Represents the weighted average number of shares after retroactive adjustments to give effect to stock dividends and employee stock bonuses. Beginning in 2002, common shares held by consolidated subsidiaries are classified for accounting purposes as “treasury stock”, and are deducted from the number of common shares outstanding.
- (9) Includes financial assets at fair value through profit or loss, available-for-sale financial assets and held-to-maturity financial assets.
- (10) Includes current portions of bonds payable, long-term bank loans and capital lease obligations.
- (11) Excludes current portions of bonds payable, long-term bank loans and capital lease obligations.
- (12) Includes current liabilities other than short-term borrowings.
- (13) Represents the cumulative effect of our adoption of U.S. SFAS No. 123R, “Share-Based Payment.” See note 32 to our consolidated financial statements included in this annual report.
- (14) Represents the weighted average number of common shares after retroactive adjustments to give effect to stock dividends.

Exchange Rates

Fluctuations in the exchange rate between NT dollars and U.S. dollars will affect the U.S. dollar equivalent of the NT dollar price of the common shares on the Taiwan Stock Exchange and, as a result, will likely affect the market price of the ADSs. Fluctuations will also affect the U.S. dollar conversion by the depositary under our ADS deposit agreement referred to below of cash dividends paid in NT dollars on, and the NT dollar proceeds received by the depositary from any sale of, common shares represented by ADSs, in each case, according to the terms of the deposit agreement dated September 29, 2000 and as amended and supplemented from time to time among us, Citibank N.A., as depositary, and the holders and beneficial owners from time to time of the ADSs, which we refer to as the deposit agreement.

The following table sets forth, for the periods indicated, information concerning the number of NT dollars for which one U.S. dollar could be exchanged based on the noon buying rate for cable transfers in NT dollars as certified for customs purposes by the Federal Reserve Bank of New York.

| | NT Dollars per U.S. Dollar Noon Buying Rate | | | |
|----------|---|-------|-------|------------|
| | Average | High | Low | Period-End |
| 2003 | 34.40 | 34.98 | 33.72 | 33.99 |
| 2004 | 33.37 | 34.16 | 33.10 | 33.24 |
| 2005 | 32.13 | 33.77 | 30.65 | 32.80 |
| 2006 | 32.51 | 33.31 | 31.28 | 32.59 |
| 2007 | 32.85 | 33.41 | 32.26 | 32.43 |
| December | 32.41 | 32.53 | 32.30 | 32.43 |

RISK FACTORS

Risks Relating to Our Business

Since we are dependent on the highly cyclical semiconductor industry and conditions in the markets for the end-use applications of our products, our revenues and net income may fluctuate significantly.

Our semiconductor packaging and testing business is affected by market conditions in the highly cyclical semiconductor industry. All of our customers operate in this industry, and variations in order levels from our customers and service fee rates may result in volatility in our revenues and net income. From time to time, the semiconductor industry has experienced significant, and sometimes prolonged, downturns. As our business is, and will continue to be, dependent on the requirements of semiconductor companies for independent packaging and testing services, any future downturn in the semiconductor industry would reduce demand for our services. For example, in the fourth quarter of 2000, a worldwide downturn resulted in a significant deterioration in the average selling prices of, as well as demand for, our services in 2001, and adversely affected our operating results in 2001. Although the semiconductor industry has experienced a recovery since 2002, we expect market conditions to continue to exert downward pressure on the average selling prices for our packaging and testing services. If we cannot reduce our costs or adjust our product mix to sufficiently offset any decline in average selling prices, our profitability will suffer and we may incur losses.

Market conditions in the semiconductor industry depend to a large degree on conditions in the markets for the end-use applications of semiconductor products, such as communications, computer and consumer electronics products. Any deterioration of conditions in the markets for the end-use applications of the semiconductors we package and test would reduce demand for our services, and would likely have a material adverse effect on our financial condition and results of operations. In 2005, approximately 37.0%, 29.3% and 30.9% of our net revenues were attributed to the packaging and testing of semiconductors used in communications, computer, and consumer electronics applications, respectively. In 2006, approximately 37.2%, 24.7% and 37.3% of our net revenues were attributed to the packaging and testing of semiconductors used in communications, computer, and consumer electronics applications,

respectively. In 2007, approximately 44.5%, 22.8% and 32.1% of our net revenues were attributed to the packaging and testing of semiconductors used in communications, computer, and consumer electronics applications, respectively. Each of the markets for end-use applications is subject to intense competition and significant shifts in demand, which could put pricing pressure on the packaging and testing services provided by us and adversely affect our revenues and net income.

Table of Contents

A reversal or slowdown in the outsourcing trend for semiconductor packaging and testing services could adversely affect our growth prospects and profitability.

In recent years, semiconductor manufacturers that have their own in-house packaging and testing capabilities, known as integrated device manufacturers, have increasingly outsourced stages of the semiconductor production process, including packaging and testing, to independent companies in order to reduce costs and shorten production cycles. In addition, the availability of advanced independent semiconductor manufacturing services has also enabled the growth of so-called “fabless” semiconductor companies that focus exclusively on design and marketing and outsource their manufacturing, packaging and testing requirements to independent companies. We cannot assure you that these integrated device manufacturers and fabless semiconductor companies will continue to outsource their packaging and testing requirements to third parties like us. A reversal of, or a slowdown in, this outsourcing trend could result in reduced demand for our services and adversely affect our growth prospects and profitability.

If we are unable to compete favorably in the highly competitive semiconductor packaging and testing markets, our revenues and net income may decrease.

The semiconductor packaging and testing markets are very competitive. We face competition from a number of sources, including other independent semiconductor packaging and testing companies, especially those that offer turnkey packaging and testing services. We believe that the principal competitive factors in the packaging and testing markets are:

- the ability to provide total solutions to our customers;
 - technological expertise;
- range of package types and testing platforms available;
- the ability to design and produce advanced and cost-competitive interconnect materials;
 - the ability to work closely with our customers at the product development stage;
 - responsiveness and flexibility;
 - production cycle time;
 - capacity;
 - production yield; and
 - price.

We face increasing competition from other packaging and testing companies, as most of our customers obtain packaging or testing services from more than one source. In addition, some of our competitors may have access to more advanced technologies and greater financial and other resources than we do. Although prices have stabilized, any renewed erosion in the prices for our packaging and testing services could cause our revenues and net income to decrease and have a material adverse effect on our financial condition and results of operations.

Our profitability depends on our ability to respond to rapid technological changes in the semiconductor industry.

The semiconductor industry is characterized by rapid increases in the diversity and complexity of semiconductors. As a result, we expect that we will need to constantly offer more sophisticated packaging and testing technologies and processes in order to respond to competitive industry conditions and customer requirements. If we fail to develop, or obtain access to, advances in packaging or testing technologies or processes, we may become less competitive and less profitable. In addition, advances in technology typically lead to declining average selling prices for semiconductors packaged or tested with older technologies or processes. As a result, if we cannot reduce the costs associated with our services, the profitability of a given service and our overall profitability may decrease over time.

Table of Contents

Our operating results are subject to significant fluctuations, which could adversely affect the market value of your investment.

Our operating results have varied significantly from period to period and may continue to vary in the future. Downward fluctuations in our operating results may result in decreases in the market price of the common shares and the ADSs. Among the more important factors affecting our quarterly and annual operating results are the following:

- changes in general economic and business conditions, particularly given the cyclical nature of the semiconductor industry and the markets served by our customers;
- our ability to quickly adjust to unanticipated declines or shortfalls in demand and market prices for our packaging and testing services, due to our high percentage of fixed costs;
 - changes in prices for our packaging and testing services;
 - volume of orders relative to our packaging and testing capacity;
 - changes in costs and availability of raw materials, equipment and labor;
 - timing of capital expenditures in anticipation of future orders;
- our ability to design and produce advanced and cost-competitive interconnect materials;
- fluctuations in the exchange rate between the NT dollar and foreign currencies, especially the U.S. dollar; and
- earthquakes, drought, epidemics and other natural disasters, as well as industrial and other incidents such as fires and power outages.

Due to the factors listed above, our future operating results or growth rates may be below the expectations of research analysts and investors. If so, the market price of the common shares and the ADSs, and thus the market value of your investment, may fall.

If we are not successful in maintaining and enhancing our in-house interconnect materials capabilities, our margins and profitability may be adversely affected.

We expect that interconnect materials will become an increasingly important value-added component of the semiconductor packaging business as technology migrates from the traditional wirebonding process towards the flip-chip wafer bumping process and interconnect materials such as advanced substrates represent a higher percentage of the cost of the packaging process. As a result, we expect that we will need to offer more advanced interconnect materials designs and production processes in order to respond to competitive industry conditions and customer requirements. In particular, our competitive position will depend to a significant extent on our ability to design and produce interconnect materials that are comparable to or better than those produced by independent suppliers and others. Many of these independent suppliers have dedicated greater resources than we have for the research and development and design and production of interconnect materials. In addition, we may not be able to acquire the technology and personnel that would enable us to further develop our in-house expertise and enhance our design and production capabilities. We have enhanced our interconnect materials capabilities through our operations originally conducted through ASE Material and now conducted through our wholly-owned subsidiary ASE Electronics and the operations of ASE Shanghai. For more information on our interconnect materials operations, see “Item 4. Information on the Company—Business Overview—Principal Products and Services—Packaging Services—Interconnect Materials.” If we

are unable to maintain and enhance our in-house interconnect materials expertise to offer advanced interconnect materials that meet the requirements of our customers, we may become less competitive and our margins and profitability may suffer as a result.

8

Table of Contents

Due to our high percentage of fixed costs, we will be unable to maintain our gross margin at past levels if we are unable to achieve relatively high capacity utilization rates.

Our operations, in particular our testing operations, are characterized by relatively high fixed costs. We expect to continue to incur substantial depreciation and other expenses in connection with our previous acquisitions of packaging and testing equipment and facilities. Our profitability depends not only on the pricing levels for our services, but also on utilization rates for our packaging and testing machinery and equipment, commonly referred to as “capacity utilization rates.” In particular, increases or decreases in our capacity utilization rates can significantly affect gross margins since the unit cost of packaging and testing services generally decreases as fixed costs are allocated over a larger number of units. In periods of low demand, we experience relatively low capacity utilization rates in our operations, which leads to reduced margins. For example, in 2001, we experienced lower than anticipated utilization rates in our operations due to a significant decline in worldwide demand for our packaging and testing services, which resulted in reduced margins during that period. Although our capacity utilization rates have improved, we cannot assure you that we will be able to maintain or surpass our past gross margin levels if we cannot consistently achieve or maintain relatively high capacity utilization rates.

If we are unable to manage our expansion effectively, our growth prospects may be limited and our future profitability may be affected.

We have significantly expanded our packaging and testing operations in recent years, and expect to continue to expand our operations in the future, including the expansion of our interconnect materials operations. In particular, we intend to provide total solutions for the packaging and testing of semiconductors in order to attract new customers and broaden our product range to include products packaged and tested for a variety of end-use applications. In the past, we have expanded through both internal growth and the acquisition of new operations. Rapid expansion puts strain on our managerial, technical, financial, operational and other resources. As a result of our expansion, we have implemented and will continue to need to implement additional operational and financial controls and hire and train additional personnel. Any failure to manage our growth effectively could lead to inefficiencies and redundancies and result in reduced growth prospects and profitability.

Because of the highly cyclical nature of our industry, our capital requirements are difficult to plan. If we cannot obtain additional capital when we need it, our growth prospects and future profitability may be adversely affected.

Our capital requirements are difficult to plan in our highly cyclical and rapidly changing industry. We will need capital to fund the expansion of our facilities as well as fund our research and development activities in order to remain competitive. We believe that our existing cash, marketable securities, expected cash flow from operations and existing credit lines under our loan facilities will be sufficient to meet our capital expenditures, working capital, cash obligations under our existing debt and lease arrangements, and other requirements for at least the next twelve months. However, future capacity expansions or market or other developments may cause us to require additional funds. Our ability to obtain external financing in the future is subject to a variety of uncertainties, including:

- our future financial condition, results of operations and cash flows;
- general market conditions for financing activities by semiconductor companies; and
- economic, political and other conditions in Taiwan and elsewhere.

If we are unable to obtain funding in a timely manner or on acceptable terms, our growth prospects and future profitability may decline.

Table of Contents

Restrictive covenants and broad default provisions in our existing debt agreements may materially restrict our operations as well as adversely affect our liquidity, financial condition and results of operations.

We are a party to numerous loan and other agreements relating to the incurrence of debt, many of which include restrictive covenants and broad default provisions. In general, covenants in the agreements governing our existing debt, and debt we may incur in the future, may materially restrict our operations, including our ability to incur debt, pay dividends, make certain investments and payments, other than in connection with restructurings of consolidated entities, and encumber or dispose of assets. In the event of a prolonged downturn in the demand for our services as a result of a downturn in the worldwide semiconductor industry or otherwise, we cannot assure you that we will be able to remain in compliance with our financial covenants which, as a result, may lead to a default. In addition, on May 30, 2008, we acquired, by way of a scheme of arrangement under Singapore law, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own, making ASE Test our wholly-owned subsidiary. See “Item 4. Information on the Company—History and Development of the Company—ASE Test Share Acquisition and Privatization.” To finance the transaction, we entered into two syndicated loan agreements in amounts of NT\$24,750.0 million and US\$200.0 million, which may make it more difficult for us to maintain certain financial ratios or to incur additional debt to fund our operations, expansion or other initiatives. Furthermore, a default under one agreement by us or one of our subsidiaries may also trigger cross-defaults under our other agreements. In the event of default, we may not be able to cure the default or obtain a waiver on a timely basis. An event of default under any agreement governing our existing or future debt, if not cured or waived, could have a material adverse effect on our liquidity, financial condition and results of operations.

We have on occasion failed to comply with certain financial covenants in some of our loan agreements. Such non-compliance may also have, through broadly worded cross-default provisions, resulted in default under some of the agreements governing our other existing debt. For example, we failed to comply with certain debt ratios in some of our loan agreements as a result of additional borrowings to fund increased capital expenditures in 2004 without an increase in net income and as a result of the fire at our facilities in Chung Li, Taiwan in May 2005. By July 2005, we had either obtained waivers for, or refinanced on a long-term basis, all of the relevant loans, and are not in default under any of our existing debt. For these and other reasons, including our financial condition and our relationship with our lenders, no lender has to date sought and we do not believe that any of our lenders would seek to declare a default or enforce remedies in respect of our existing debt as a result of cross-default provisions or otherwise, although we cannot provide any assurance in this regard.

We depend on select personnel and could be affected by the loss of their services.

We depend on the continued service of our executive officers and skilled technical and other personnel. Our business could suffer if we lose the services of any of these personnel and cannot adequately replace them. Although some of these management personnel have entered into employment agreements with us, they may nevertheless leave before the expiration of these agreements. We are not insured against the loss of any of our personnel. In addition, we may be required to increase substantially the number of these employees in connection with our expansion plans, and there is intense competition for their services in the semiconductor industry. We may not be able to either retain our present personnel or attract additional qualified personnel as and when needed. In addition, we may need to increase employee compensation levels in order to attract and retain our existing officers and employees and the additional personnel that we expect to require. Furthermore, a portion of the workforce at our facilities in Taiwan are foreign workers employed by us under work permits which are subject to government regulations on renewal and other terms. Consequently, our business could also suffer if the Taiwan regulations relating to the employment of foreign workers were to become significantly more restrictive or if we are otherwise unable to attract or retain these workers at a reasonable cost.

Table of Contents

If we are unable to obtain additional packaging and testing equipment or facilities in a timely manner and at a reasonable cost, our competitiveness and future profitability may be adversely affected.

The semiconductor packaging and testing businesses are capital intensive and require significant investment in expensive equipment manufactured by a limited number of suppliers. The market for semiconductor packaging and testing equipment is characterized, from time to time, by intense demand, limited supply and long delivery cycles. Our operations and expansion plans depend on our ability to obtain a significant amount of such equipment from a limited number of suppliers. From time to time we have also leased certain equipment. We have no binding supply agreements with any of our suppliers and acquire our packaging and testing equipment on a purchase order basis, which exposes us to changing market conditions and other substantial risks. For example, shortages of capital equipment could result in an increase in the price of equipment and longer delivery times. Semiconductor packaging and testing also require us to operate sizeable facilities. If we are unable to obtain equipment or facilities in a timely manner, we may be unable to fulfill our customers' orders, which could adversely affect our growth prospects as well as financial condition and results of operations. See "Item 4. Information on the Company—Business Overview—Equipment."

Fluctuations in exchange rates could result in foreign exchange losses.

Currently, the majority of our revenues from packaging and testing services are denominated in U.S. dollars, with a portion denominated in NT dollars and Japanese yen. Our cost of revenues and operating expenses associated with packaging and testing services, on the other hand, are incurred in several currencies, primarily NT dollars and U.S. dollars, as well as, to a lesser extent, Korean won, Japanese yen, Malaysian ringgit and PRC renminbi. In addition, a substantial portion of our capital expenditures, primarily for the purchase of packaging and testing equipment, has been, and is expected to continue to be, denominated in U.S. dollars, with much of the remainder in Japanese yen. Fluctuations in exchange rates, primarily among the U.S. dollar, the NT dollar, the Japanese yen and the PRC renminbi, will affect our costs and operating margins. In addition, these fluctuations could result in exchange losses and increased costs in NT dollar and other local currency terms. Despite hedging and mitigating techniques implemented by us, fluctuations in exchange rates have affected, and may continue to affect, our financial condition and results of operations. We incurred foreign exchange gains of NT\$154.3 million, NT\$92.8 million and NT\$403.5 million (US\$12.4 million) in 2005, 2006 and 2007, respectively. See "Item 11. Quantitative and Qualitative Disclosures about Market Risk—Market Risk—Foreign Currency Exchange Rate Risk."

The loss of a large customer or disruption of our strategic alliance or other commercial arrangements with semiconductor foundries and providers of other complementary semiconductor manufacturing services may result in a decline in our revenues and profitability.

Although we have over 200 customers, we have derived and expect to continue to derive a large portion of our revenues from a small group of customers during any particular period due in part to the concentration of market share in the semiconductor industry. Our five largest customers together accounted for approximately 30.6%, 26.0% and 24.8% of our net revenues in 2005, 2006 and 2007, respectively. No customer accounted for more than 10% of our net revenues in 2005, 2006 and 2007. The demand for our services from a customer is directly dependent upon that customer's level of business activity, which could vary significantly from year to year. Our key customers typically operate in the cyclical semiconductor business and, in the past, have varied, and may vary in the future, order levels significantly from period to period. Some of these companies are relatively small, have limited operating histories and financial resources, and are highly exposed to the cyclicity of the industry. We cannot assure you that these customers or any other customers will continue to place orders with us in the future at the same levels as in past periods. The loss of one or more of our significant customers, or reduced orders by any one of them, and our inability to replace these customers or make up for such orders could adversely affect our revenues and profitability. In addition, we have in the past reduced, and may in the future be requested to reduce, our prices to limit the level of

order cancellations. Any price reduction would likely reduce our margins and profitability.

Our strategic alliance with Taiwan Semiconductor Manufacturing Company Limited, or TSMC, one of the world's largest dedicated semiconductor foundries, as well as our other commercial arrangements with providers of other complementary semiconductor manufacturing services, enable us to offer total semiconductor manufacturing solutions to our customers. This strategic alliance and any of our other commercial arrangements may be terminated at any time. A termination of this strategic alliance and other commercial arrangements, and our failure to enter into substantially similar alliances and commercial arrangements, may adversely affect our competitiveness and our revenues and profitability.

Table of Contents

Our revenues and profitability may decline if we are unable to obtain adequate supplies of raw materials in a timely manner and at a reasonable price.

Our packaging operations require that we obtain adequate supplies of raw materials on a timely basis. Shortages in the supply of raw materials experienced by the semiconductor industry have in the past resulted in occasional price increases and delivery delays. For example, in 1999 and the first half of 2000, the industry experienced a shortage in the supply of advanced substrates used in ball grid array, or BGA, packaging. Raw materials such as advanced substrates are prone to supply shortages since such materials are produced by a limited number of suppliers such as Phoenix Precision Technology Corporation, Kinsus Interconnect Technology Corporation, SMI Electronic Devices Inc. and Nanya Printed Circuit Board Corporation. Our operations originally conducted through ASE Material and now conducted through our wholly-owned subsidiary ASE Electronics and the operations of ASE Shanghai have improved our ability to obtain advanced substrates on a timely basis and at a reasonable cost. However, we do not expect that our internal interconnect materials operations will be able to meet all of our interconnect materials requirements. Consequently, we will remain dependent on market supply and demand for our raw materials. Recent increases in gold prices have also affected the price at which we have been able to purchase gold wire, one of the principal raw materials we use in our packaging processes. We cannot guarantee that we will not experience shortages in the near future or that we will be able to obtain adequate supplies of raw materials in a timely manner or at a reasonable price. Our revenues and net income could decline if we are unable to obtain adequate supplies of high quality raw materials in a timely manner or if there are significant increases in the costs of raw materials that we cannot pass on to our customers.

Any environmental claims or failure to comply with any present or future environmental regulations, as well as any fire or other industrial accident, may require us to spend additional funds and may materially and adversely affect our financial condition and results of operations.

We are subject to various laws and regulations relating to the use, storage, discharge and disposal of chemical by-products of, and water used in, our packaging and interconnect materials production processes. Although we have not suffered material environmental claims in the past, the failure to comply with any present or future regulations could result in the assessment of damages or imposition of fines against us, suspension of production or a cessation of our operations. New regulations could require us to acquire costly equipment or to incur other significant expenses that we may not be able to pass on to our customers. See “Item 4. Information on the Company—Business Overview—Raw Materials and Suppliers—Packaging.” Additionally, any failure on our part to control the use, or adequately restrict the discharge, of hazardous substances could subject us to future liabilities that may have a material adverse effect on our financial condition and results of operations.

Our controlling shareholders may take actions that are not in, or may conflict with, our public shareholders’ best interest.

Members of the Chang family own, directly or indirectly, a controlling interest in our outstanding common shares. See “Item 7. Major Shareholders and Related Party Transactions—Major Shareholders.” Accordingly, these shareholders will continue to have the ability to exercise a controlling influence over our business, including matters relating to:

- our management and policies;
- the timing and distribution of dividends; and
- the election of our directors and supervisors.

Members of the Chang family may take actions that you may not agree with or that are not in our or our public shareholders' best interests.

Table of Contents

We may be subject to intellectual property rights disputes, which could materially adversely affect our business.

Our ability to compete successfully and achieve future growth depends, in part, on our ability to develop and protect our proprietary technologies and to secure on commercially acceptable terms certain technologies that we do not own. We cannot assure you that we will be able to independently develop, obtain patents for, protect or secure from any third party, the technologies required for our packaging and testing services.

Our ability to compete successfully also depends, in part, on our ability to operate without infringing the proprietary rights of others. The semiconductor industry is characterized by frequent litigation regarding patent and other intellectual property rights. In January 2006, Tessera Inc. filed a suit against us and others alleging patent infringement. See “Item 8. Financial Information—Legal Proceedings.” Any litigation, whether as plaintiff or defendant and regardless of the outcome, is costly and diverts company resources.

Any of the foregoing could harm our competitive position and render us unable to provide some of our services operations.

We are an ROC company and, because the rights of shareholders under ROC law differ from those under U.S. law and the laws of certain other countries, you may have difficulty protecting your shareholder rights.

Our corporate affairs are governed by our Articles of Incorporation and by the laws governing corporations incorporated in the ROC. The rights of shareholders and the responsibilities of management and the members of the board of directors under ROC law are different from those applicable to a corporation incorporated in the United States and certain other countries. As a result, public shareholders of ROC companies may have more difficulty in protecting their interests in connection with actions taken by management or members of the board of directors than they would as public shareholders of a corporation in the United States or certain other countries.

We face risks associated with uncertainties in PRC laws and regulations.

We operate packaging and testing facilities in the PRC through our subsidiaries and joint ventures incorporated in the PRC. Under PRC laws and regulations, foreign investment projects, such as our subsidiaries and joint ventures, must obtain certain approvals from the relevant governmental authorities in the provinces or special economic zones in which they are located and, in some circumstances, from the relevant authorities in the PRC’s central government. Foreign investment projects must also comply with certain regulatory requirements. However, PRC laws and regulations are often subject to varying interpretations and means of enforcement, and additional approvals from the relevant governmental authorities may be required for the operations of our PRC subsidiaries and joint ventures. If required, we cannot assure you that we will be able to obtain these approvals in a timely manner, if at all. Because the PRC government holds significant discretion in determining matters relating to foreign investment, we cannot assure you that the relevant governmental authorities will not take action that is material and adverse to our PRC operations.

Any impairment charges may have a material adverse effect on our net income.

Under ROC GAAP and U.S. GAAP, we are required to evaluate our long-lived assets, including equipment and goodwill, for possible impairment at least annually or whenever there is an indication of impairment. If certain criteria are met, we are required to record an impairment charge.

With respect to long-lived assets, in 2005, we recognized a loss of NT\$13,479.1 million on damage to our property, plant and equipment caused by a fire at our facilities in Chung Li, Taiwan. In 2006, we reversed NT\$2,190.6 million of the impairment loss recognized in 2005 under ROC GAAP due to an increase in the estimated service potential of the relevant assets. In 2007, we recognized an impairment charge of NT\$816.2 million (US\$25.2 million) in

connection with our flip-chip substrate production line as a result of idle capacity caused by lack of demand for certain applications. We also recognized impairment charges on goodwill in 2004 in connection with our holdings in ASE Test and ISE Labs. As of December 31, 2007, goodwill under ROC GAAP and U.S. GAAP amounted to NT\$3,188.1 million (US\$98.3 million) and NT\$3,711.6 million (US\$114.4 million), respectively. See “Item 5. Operating and Financial Review and Prospects—Operating Results and Trend Information—Critical Accounting Policies and Estimates—Realizability of Long-Lived Assets” and “—Goodwill.”

Table of Contents

We are unable to estimate the extent and timing of any impairment charges for long-lived assets or goodwill for future years under ROC GAAP or U.S. GAAP, and we cannot give any assurance that impairment charges will not be required in periods subsequent to December 31, 2007. Any impairment charge could have a material adverse effect on our net income. The determination of an impairment charge at any given time is based significantly on our expected results of operations over a number of years in the future. As a result, an impairment charge is more likely to occur during a period in which our operating results and outlook are otherwise already depressed.

Risks Relating to Taiwan, ROC

Strained relations between the ROC and the PRC could negatively affect our business and the market value of your investment.

Our principal executive offices and our principal packaging and testing facilities are located in Taiwan and approximately 73.5%, 74.4% and 68.6% of our net revenues in 2005, 2006 and 2007, respectively, were derived from our operations in Taiwan. The ROC has a unique international political status. The government of the PRC asserts sovereignty over all of China, including Taiwan, and does not recognize the legitimacy of the ROC government. Although significant economic and cultural relations have been established in recent years between the ROC and the PRC, relations have often been strained and the PRC government has indicated that it may use military force to gain control over Taiwan in some circumstances, such as the declaration of independence by the ROC. Political uncertainty could adversely affect the prices of our common shares and ADSs. Relations between the ROC and the PRC and other factors affecting the political or economic conditions in Taiwan could have a material adverse effect on our financial condition and results of operations, as well as the market price and the liquidity of our common shares and ADSs.

Currently, we manufacture interconnect materials in the PRC through our wholly-owned subsidiary ASE Shanghai. We also provide wire bond packaging and testing services in the PRC through our subsidiaries, ASESAT, ASEN and ASE Weihai Inc. See “Item 4. Information on the Company—Organizational Structure—Our Consolidated Subsidiaries.” The ROC government currently restricts certain types of investments by ROC companies, including ourselves, in the PRC, including certain types of investments in facilities for the packaging and testing of semiconductors. In April 2006, these restrictions were amended to permit investments in facilities for certain less advanced wire bond packaging and testing services. We do not know when or if such laws and policies governing investment in the PRC will be amended, and we cannot assure you that such ROC investment laws and policies will permit us to make further investments in the PRC in the future that we consider beneficial to us. Our growth prospects and profitability may be adversely affected if we are restricted from making certain additional investments in the PRC and are not able to fully capitalize on the growth of the semiconductor industry in the PRC.

As a substantial portion of our business and operations is located in Taiwan, we are vulnerable to earthquakes, typhoons, drought and other natural disasters, as well as power outages and other industrial incidents, which could severely disrupt the normal operation of our business and adversely affect our results of operations.

Taiwan is susceptible to earthquakes and has experienced severe earthquakes which caused significant property damage and loss of life, particularly in the central and eastern parts of Taiwan. Earthquakes have damaged production facilities and adversely affected the operations of many companies involved in the semiconductor and other industries. We have never experienced structural damage to our facilities or damage to our machinery and equipment as a result of these earthquakes. In the past, however, we have experienced interruptions to our production schedule primarily as a result of power outages caused by earthquakes.

Taiwan is also susceptible to typhoons, which may cause damage and business interruptions to companies with facilities located in Taiwan. In the third quarter of 2004, a typhoon caused a partial interruption for approximately two weeks in our water supply at ASE Chung Li's substrate operations.

Table of Contents

Taiwan has experienced severe droughts in the past. Although we have not been directly affected by droughts, we are dependent upon water for our packaging and substrates operations and a drought could interrupt such operations. In addition, a drought could interrupt the manufacturing process of the foundries located in Taiwan, in turn disrupting some of our customers' production, which could result in a decline in the demand for our services. In addition, the supply of electrical power in Taiwan, which is primarily provided by Taiwan Power Company, the state-owned electric utility, is susceptible to disruption that could be prolonged and frequent, caused by overload as a result of high demand or other reasons.

Our production facilities as well as many of our suppliers and customers and providers of complementary semiconductor manufacturing services, including foundries, are located in Taiwan. If our customers are affected by an earthquake, a typhoon, a drought or any other natural disasters, or power outage or other industrial incidents, it could result in a decline in the demand for our packaging and testing services. If our suppliers or providers of complementary semiconductor manufacturing services are affected, our production schedule could be interrupted or delayed. As a result, a major earthquake, typhoon, drought, or other natural disaster in Taiwan, or a power outage or other industrial incident could severely disrupt the normal operation of our business and have a material adverse effect on our financial condition and results of operations.

Any outbreak of avian flu or recurrence of SARS or other contagious disease may have an adverse effect on the economies and financial markets of certain Asian countries and may adversely affect our results of operations.

The World Health Organization, or WHO, reported in January 2005 that "during 2004, large parts of Asia experienced unprecedented outbreaks of highly pathogenic avian influenza, caused by the H5N1 virus", which moved the world closer than at any time since 1968 to an influenza pandemic "with high morbidity, excess mortality, and social and economic disruption." There have continued to be cases of outbreaks of avian flu in certain regions of Asia, Europe and Africa with human casualties reported in countries such as Azerbaijan, Cambodia, Egypt, Indonesia, Iraq, the PRC, Thailand, Turkey and Vietnam. Additionally, in the first half of 2003, the PRC, Hong Kong, Taiwan, Singapore, Vietnam and certain other countries encountered an outbreak of severe acute respiratory syndrome, or SARS, which is a highly contagious form of atypical pneumonia. The SARS outbreak had an adverse effect on our results of operations for the first half of 2003, primarily due to the lower than expected demand for our packaging and testing services that resulted from the adverse effect of such SARS outbreak on the level of economic activity in the affected regions. There is no guarantee that an outbreak of avian flu, SARS or other contagious disease will not occur again in the future and that any future outbreak of avian flu, SARS or other contagious disease or the measures taken by the governments of the ROC, Hong Kong, the PRC or other countries against such potential outbreaks, will not seriously interrupt our production operations or those of our suppliers and customers, which may have a material adverse effect on our results of operations. The perception that an outbreak of avian flu, SARS or other contagious disease may occur again may have an adverse effect on the economic conditions of certain countries in Asia.

Risks Relating to Ownership of the ADSs

The market for the common shares and the ADSs may not be liquid.

Active, liquid trading markets generally result in lower price volatility and more efficient execution of buy and sell orders for investors, compared to less active and less liquid markets. Liquidity of a securities market is often a function of the volume of the underlying shares that are publicly held by unrelated parties.

There has been no trading market for the common shares outside the ROC and the only trading market for the common shares will be the Taiwan Stock Exchange. The outstanding ADSs are listed on the New York Stock Exchange. There is no assurance that the market for the common shares or the ADSs will be active or liquid.

Although ADS holders are entitled to withdraw the common shares underlying the ADSs from the depositary at any time, ROC law requires that the common shares be held in an account in the ROC or sold for the benefit of the holder on the Taiwan Stock Exchange. In connection with any withdrawal of common shares from our ADS facility, the ADSs evidencing these common shares will be cancelled. Unless additional ADSs are issued, the effect of withdrawals will be to reduce the number of outstanding ADSs. If a significant number of withdrawals are effected, the liquidity of our ADSs will be substantially reduced. We cannot assure you that the ADS depositary will be able to arrange for a sale of deposited shares in a timely manner or at a specified price, particularly during periods of illiquidity or volatility.

Table of Contents

If a non-ROC holder of ADSs withdraws common shares, such holder of ADSs will be required to appoint a tax guarantor, local agent and custodian bank in the ROC and register with the Taiwan Stock Exchange in order to buy and sell securities on the Taiwan Stock Exchange.

When a non-ROC holder of ADSs elects to withdraw common shares represented by ADSs, such holder of the ADSs will be required to appoint an agent for filing tax returns and making tax payments in the ROC. Such agent will be required to meet the qualifications set by the ROC Ministry of Finance and, upon appointment, becomes the guarantor of the withdrawing holder's tax payment obligations. Evidence of the appointment of a tax guarantor, the approval of such appointment by the ROC tax authorities and tax clearance certificates or evidentiary documents issued by such tax guarantor may be required as conditions to such holder repatriating the profits derived from the sale of common shares. We cannot assure you that a withdrawing holder will be able to appoint and obtain approval for a tax guarantor in a timely manner.

In addition, under current ROC law, such withdrawing holder is required to register with the Taiwan Stock Exchange and appoint a local agent in the ROC to, among other things, open a bank account and open a securities trading account with a local securities brokerage firm, pay taxes, remit funds and exercise such holder's rights as a shareholder. Furthermore, such withdrawing holder must appoint a local bank to act as custodian for confirmation and settlement of trades, safekeeping of securities and cash proceeds and reporting and declaration of information. Without satisfying these requirements, non-ROC withdrawing holders of ADSs would not be able to hold or otherwise subsequently sell the common shares on the Taiwan Stock Exchange or otherwise.

The market value of your investment may fluctuate due to the volatility of the ROC securities market.

The trading price of our ADSs may be affected by the trading price of our common shares on the Taiwan Stock Exchange. The ROC securities market is smaller and more volatile than the securities markets in the United States and in many European countries. The Taiwan Stock Exchange has experienced substantial fluctuations in the prices and volumes of sales of listed securities and there are currently limits on the range of daily price movements on the Taiwan Stock Exchange. The Taiwan Stock Exchange Index peaked at 12,495.3 in February 1990, and subsequently fell to a low of 2,560.5 in October 1990. On March 13, 2000, the Taiwan Stock Exchange Index experienced a 617-point drop, which represented the single largest decrease in the Taiwan Stock Exchange Index in its history. During the period from January 1, 2007 to December 31, 2007, the Taiwan Stock Exchange Index peaked at 9,809.9 on October 29, 2007, and reached a low of 7,344.6 on March 5, 2007. Over the same period, daily closing values of our common shares ranged from NT\$29.60 per share to NT\$48.80 per share. On May 30, 2008, the Taiwan Stock Exchange Index closed at 8,619.08, and the closing value of our common shares was NT\$31.90 per share.

The Taiwan Stock Exchange is particularly volatile during times of political instability, including when relations between Taiwan and the PRC are strained. Several investment funds affiliated with the ROC government have also from time to time purchased securities from the Taiwan Stock Exchange to support the trading level of the Taiwan Stock Exchange. Moreover, the Taiwan Stock Exchange has experienced problems such as market manipulation, insider trading and settlement defaults. The recurrence of these or similar problems could have an adverse effect on the market price and liquidity of the securities of ROC companies, including our common shares and ADSs, in both the domestic and international markets.

Holders of common shares and ADSs may incur dilution as a result of the practice among ROC technology companies of issuing stock bonuses and stock options to employees.

Similar to other ROC technology companies, we issue bonuses from time to time in the form of common shares valued at par under our employee stock bonus plan. In addition, under the revised ROC Company Law we may, upon

approval from our board of directors and the ROC Securities and Futures Bureau of the Financial Supervisory Commission, Executive Yuan (formerly known as the Securities and Futures Commission), establish employee stock option plans. We currently maintain three employee stock option plans pursuant to which our full-time employees and the full-time employees of our domestic and foreign subsidiaries are eligible to receive stock option grants. As of December 31, 2007, 295,747,950 options were outstanding. See “Item 6. Directors, Senior Management and Employees—Compensation—ASE Inc. Employee Bonus and Stock Option Plans.” The issuance of our common shares pursuant to stock bonuses or stock options may have a dilutive effect on the holders of outstanding common shares and ADSs.

Table of Contents

Restrictions on the ability to deposit our common shares into our ADS facility may adversely affect the liquidity and price of our ADSs.

The ability to deposit common shares into our ADS facility is restricted by ROC law. A significant number of withdrawals of common shares underlying our ADSs would reduce the liquidity of the ADSs by reducing the number of ADSs outstanding. As a result, the prevailing market price of our ADSs may differ from the prevailing market price of our common shares on the Taiwan Stock Exchange. Under current ROC law, no person or entity, including you and us, may deposit our common shares in our ADS facility without specific approval of the ROC Financial Supervisory Commission, Executive Yuan, unless:

(1) we pay stock dividends on our common shares;

(2) we make a free distribution of common shares;

(3) holders of ADSs exercise preemptive rights in the event of capital increases; or

(4) to the extent permitted under the deposit agreement and the relevant custody agreement, investors purchase our common shares, directly or through the depository, on the Taiwan Stock Exchange, and deliver our common shares to the custodian for deposit into our ADS facility, or our existing shareholders deliver our common shares to the custodian for deposit into our ADS facility.

With respect to item (4) above, the depository may issue ADSs against the deposit of those common shares only if the total number of ADSs outstanding following the deposit will not exceed the number of ADSs previously approved by the ROC Financial Supervisory Commission, Executive Yuan plus any ADSs issued pursuant to the events described in subparagraphs (1), (2) and (3) above.

In addition, in the case of a deposit of our common shares requested under item (4) above, the depository will refuse to accept deposit of our common shares if such deposit is not permitted under any legal, regulatory or other restrictions notified by us to the depository from time to time, which restrictions may include blackout periods during which deposits may not be made, minimum and maximum amounts and frequency of deposits.

The depository will not offer holders of ADSs preemptive rights unless the distribution of both the rights and the underlying common shares to our ADS holders are either registered under the Securities Act or exempt from registration under the Securities Act.

Holders of ADSs will not have the same voting rights as our shareholders, which may affect the value of their ADSs.

The voting rights of a holder of ADSs as to the common shares represented by its ADSs are governed by the deposit agreement. Holders of ADSs will not be able to exercise voting rights on an individual basis. If holders representing at least 51% of the ADSs outstanding at the relevant record date instruct the depository to vote in the same manner regarding a resolution, including the election of directors and supervisors, the depository will cause all common shares represented by the ADSs to be voted in that manner. If the depository does not receive timely instructions representing at least 51% of the ADSs outstanding at the relevant record date to vote in the same manner for any resolution, including the election of directors and supervisors, holders of ADSs will be deemed to have instructed the depository or its nominee to authorize all the common shares represented by the ADSs to be voted at the discretion of our chairman or his designee, which may not be in the interest of holders of ADSs. Moreover, while shareholders who own 1% or more of our outstanding shares are entitled to submit one proposal to be considered at our annual general meetings of shareholders, only holders representing at least 51% of our ADSs outstanding at the relevant record date

are entitled to submit one proposal to be considered at our annual general meetings of shareholders. Hence, only one proposal may be submitted on behalf of all ADS holders.

Table of Contents

The right of holders of ADSs to participate in our rights offerings is limited, which could cause dilution to your holdings.

We may from time to time distribute rights to our shareholders, including rights to acquire our securities. Under the deposit agreement, the depository will not offer holders of ADSs those rights unless both the distribution of the rights and the underlying securities to all our ADS holders are either registered under the Securities Act or exempt from registration under the Securities Act. Although we may be eligible to take advantage of certain exemptions under the Securities Act available to certain foreign issuers for rights offerings, we can give no assurances that we will be able to establish an exemption from registration under the Securities Act, and we are under no obligation to file a registration statement for any of these rights. Accordingly, holders of ADSs may be unable to participate in our rights offerings and may experience dilution of their holdings.

If the depository is unable to sell rights that are not exercised or not distributed or if the sale is not lawful or reasonably practicable, it will allow the rights to lapse, in which case holders of ADSs will receive no value for these rights.

Changes in exchange controls which restrict your ability to convert proceeds received from your ownership of ADSs may have an adverse effect on the value of your investment.

Under current ROC law, the depository, without obtaining approvals from the Central Bank of the Republic of China (Taiwan) or any other governmental authority or agency of the ROC, may convert NT dollars into other currencies, including U.S. dollars, for:

- the proceeds of the sale of common shares represented by ADSs or received as stock dividends from the common shares and deposited into the depository receipt facility; and
 - any cash dividends or distributions received from the common shares.

In addition, the depository may also convert into NT dollars incoming payments for purchases of common shares for deposit in the ADS facility against the creation of additional ADSs. The depository may be required to obtain foreign exchange approval from the Central Bank of the Republic of China (Taiwan) on a payment-by-payment basis for conversion from NT dollars into foreign currencies of the proceeds from the sale of subscription rights for new common shares. Although it is expected that the Central Bank of the Republic of China (Taiwan) will grant this approval as a routine matter, we cannot assure you that in the future any approval will be obtained in a timely manner, or at all.

Under current ROC law, a holder of the ADSs, without obtaining further approval from the Central Bank of the Republic of China (Taiwan), may convert from NT dollars into other currencies, including U.S. dollars, the following:

- the proceeds of the sale of any underlying common shares withdrawn from the depository receipt facility or received as a stock dividend that has been deposited into the depository receipt facility; and
 - any cash dividends or distribution received from the common shares.

However, such holder may be required to obtain foreign exchange approval from the Central Bank of the Republic of China (Taiwan) on a payment-by-payment basis for conversion from NT dollars into foreign currencies of the proceeds from the sale of subscription rights for new common shares. Although the Central Bank of the Republic of China (Taiwan) is generally expected to grant this approval as a routine matter, we cannot assure you that you will actually obtain this approval in a timely manner, or at all.

Under the ROC Foreign Exchange Control Law, the Executive Yuan of the ROC government may, without prior notice but subject to subsequent legislative approval, impose foreign exchange controls in the event of, among other things, a material change in international economic conditions. We cannot assure you that foreign exchange controls or other restrictions will not be introduced in the future.

Table of Contents

The value of your investment may be reduced by possible future sales of common shares or ADSs by us or our shareholders.

While we are not aware of any plans by any major shareholders to dispose of significant numbers of common shares, we cannot assure you that one or more existing shareholders or owners of securities convertible or exchangeable into or exercisable for our common shares or ADSs will not dispose of significant numbers of common shares or ADSs. In addition, several of our subsidiaries and affiliates hold common shares, depositary shares representing common shares and options to purchase common shares or ADSs. We or they may decide to sell those securities in the future. See “Item 7. Major Shareholders and Related Party Transactions—Major Shareholders” for a description of our significant shareholders and affiliates that hold our common shares.

We cannot predict the effect, if any, that future sales of common shares or ADSs, or the availability of common shares or ADSs for future sale, will have on the market price of the common shares or the ADSs prevailing from time to time. Sales of substantial numbers of common shares or ADSs in the public market, or the perception that such sales may occur, could depress the prevailing market prices of the common shares or the ADSs.

Item 4. Information on the Company

HISTORY AND DEVELOPMENT OF THE COMPANY

Advanced Semiconductor Engineering, Inc. was incorporated on March 23, 1984 as a company limited by shares under the ROC Company Law, with facilities in the Nantze Export Processing Zone located in Kaohsiung, Taiwan. We were listed on the Taiwan Stock Exchange in 1989. Our principal executive offices are located at 26 Chin Third Road, Nantze Export Processing Zone, Nantze, Kaohsiung, Taiwan, ROC and our telephone number at the above address is (886) 7361-7131. Our common shares have been listed on the Taiwan Stock Exchange under the symbol “2311” since July 1989 and ADSs representing our common shares have been listed on the New York Stock Exchange under the symbol “ASX” since September 2000.

Acquisition of ASESH AT

On January 11, 2007, we completed the acquisition of 100.0% of GAPTECH, now known as ASESH AT, for a purchase price of US\$60.0 million. Based in Shanghai, China, ASESH AT provides wire bond packaging and testing services for a wide range of semiconductors.

Joint Venture with NXP Semiconductors

On September 25, 2007, we entered into a joint venture with NXP B.V., or NXP Semiconductors, formerly known as Philips Semiconductors, by completing the acquisition of 60.0% of ASEN, formerly known as NXP Semiconductors Suzhou Ltd., from NXP Semiconductors for a purchase price of US\$21.6 million. NXP Semiconductors holds the remaining 40.0% of ASEN. ASEN is based in Suzhou, China and is engaged in semiconductor packaging and testing.

Acquisition of ASE Weihai Inc.

On May 14, 2008, we completed the acquisition of 100.0% of Weihai Aimhigh Electronic Co. Ltd., now known as ASE Weihai Inc., from Aimhigh Global Corp. and TCC Steel for a purchase price of US\$7.0 million. ASE Weihai Inc. is based in Shandong, China and is engaged in semiconductor packaging and testing.

ASE Test Share Acquisition and Privatization

On September 4, 2007, we and ASE Test entered into a scheme implementation agreement under which we agreed to acquire, by way of a scheme of arrangement under Section 210 of the Companies Act, Chapter 50 of Singapore, or the Scheme, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own. We sought to effect the Scheme in order to simplify our organizational structure, reduce costs and administrative burdens associated with filing and compliance requirements relating to ASE Test's Nasdaq Global Market and Taiwan Stock Exchange listings and public company reporting obligations, enhance our brand recognition through the promotion of a single common brand, and increase our flexibility in making investments and allocating resources among our subsidiaries.

Table of Contents

We reached an agreement with ASE Test on the terms of the Scheme following an evaluation by a special committee of ASE Test's board of directors, comprised of two of ASE Test's independent directors, that was established to, among other things, review, evaluate, negotiate and consider all matters arising in connection with the Scheme. The Scheme was unanimously approved on our behalf by our board of directors and unanimously approved by ASE Test's independent directors at the recommendation of ASE Test's special committee. On May 6, 2008, the Scheme was approved by a majority of ASE Test's shareholders (other than us or our affiliates) present and voting, either in person or by proxy, at the shareholders meeting, who represented not less than 75% in value of the shares held by shareholders (other than us or our affiliates) present and voting, either in person or by proxy, at the shareholders meeting. The Scheme became effective on May 30, 2008 and ASE Test became our wholly-owned subsidiary. On June 12, 2008, ASE Test's ordinary shares were delisted from the Nasdaq Global Market. ASE Test's shares will be deregistered under the Exchange Act effective September 10, 2008 and its reporting obligations thereunder are currently suspended. The delisting of ASE Test's depository shares from the Taiwan Stock Exchange is currently expected to occur in mid-July, pending ROC regulatory approval.

Pursuant to the terms of the scheme implementation agreement, each ASE Test shareholder (other than us and our subsidiaries) received US\$14.78 in cash for each ASE Test ordinary share held by the shareholder and listed on the Nasdaq Global Market, and NT\$5.6314, the New Taiwan dollar equivalent of US\$0.185 in cash based on the exchange rate as of May 29, 2008, for each ASE Test depository share (representing 0.0125 ASE Test ordinary shares) held by the shareholder and listed on the Taiwan Stock Exchange. This acquisition price was a 25.6% premium above ASE Test's closing price on the Nasdaq Global Market as of August 31, 2007, and was determined after arm's length negotiations between us and the special committee of ASE Test's board of directors.

Also pursuant to the terms of the scheme implementation agreement, each ASE Test option exercisable for ASE Test ordinary shares (whether or not vested) that had a per share exercise price lower than US\$14.78 was deemed to have been exercised by ASE Test on behalf of the option holder on a cashless basis. We then acquired these newly issued ASE Test ordinary shares for US\$14.78 per share in cash. As a result, each of these option holders received a cash payment per share equal to the excess of US\$14.78 over the per share exercise price of their options, less any interest, fees and charges. Each ASE Test option that had a per share exercise price equal to or higher than US\$14.78 was cancelled without any payment to the option holder.

Through this transaction, we acquired a total of 58,438,944 shares of ASE Test, 7,843,663 of which were acquired from the mandatory option exercise. The total transaction value of the Scheme was US\$863.9 million. In order to finance our acquisition of ASE Test's shares, we entered into two syndicated loan agreements for term loan facilities of NT\$24,750.0 million and US\$200.0 million, respectively. For a further description of these agreements, see "Item 5. Operating and Financial Review and Prospects—Liquidity and Capital Resources."

For more information on the Scheme, see the Schedule 13E-3, as amended, filed by ASE Test with the United States Securities and Exchange Commission, or the SEC, on May 30, 2008.

For more information on our history and development, see "—Organizational Structure."

BUSINESS OVERVIEW

Together with our subsidiary ASE Test, we are the world's largest independent provider of semiconductor packaging and testing services based on 2007 revenues. Our services include semiconductor packaging, design and production of interconnect materials, front-end engineering testing, wafer probing and final testing services. We believe that, as a result of the following, we are better positioned than our competitors to meet the requirements of semiconductor companies worldwide for outsourced packaging and testing services across a wide range of end-use applications:

- our ability to provide a broad range of cost-effective semiconductor packaging and testing services on a large-scale turnkey basis in key centers of semiconductor manufacturing;
- our expertise in developing and providing cost-effective packaging, interconnect materials and testing technologies and solutions;

Table of Contents

- our scale of operations and financial position, which enable us to make significant investments in capacity expansion and research and development as well as to make selective acquisitions;
 - our geographic presence in key centers of outsourced semiconductor and electronics manufacturing; and
- our long-term relationships with providers of complementary semiconductor manufacturing services, including our strategic alliance with TSMC, one of the world's largest dedicated semiconductor foundries.

We believe that the trend for semiconductor companies to outsource their packaging and testing requirements is accelerating as semiconductor companies increasingly rely on independent providers of foundry and advanced packaging and testing services. In response to the increased pace of new product development and shortened product life and production cycles, semiconductor companies are increasingly seeking independent packaging and testing companies that can provide turnkey services in order to reduce time-to-market. We believe that our expertise and scale in advanced technology and our ability to integrate our broad range of solutions into turnkey services allow us to benefit from the accelerated outsourcing trend and better serve our existing and potential customers.

We believe that we have benefited, and will continue to benefit, from our geographic location in Taiwan. Taiwan is currently the largest center for outsourced semiconductor manufacturing in the world and has a high concentration of electronics manufacturing service providers, which are the end users of our customers' products. Our close proximity to foundries and other providers of complementary semiconductor manufacturing services is attractive to our customers who wish to take advantage of the efficiencies of a total semiconductor manufacturing solution by outsourcing several stages of their manufacturing requirements. Our close proximity to end users of our customers' products is attractive to our customers who wish to take advantage of the logistical efficiencies of direct shipment services that we offer. We believe that, as a result, we are well positioned to meet the advanced semiconductor engineering and manufacturing requirements of our customers.

Our global base of over 200 customers includes leading semiconductor companies across a wide range of end-use applications, such as:

- Altera Corporation
- ATI Technologies, Inc.
- Broadcom Corporation
- Cambridge Silicon Radio Limited
- Conexant Systems, Inc.
- Freescale Semiconductor, Inc.
- Kawasaki Microelectronics, Inc
- Marvell Technology Group Ltd.
- Media Tek Inc.
- Microsoft Corporation
- NEC Electronics Corporation
- NVIDIA Corporation
- NXP Semiconductors
- Powerchip Semiconductor Corp.
- Qualcomm Incorporated
- RF Micro Devices, Inc.
- STMicroelectronics N.V.
- VIA Technologies, Inc.
- Zoran Corporation

Industry Background

General

Semiconductors are the basic building blocks used to create an increasing variety of electronic products and systems. Continuous improvements in semiconductor process and design technologies have led to smaller, more complex and more reliable semiconductors at a lower cost per function. These improvements have resulted in significant performance and price benefits to manufacturers of electronic products. As a result, semiconductor demand has grown

substantially in our primary end-user markets for communications, computers and consumer electronics, and has experienced increased growth in other markets such as automotive products and industrial automation and control systems.

The semiconductor industry is characterized by strong long-term growth, with periodic and sometimes severe cyclical downturns, most recently the industry downturn that began in the fourth quarter of 2000 and continued into 2002 in connection with a slowdown in the global economy, overcapacity in the semiconductor industry and worldwide inventory adjustment. The Semiconductor Industry Association estimates that worldwide sales of semiconductors increased from approximately US\$51 billion in 1990 to approximately US\$257.1 billion in 2007. We believe that the pattern of long-term growth and cyclical fluctuations will continue in the semiconductor industry.

Table of Contents

Outsourcing Trends in Semiconductor Manufacturing

Historically, semiconductor companies designed, manufactured, packaged and tested semiconductors primarily in their own facilities. Over the past several years, there has been a trend in the industry to outsource stages in the manufacturing process. Virtually every significant stage of the manufacturing process can be outsourced. Wafer foundry services and semiconductor packaging and testing services are currently the largest segments of the independent semiconductor manufacturing services market. Most of the world's major integrated device manufacturers use some independent manufacturing services to maintain a strategic mix of internal and external manufacturing capacity.

The availability of technologically advanced independent manufacturing services has also enabled the growth of "fabless" semiconductor companies that focus on semiconductor design and marketing and outsource their wafer fabrication, packaging and testing requirements to independent companies. We believe that the growth in the number and scale of fabless semiconductor companies that rely solely on independent companies to meet their manufacturing requirements will continue to be a driver of growth in the market for independent foundry, packaging and testing services. Similarly, the availability of technologically advanced independent manufacturing services has encouraged integrated device manufacturers, which had traditionally relied on in-house semiconductor manufacturing capacity, to increasingly outsource their manufacturing requirements to independent semiconductor manufacturing companies.

We believe the outsourcing of semiconductor manufacturing services will increase in the future from current levels for many reasons, including the following:

Technological Expertise and Significant Capital Expenditure. Semiconductor manufacturing processes have become highly complex, requiring substantial investment in specialized equipment and facilities and sophisticated engineering and manufacturing expertise. Technical expertise becomes increasingly important as the industry transitions from one generation of technology to another, as evidenced by the current migration of the fabrication process from 8-inches to 12-inches in sub-micron technology and the size of technology nodes fabricated from 65 nm to 45 nm, as well as the integration of different functions into a single-chip service. In addition, product life cycles have been shortening, magnifying the need to continuously upgrade or replace manufacturing equipment to accommodate new products. As a result, new investments in in-house packaging, testing and fabrication facilities are becoming less desirable to integrated device manufacturers because of the high investment costs as well as the inability to achieve sufficient economies of scale and utilization rates necessary to be competitive with the independent service providers. Independent packaging, testing and foundry companies, on the other hand, are able to realize the benefits of specialization and achieve economies of scale by providing services to a large base of customers across a wide range of products. This enables them to reduce costs and shorten production cycles through high capacity utilization and process expertise. In the process, they are also able to focus on discrete stages of semiconductor manufacturing and deliver services of superior quality.

In recent years, semiconductor companies have significantly reduced their investment in in-house packaging and testing technologies and capacity. As a result, some semiconductor companies may have limited in-house expertise and capacity to accommodate large orders following a recovery in demand, particularly in the area of advanced technology. On the other hand, some semiconductor companies with in-house packaging and testing operations focusing on low-end leadframe-based packages are under increasing pressure to rationalize these operations by relocating to locations with lower costs or better infrastructure, such as the PRC, in order to lower manufacturing costs and shorten production cycle time. We expect semiconductor companies to increasingly outsource their packaging and testing requirements to take advantage of the advanced technology and scale of operations of independent packaging and testing companies.

Table of Contents

Focus on Core Competencies. As the semiconductor industry becomes more competitive, semiconductor companies are expected to further outsource their semiconductor manufacturing requirements in order to focus their resources on core competencies, such as semiconductor design and marketing.

Time-to-Market Pressure. The increasingly short product life cycle has accelerated time-to-market pressure for semiconductor companies, leading them to rely increasingly on outsourced suppliers as a key source for effective manufacturing solutions.

Capitalize on the high growth rate in emerging markets. Emerging markets, and China in particular, have become both major manufacturing centers for the technology industry and growing markets for technology-based products. Thus, in order to gain direct access to the Chinese market, many semiconductor companies are seeking to establish manufacturing facilities in China by partnering with local subcontractors. As a result, certain stages of the semiconductor manufacturing process that were previously handled in-house will be increasingly outsourced in order to improve efficiency.

The Semiconductor Industry in Taiwan

The semiconductor industry in Taiwan has been a leader in, and a major beneficiary of, the trend in outsourcing. The growth of the semiconductor industry in Taiwan has been the result of several factors. First, semiconductor manufacturing companies in Taiwan typically focus on one or two stages of the semiconductor manufacturing process. As a result, these companies tend to be more efficient and are better able to achieve economies of scale and maintain higher capacity utilization rates. Second, semiconductor manufacturing companies in Taiwan that provide the major stages of the manufacturing process are located close to each other and typically enjoy close working relationships. This close network is attractive to customers who wish to outsource multiple stages of the semiconductor manufacturing process. For instance, a customer could reduce production cycle time and unit cost and streamline logistics by outsourcing its foundry, packaging, testing and drop shipment services to electronics manufacturing companies in Taiwan. Third, Taiwan also has an educated labor pool and a large number of engineers suitable for sophisticated manufacturing industries such as semiconductors.

As a result of the growth of the global semiconductor market, the semiconductor industry in Taiwan has in recent years made significant capital expenditures to expand capacity and technological capabilities. The ROC government has also provided tax incentives, long-term loans at favorable rates and research and development support, both directly and indirectly through support of research institutes and universities. As a result of investments made in recent years, Taiwan has achieved substantial market share in the outsourced semiconductor manufacturing industry. Furthermore, the growth of Taiwan's electronics manufacturing industry, particularly in personal computer, mobile handset and digital camera design and manufacturing, has created substantial local demand for semiconductors.

The Semiconductor Industry in Other Asian Regions

Many of the factors that contributed to the growth of the semiconductor industry in Taiwan have also contributed to the recent development of the semiconductor industry in Southeast Asia. Access to expanding semiconductor foundry services in Singapore, convenient proximity to major downstream electronics manufacturing operations in Malaysia, Singapore and Thailand, government-sponsored infrastructure support, tax incentives and pools of skilled engineers and labor at relatively low cost have all encouraged the development of back-end semiconductor service operations in Southeast Asia. The downstream electronics manufacturers in Southeast Asia have typically focused on products used in the communications, industrial and consumer electronics and personal computer peripheral sectors. The proximity to both semiconductor foundries and end users has influenced local and international semiconductor companies increasingly to obtain packaging, testing and drop shipment services from companies in Southeast Asia.

In addition, the world's leading electronics manufacturing service providers, many of them from Taiwan, are increasingly establishing manufacturing facilities in the PRC and Vietnam in order to take advantage of lower labor costs, government incentives for investment and the potential size of the domestic market for end users of electronics products. Many of the factors that contributed to the growth of the semiconductor industry in Taiwan are beginning to emerge in the PRC and may play an increasingly important role in the growth of its semiconductor industry over the long term.

Table of Contents

Overview of Semiconductor Manufacturing Process

The manufacturing of semiconductors is a complex process that requires increasingly sophisticated engineering and manufacturing expertise. The manufacturing process may be divided into the following stages from circuit design to shipment:

We are involved in all stages of the semiconductor manufacturing process except circuit design and wafer fabrication.

| Process | Description |
|----------------------------|--|
| Circuit Design | The design of a semiconductor is developed by laying out circuit components and interconnections. |
| Front-End Engineering Test | Throughout and following the design process, prototype semiconductors undergo front-end engineering testing, which involves software development, electrical design validation and reliability and failure analysis. |
| Wafer Fabrication | Process begins with the generation of a photomask through the definition of the circuit design pattern on a photographic negative, known as a mask, by an electron beam or laser beam writer. These circuit patterns are transferred to the wafers using various advanced processes. |
| Wafer Probe | Each individual die is electrically tested, or probed, for defects. Dies that fail this test are marked to be discarded. |

Table of Contents

| Process | Description |
|------------|--|
| Packaging | <p>Packaging, also called assembly, is the processing of bare semiconductors into finished semiconductors and serves to protect the die and facilitate electrical connections and heat dissipation. The patterned silicon wafers received from our customers are diced by means of diamond saws into separate dies, also called chips. Each die is attached to a leadframe or a laminate (plastic or tape) substrate by epoxy resin. A leadframe is a miniature sheet of metal, generally made of copper and silver alloys, on which the pattern of input/output leads has been cut. On a laminate substrate, typically used in BGA packages, the leads take the shape of small bumps or balls. Leads on the leadframe or the substrate are connected by extremely fine gold wires or bumps to the input/output terminals on the chips, through the use of automated machines known as “bonders.” Each chip is then encapsulated, generally in a plastic casing molded from a molding compound, with only the leads protruding from the finished casing, either from the edges of the package as in the case of the leadframe-based packages, or in the form of small bumps on a surface of the package as in the case of BGA or other substrate-based packages.</p> |
| Final Test | <p>Final testing is conducted to ensure that the packaged semiconductor meets performance specifications. Final testing involves using sophisticated testing equipment known as testers and customized software to electrically test a number of attributes of packaged semiconductors, including functionality, speed, predicted endurance and power consumption. The final testing of semiconductors is categorized by the functions of the semiconductors tested into logic/mixed-signal final testing and memory final testing. Memory final testing typically requires simpler test software but longer testing time per device tested.</p> |

Strategy

Our objective is to provide semiconductor packaging and testing services and interconnect materials design and production capabilities which set industry standards and to lead and facilitate the industry trend towards outsourcing semiconductor manufacturing requirements. The principal elements of our strategy are to:

Grow Our Advanced Packaging Services and Expand into the Legacy Packaging Market

We believe that an important factor in our ability to attract leading semiconductor companies as our customers has been our ability to fulfill demand for a broad range of packaging solutions on a large scale. We intend to continue to

develop process and product technologies to meet the requirements of clients using our advanced packaging services. Our expertise in packaging technology has enabled us to develop advanced solutions such as fine-pitch wire bonding, stacked die packaging and bump chip carrier packaging. We are continuously investing in research and development in response to and in anticipation of migrations in technology and intend to continue to acquire access to new technologies through strategic alliances and licensing arrangements.

Table of Contents

We also intend to expand our legacy leadframe-based packaging product offerings and services. We believe that our clients will continue to outsource their legacy packaging requirements. To capitalize on this trend, we plan to accelerate our single outline legacy packaging production in Shanghai and expand into the discrete packaging business by leveraging the existing assets of ASE Weihai Inc. in Shandong, China as well as our portfolio of clients.

The increasing miniaturization of semiconductors and the growing complexity of interconnect technology have also resulted in the blurring of the traditional distinctions among assembly at different levels of integration: chip, module, board and system. We currently provide module assembly services primarily at our facilities in Korea. Our interest in Universal Scientific has provided us with access to process and product technologies at the levels of module, board and system assembly and test, which helps us to better anticipate industry trends and take advantage of potential growth opportunities.

Strategically Expand Production Capacity

To capitalize on the growing demand for advanced and legacy packaging and testing services, we intend to strategically expand our production capacity, both through internal growth and through selective acquisitions and joint ventures, with a focus on providing cost competitive and innovative packaging and testing services.

For our advanced packaging and testing business, we intend to invest in trends that are essential to the development of the industry. We plan to expand our capacity for FC-CSP and system-in-a-package products to meet demand for smaller form factors, higher performance and higher packaging density. We believe rising commodity prices will expedite the migration from leadframe and BGA-based packaging to flip-chip packaging and wafer level packaging, as the cost differential narrows. We intend to increase our capacity for flip-chip packaging and wafer level packaging in order to cope with rising demand for these packaging technologies.

For our legacy packaging and testing business, we expect to focus on providing cost competitive services through our China operations by leveraging China's lower cost of labor and land and a rapidly growing end market. Our clients may also benefit from easier inventory management and savings in transportation costs and taxes by outsourcing their packaging and testing requirements to China. Through better management of capacity utilization and efficiency improvements, we plan to offer cost competitive legacy packaging and testing services on a large scale with the intention of driving more integrated device manufacturer outsourcing in the long-run.

We evaluate acquisition and joint venture opportunities on the basis of access to new markets and technology, the enhancement of our production capacity, economies of scale and management resources, and closer proximity to existing and potential customers. In July 2006, we entered into a joint venture with Powerchip, a DRAM manufacturer in Taiwan that focuses on the packaging and testing of memory semiconductors, in order to help develop our capabilities with respect to memory semiconductors and to benefit from future growth in the market for memory products. The joint venture began operations in December 2006. In January 2007, we completed the acquisition of GAPTEC, a company that provides wire bond packaging and testing services for a wide range of semiconductors. In February 2007, we and NXP Semiconductors formed a joint venture in Suzhou, China focused on semiconductor testing and packaging. We currently own a 60.0% interest in the joint venture. In May 2008, we completed the acquisition of ASE Weihai Inc., a company that also engages in semiconductor packaging and testing services.

Continue to Leverage Our Presence in Key Centers of Semiconductor and Electronics Manufacturing

We intend to continue leveraging our presence in key centers of semiconductor and electronics manufacturing to further grow our business. We have significant packaging and testing operations in Taiwan, currently the largest center for outsourced semiconductor manufacturing in the world. This presence enables our engineers to work closely

with our customers as well as foundries and other providers of complementary semiconductor manufacturing services early in the semiconductor design process, enhances our responsiveness to the requirements of our customers and shortens production cycles. In addition, as a turnkey service provider, we are able to offer in Taiwan packaging and testing services, including interconnect materials solutions, all within relatively close geographic proximity to our customers, complementary service providers and the end users of our customers' products. In addition to our current operations, we intend to expand our packaging, testing and interconnect materials operations in Chung Li, Taiwan to better serve our customers located in northern Taiwan and customers who request that we maintain the capability of packaging and testing their products at more than one location in Taiwan.

Table of Contents

In addition to our locations in Taiwan, we have operations in the following locations:

- 1 PRC — a fast-growing market for semiconductor manufacturing for domestic consumption and our primary site for serving legacy packaging clients;
- 1 Korea — an increasingly important center for the manufacturing of memory and communications devices with a concentration of integrated device manufacturers specializing in these products;
- 1 Malaysia and Singapore — an emerging center for outsourced semiconductor manufacturing in Southeast Asia with a concentration of integrated device manufacturers;
- 1 Silicon Valley in California — the preeminent center for semiconductor design, with a concentration of fabless customers; and
 - 1 Japan — an emerging market for semiconductor packaging and testing services as Japanese integrated device manufacturers increasingly outsource their semiconductor manufacturing requirements.

Strengthen and Develop Strategic Relationships with Providers of Complementary Semiconductor Manufacturing Services

We intend to strengthen existing, and develop new, strategic relationships with providers of other complementary semiconductor manufacturing services, such as foundries, as well as equipment vendors, raw material suppliers and technology research institutes, in order to offer our customers total semiconductor manufacturing solutions covering all stages of the manufacturing of their products from design to shipment.

Since 1997, we have maintained a strategic alliance with TSMC, currently one of the world's largest dedicated semiconductor foundries, which designates us as the non-exclusive preferred provider of packaging and testing services for semiconductors manufactured by TSMC. Through our strategic alliance with and close geographic proximity to TSMC, we are able to offer our customers a total semiconductor manufacturing solution that includes access to foundry services in addition to our packaging, testing and direct shipment services.

Principal Products and Services

We offer a broad range of advanced and legacy semiconductor packaging and testing services. Our package types employ either leadframes or substrates as interconnect materials. The semiconductors we package are used in a wide range of end-use applications, including communications, computers, consumer electronics, industrial, automotive and other applications. Our testing services include front-end engineering testing, which is performed during and following the initial circuit design stage of the semiconductor manufacturing process, wafer probe, final testing and other related semiconductor testing services. We focus on packaging and testing logic semiconductors. We offer our customers turnkey services which consist of packaging, testing and direct shipment of semiconductors to end users designated by our customers. In 2005, 2006 and 2007, our packaging revenues, including revenues from module assembly, accounted for 78.6%, 76.5% and 77.6% of our net revenues, respectively, and our testing revenues accounted for 20.4%, 21.3% and 19.8% of our net revenues, respectively.

Table of Contents

Packaging Services

We offer a broad range of package types to meet the requirements of our customers, with a focus on advanced packaging solutions. Within our portfolio of package types, we focus on the packaging of semiconductors for which there is expected to be strong demand. These include advanced leadframe-based package types such as quad flat package, thin quad flat package, bump chip carrier and quad flat no-lead package, and package types based on substrates, such as flip-chip BGA and other BGA types as well as other advanced packages such as wafer-bumping products. We are among the leaders in such advanced packaging processes and technologies and are well positioned to lead the technology migration in the semiconductor packaging industry.

The semiconductor packaging industry has evolved to meet the advanced packaging requirements of high-performance semiconductors. The development of high-performance electronics products has spurred the innovation of semiconductor packages that have higher interconnect density and better electrical performance. As a part of this technology migration, semiconductor packages have evolved from leadframe-based packages to substrate-based packages. The key differences of these package types are:

- the size of the package;
- the density of electrical connections the package can support; and
- the thermal and electrical characteristics of the package.

Leadframe-Based Packages. Leadframe-based packages are packaged by connecting the die, using wire bonders, to the leadframe with gold wire. As packaging technology improves, the number of leads per package increases. Packages have evolved from the lower pin-count plastic dual in-line packages to higher pin-count quad flat packages. In addition, improvements in leadframe-based packages have reduced the footprint of the package on the circuit board and improved the electrical performance of the package. The following table sets forth our principal leadframe-based packages.

| Package Types | Number of Leads | Description | End-Use Applications |
|---|-----------------|--|---|
| Quad Flat Package (QFP)/Thin Quad Flat Package (TQFP) | 44-256 | Designed for advanced processors and controllers, application-specific integrated circuits and digital signal processors. | Multimedia applications, cellular phones, personal computers, automotive and industrial products, hard disk drives, communication boards such as ethernet, integrated services digital network, and notebook computers. |
| Quad Flat No-Lead Package (QFN)/Microchip Carrier (MCC) | 12-84 | QFN, also known as MCC, uses half-encapsulation technology to expose the rear side of the die pad and the tiny fingers, which are used to connect the chip and bonding wire with printed circuit boards. | Cellular phones, wireless local access network, or wireless LAN, personal digital assistant devices and digital cameras. |
| Bump Chip Carrier (BCC) | 16-156 | | |

BCC packages use plating metal pads to connect with printed circuit boards, creating enhanced thermal and electrical performance. Cellular phones, wireless LAN, personal digital assistant devices and digital cameras.

Table of Contents

| Package Types | Number of Leads | Description | End-Use Applications |
|---|-----------------|--|---|
| Small Outline Plastic Package (SOP)/Thin Small Outline Plastic Package (TSOP) | 8-56 | Designed for memory devices including static random access memory, or SRAM, dynamic random access memory, or DRAM, fast static RAM, also called FSRAM, and flash memory devices. | Consumer audio/video and entertainment products, cordless telephones, pagers, fax machines, printers, copiers, personal computer peripherals, automotive parts, telecommunications products, recordable optical disks and hard disk drives. |
| Small Outline Plastic J-Bend Package (SOJ) | 20-44 | Designed for memory and low pin-count applications. | DRAM memory devices, microcontrollers, digital analog conversions and audio/video applications. |
| Plastic Leaded Chip Carrier (PLCC) | 28-84 | Designed for applications that do not require low-profile packages with high density of interconnects. | Personal computers, scanners, electronic games and monitors. |
| Plastic Dual In-line Package (PDIP) | 8-64 | Designed for consumer electronic products. | Telephones, televisions, audio/video applications and computer peripherals. |

Substrate-Based Packages. Substrate-based packages generally employ the BGA design, which utilizes a substrate rather than a leadframe. Whereas traditional leadframe technology places the electrical connection around the perimeter of the package, the BGA package type places the electrical connection at the bottom of the package surface in the form of small bumps or balls. These small bumps or balls are typically distributed evenly across the bottom surface of the package, allowing greater distance between individual leads and higher pin-counts.

The BGA package type was developed in response to the requirements of advanced semiconductors. The benefits of the BGA package type include:

- smaller package size;
- higher pin-count;
- greater reliability;
- superior electrical signal transmission; and
- better heat dissipation.

The industry demand for BGA packages has grown significantly in recent years. BGA packages are generally used in applications where size, density and performance are important considerations, such as cellular handsets and high pin-count graphic chipsets. Our expertise in BGA packages also includes capabilities in stacked-die BGA, which assembles multiple dies into a single package. As an extension to stacked-die BGA, we also assemble system-in-a-package products, which involve the integration of more than one chip into the same package. We believe

that we are among the leaders in these packaging technologies.

29

Table of Contents

We believe that there will continue to be growing demand for packaging solutions with increased input/output density, smaller size and better heat dissipation characteristics. In anticipation of this demand, we have focused on developing our capabilities in some advanced packaging solutions, such as flip-chip BGA. Flip-chip BGA technology replaces wire bonding with wafer bumping for interconnections within the package. Wafer bumping involves the placing of tiny solder balls, instead of wires, on top of dies for connection to substrates. As compared with more traditional packages, which allow input/output connection only on the boundaries of the dies, flip-chip packages significantly enhance the input/output flow by allowing input/output connection over the entire surface of the dies.

The following table sets forth our principal substrate-based packages.

| Package Types | Number of Leads | Description | End-Use Applications |
|---------------------------------------|-----------------|---|---|
| Plastic BGA | 5-1520 | Designed for semiconductors which require the enhanced performance provided by plastic BGA, including personal computer chipsets, graphic controllers and microprocessors, application-specific integrated circuits, digital signal processors and memory devices. | Wireless products, cellular phones, global positioning systems, notebook computers, disk drives and video cameras. |
| Cavity Down BGA | 256-1140 | Designed for memory devices such as flash memory devices, SRAM, DRAM and FSRAM, microprocessors/controllers and high-value, application-specific integrated circuits requiring a low profile, light and small package. | Cellular and other telecommunications products, wireless and consumer systems, personal digital assistants, or PDAs, disk drives, notebook computers and memory boards. |
| Stacked-Die BGA | 44-591 | Combination of multiple dies in a single package enables package to have multiple functions within a small surface area. | Cellular phones, local area networks, graphic and processors, digital cameras and pagers. |
| Flip-Chip BGA | 16-2401 | Using advanced interconnect technology, the flip-chip BGA package allows higher density of input/output connection over the entire surface of the dies. Designed for high-performance semiconductors that require high density of interconnects in a small package. | High-performance networking, graphics and processor applications. |
| Land Grid Array (LGA) | 10-72 | Leadless package which is essentially a BGA package without the solder balls. Based on laminate substrate, land grid array packages allow flexible routing and are capable of multichip module functions. | High frequency integrated circuits such as wireless communications products, computers servers and personal computer peripherals. |
| Flip-Chip Chip Scale Package (FC-CSP) | 16-200 | A lightweight package with a small, thin profile that provides better protection for chips and better solder joint reliability than | RFICs and memory ICs such as digital cameras, DVDs, devices that utilize WiMAX technology, cellular |

| | | | |
|---------------------------------------|------|--|---|
| | | other comparable package types. | phones, GPS devices and personal computer peripherals. |
| Wafer Level Chip Scale Package (aCSP) | 6-88 | A wafer level CSP package that can be directly attached to the circuit board. Provides shortest electrical path from the die pad to the circuit board, thereby enhancing electrical performance. | Applications for portable devices, cellular phones, PDAs, watches, MP3 players, cameras and camcorders. |

Table of Contents

Module Assembly. We also offer module assembly services, which combine one or more packaged semiconductors with other components in an integrated module to enable increased functionality, typically using automated surface mount technology, or SMT, machines and other machinery and equipment for system-level assembly. End-use applications for modules include cellular phones, PDAs, wireless LAN applications, Bluetooth applications, camera modules, automotive applications and toys. Beginning in 2003, a substantial portion of our module assembly services was provided at ASE Test's facilities in Malaysia to a customer for the assembly of camera modules used in handsets. In 2005, this customer moved its camera module assembly in-house and ASE Test disposed of its camera module assembly operations in Malaysia in October 2005. We currently provide module assembly services primarily at our facilities in Korea for radio frequency and power amplifier modules used in wireless communications and automotive applications.

Interconnect Materials. Interconnect materials connect the input/output on the semiconductor dies to the printed circuit board. Interconnect materials include leadframe, which is a miniature sheet of metal, generally made of copper and silver alloys, on which the pattern of input/output leads has been cut, and substrate, which is a multi-layer miniature printed circuit board. Interconnect materials are an important element of the electrical characteristics and overall performance of semiconductors. We produce substrates for use in our packaging operations. We also produced leadframes in the past, but we discontinued production in the fourth quarter of 2005.

We expect substrates will become an increasingly important value-added component of the semiconductor packaging business. The demand for higher performance semiconductors in smaller packages will continue to spur the development of advanced substrates that can support the advancement in circuit design and fabrication. As a result, we believe that the market for substrates will grow and the cost of substrates as a percentage of the total packaging process will increase, especially for advanced packages such as flip-chip BGA packages. In the past, substrates we designed for our customers were produced by independent substrate manufacturers. Since 1997, we have been designing and producing a portion of our interconnect materials in-house. In 2007, our interconnect materials operations supplied approximately 52.2% of our consolidated substrate requirements by value.

The following table sets forth, for the periods indicated, the percentage of our packaging revenues accounted for by each principal type of packaging products or services.

| | Year Ended December 31, | | |
|---|------------------------------------|--------|--------|
| | 2005 | 2006 | 2007 |
| | (percentage of packaging revenues) | | |
| Advanced substrate and leadframe-based packages(1)(2) | 79.3% | 82.8% | 83.8% |
| Traditional leadframe-based packages(3) | 6.6 | 5.2 | 4.3 |
| Module assembly | 10.0 | 7.1 | 6.2 |
| Other | 4.1 | 4.9 | 5.7 |
| Total | 100.0% | 100.0% | 100.0% |

(1) In October 2005, ASE Test disposed of its camera module assembly operations in Malaysia. Such operations were formerly classified as part of its packaging operations. Information in this annual report from our consolidated statements of operations for the years ended December 31, 2003, 2004 and 2005 has been adjusted to reflect the reclassification of ASE Test's camera module assembly operations as discontinued operations.

(2) Includes leadframe-based packages such as QFP/TQFP, QFN/MCC and BCC and substrate-based packages such as various BGA package types (including flip-chip and others) and LGA.

(3) Includes leadframe-based packages such as SOP/TSOP, SOJ, PLCC and PDIP.

Table of Contents

Testing Services

We provide a complete range of semiconductor testing services, including front-end engineering testing, wafer probing, final testing of logic/mixed-signal and memory semiconductors and other test-related services.

The testing of semiconductors requires technical expertise and knowledge of the specific applications and functions of the semiconductors tested as well as the testing equipment utilized. We believe that our testing services employ technology and expertise which are among the most advanced in the semiconductor industry. In addition to maintaining different types of testing equipment, which enables us to test a variety of semiconductor functions, we work closely with our customers to design effective testing and conversion programs on multiple equipment platforms for particular semiconductors.

In recent years, complex, high-performance logic/mixed-signal semiconductors have accounted for an increasing portion of our testing revenues. As the testing of complex, high-performance semiconductors requires a large number of functions to be tested using more advanced testing equipment, these products generate higher revenues per unit of testing time, as measured in central processing unit seconds.

Front-End Engineering Testing. We provide front-end engineering testing services, including customized software development, electrical design validation, and reliability and failure analysis.

- **Customized Software Development.** Test engineers develop customized software to test the semiconductor using advanced testing equipment. Customized software, developed on specific testing platforms, is required to test the conformity of each particular semiconductor type to its unique functionality and specification.
- **Electrical Design Validation.** A prototype of the designed semiconductor is subjected to electrical tests using advanced test equipment and customized software. These tests assess whether the prototype semiconductor complies with a variety of different operating specifications, including functionality, frequency, voltage, current, timing and temperature range.
- **Reliability Analysis.** Reliability analysis is designed to assess the long-term reliability of the semiconductor and its suitability of use for intended applications. Reliability testing can include “burn-in” services, which electrically stress a device, usually at high temperature and voltage, for a period of time long enough to cause the failure of marginal devices.
- **Failure Analysis.** In the event that the prototype semiconductor does not function to specifications during either the electrical design validation or reliability testing processes, it is typically subjected to failure analysis to determine the cause of the failure to perform as anticipated. As part of this analysis, the prototype semiconductor may be subjected to a variety of analyses, including electron beam probing and electrical testing.

Wafer Probing. Wafer probing is the step immediately before the packaging of semiconductors and involves visual inspection and electrical testing of the processed wafer for defects to ensure that it meets our customers’ specifications. Wafer probing services require expertise and testing equipment similar to that used in final testing, and most of our testers can also be used for wafer probing.

Logic/Mixed-Signal/RF Final Testing. We conduct final tests of a wide variety of logic/mixed-signal/RF semiconductors, with the number of leads ranging from the single digits to over one thousand and operating frequencies of over 2.5 Gbps for digital semiconductors and 6 GHz for radio frequency semiconductors, which are at the high end of the range for the industry. The products we test include semiconductors used for networking and

wireless communications, graphics and disk controllers for home entertainment and personal computer applications, as well as a variety of application-specific integrated circuits for various specialized applications.

Table of Contents

Memory Final Testing. We provide final testing services for a variety of memory products, such as SRAM, DRAM, single-bit erasable programmable read-only memory semiconductors and flash memory semiconductors.

Other Test-Related Services. We provide a broad range of additional test-related services, including:

- **Burn-in Testing.** Burn-in testing is the process of electrically stressing a device, usually at high temperature and voltage, for a period of time to simulate the continuous use of the device to determine whether this use would cause the failure of marginal devices;
- **Dry Pack.** Process which involves heating semiconductors in order to remove moisture before packaging and shipping to customers;
- **Tape and Reel.** Process which involves transferring semiconductors from a tray or tube into a tape-like carrier for shipment to customers; and
- **Electric Interface Board and Mechanical Test Tool Design.** Process of designing individualized testing apparatuses for unique semiconductor devices and packages.

Drop Shipment Services. We offer drop shipment services for shipment of semiconductors directly to end users designated by our customers. Drop shipment services are provided mostly in conjunction with logic/mixed-signal testing. We provide drop shipment services to a significant percentage of our testing customers. A substantial portion of our customers at each of our facilities have qualified these facilities for drop shipment services. Since drop shipment eliminates the additional step of inspection by the customer before shipment to the end user, quality of service is a key consideration. We believe that our ability to successfully execute our full range of services, including drop shipment services, is an important factor in maintaining existing customers as well as attracting new customers.

The following table sets forth, for the periods indicated, the percentage of our testing revenues accounted for by each type of testing service.

| | Year Ended December 31, | | |
|-------------------------------|----------------------------------|---------------|---------------|
| | 2005 | 2006 | 2007 |
| | (percentage of testing revenues) | | |
| Testing Services: | | | |
| Front-end engineering testing | 3.7% | 4.7% | 3.6% |
| Wafer probing | 16.6 | 18.7 | 20.1 |
| Final testing | 79.7 | 76.6 | 76.3 |
| Total | 100.0% | 100.0% | 100.0% |

Sales and Marketing

Sales and Marketing Offices

We maintain sales and marketing offices in Taiwan, the United States, Austria, Belgium, France, Germany, Singapore, Korea, Malaysia and Japan. Our sales and marketing offices in Taiwan, which are located in Taoyuan and Kaohsiung, are staffed with both our and ASE Test Taiwan's employees. We conduct marketing research through our customer service personnel and through our relationships with our customers and suppliers to keep abreast of market trends and developments. We also provide advice in the area of production process technology to our major customers planning the introduction of new products. In placing orders with us, our customers specify which of our facilities these orders will go to. Our customers conduct separate qualification and correlation processes for each of our facilities that they use. See “—Qualification and Correlation by Customers.”

Table of Contents

Customers

Our global base of over 200 customers includes leading semiconductor companies across a wide range of end-use applications, such as:

- Altera Corporation
- ATI Technologies, Inc.
- Broadcom Corporation
- Cambridge Silicon Radio Limited
- Conexant Systems, Inc.
- Freescale Semiconductor, Inc.
- Kawasaki Microelectronics, Inc.
- Marvell Technology Group Ltd.
- Media Tek Inc.
- Microsoft Corporation
- NEC Electronics Corporation
- NVIDIA Corporation
- NXP Semiconductors
- Powerchip Semiconductor Corp.
- Qualcomm Incorporated
- RF Micro Devices, Inc.
- STMicroelectronics N.V.
- VIA Technologies, Inc.
- Zoran Corporation

Our five largest customers together accounted for approximately 30.6%, 26.0% and 24.8% of our net revenues in 2005, 2006 and 2007, respectively. No customer accounted for more than 10% of our net revenues in 2005, 2006 and 2007.

We package and test for our customers a wide range of products with end-use applications in the communications, computers, consumer electronics, industrial and automotive sectors. The following table sets forth a breakdown of the percentage of our net revenues, for the periods indicated, by the principal end-use applications of the products which we packaged and tested.

| | Year Ended December 31, | | |
|--|-------------------------|--------|--------|
| | 2005 | 2006 | 2007 |
| Communications | 37.0% | 37.2% | 44.5% |
| Computers | 29.3 | 24.7 | 22.8 |
| Consumer electronics/industrial/automotive | 30.9 | 37.3 | 32.1 |
| Other | 2.8 | 0.8 | 0.6 |
| Total | 100.0% | 100.0% | 100.0% |

Many of our customers are leaders in their respective end-use markets. For example, we provide Freescale Semiconductor, Inc., an industry leader in automotive and wireless communications semiconductor products, with a substantial portion of its outsourced packaging and testing requirements. The following table sets forth some of our largest customers, in alphabetical order, categorized by the principal end-use applications of the products which we package and test for them.

| Communications | Computers | Consumer Electronics/Industrial/Automotive |
|---------------------------------|-------------------------------|--|
| Broadcom Corporation | ATI Technologies, Inc. | Freescale Semiconductor, Inc. |
| Cambridge Silicon Radio Limited | NVIDIA Corporation | Kawasaki Microelectronics Inc. |
| Freescale Semiconductor, Inc. | Powerchip Semiconductor Corp. | Microsoft Corporation |
| Media Tek Inc. | VIA Technologies, Inc. | NEC Electronics Corporation |
| NXP Semiconductors | | Zoran Corporation |
| Qualcomm Incorporated | | |

RF Micro Devices, Inc.

34

Table of Contents

We categorize our packaging and testing revenues geographically based on the country in which the customer is headquartered. The following table sets forth, for the periods indicated, the percentage breakdown by geographic regions of our packaging and testing revenues.

| | Year Ended December 31, | | |
|---------|-------------------------|--------|--------|
| | 2005 | 2006 | 2007 |
| America | 51.5% | 53.1% | 49.8% |
| Taiwan | 20.0 | 18.7 | 21.2 |
| Asia | 16.2 | 15.7 | 16.6 |
| Europe | 12.3 | 12.5 | 12.4 |
| Other | * | * | * |
| Total | 100.0% | 100.0% | 100.0% |

* Indicates percentage is less than 0.1% of net revenues.

The majority of our testing revenues is accounted for by the testing of semiconductors that were also packaged at our packaging facilities. The balance represented testing revenues from customers who delivered packaged semiconductors directly to our facilities for testing services alone. The majority of our packaging revenues is accounted for by the packaging of semiconductors which were subsequently tested at our facilities. We expect that more customers of our packaging facilities will begin to contract for our packaging and testing services on a turnkey basis.

Qualification and Correlation by Customers

Customers generally require that our facilities undergo a stringent qualification process during which the customer evaluates our operations and production processes, including engineering, delivery control and testing capabilities. The qualification process typically takes up to eight weeks, but can take longer depending on the requirements of the customer. In the case of our testing operations, after we have been qualified by a customer and before the customer delivers semiconductors to us for testing in volume, a process known as correlation is undertaken. During the correlation process, the customer provides us with sample semiconductors to be tested and either provides us with the test program or requests that we develop a conversion program. In some cases, the customer also provides us with a data log of results of any testing of the semiconductors which the customer may have conducted previously. The correlation process typically takes up to two weeks, but can take longer depending on the requirements of the customer. We believe our ability to provide turnkey services reduces the amount of time spent by our customers in the qualification and correlation process. As a result, customers utilizing our turnkey services are able to achieve shorter production cycles.

Pricing

We price our packaging services primarily on a cost-plus basis with reference to prevailing market prices. We price our testing services primarily on the basis of the amount of time, measured in central processing unit seconds, taken by the automated testing equipment to execute the test programs specific to the products being tested, as well as the cost of the equipment, with reference to prevailing market prices. Prices for our packaging and testing services are confirmed at the time firm orders are received from customers, which is typically four to eight weeks before delivery.

Raw Materials and Suppliers

Packaging

The principal raw materials used in our packaging processes are interconnect materials such as leadframes and substrates, gold wire and molding compound. Interconnect materials, such as leadframes, substrates, gold wire and molding compound represented approximately 13.2%, 35.9%, 32.8% and 6.3%, respectively, of our total cost of packaging materials in 2007.

35

Table of Contents

The silicon die, which is the functional unit of the semiconductor to be packaged, is supplied in the form of silicon wafers. Each silicon wafer contains a number of identical dies. We receive the wafers from the customers or the foundries on a consignment basis. Consequently, we generally do not incur inventory costs relating to the silicon wafers used in our packaging process.

We do not maintain large inventories of leadframes, substrates, gold wire or molding compound, but generally maintain sufficient stock of each principal raw material for approximately one month's production based on blanket orders and rolling forecasts of near-term requirements received from customers. In addition, several of our principal suppliers dedicate portions of their inventories, typically in amounts equal to the average monthly amounts supplied to us, as reserves to meet our production requirements. However, shortages in the supply of materials experienced by the semiconductor industry have in the past resulted in occasional price adjustments and delivery delays. For example, in the first half of 2000, the industry experienced a shortage in the supply of advanced substrates used in BGA packages, which, at the time, were only available from a limited number of suppliers located primarily in Japan. Recent increases in gold prices have also affected the price at which we have been able to purchase gold wire. We cannot guarantee that we will not experience shortages in the near future or that we will be able to obtain adequate supplies of raw materials in a timely manner and at a reasonable price. In the event of a shortage, we generally inform our customers and work together to accommodate changes in delivery schedules.

We produce substrates for use in our packaging operations. We produced leadframes in the past, but we discontinued production in the fourth quarter of 2005. In 2007, our interconnect materials operations supplied approximately 52.2% of our consolidated substrate requirements by value. See “—Principal Products and Services—Packaging Services—Interconnect Materials.”

As a result of the “Directive 2002/95/EC on the restriction of the use of certain hazardous substances in electrical and electronic equipment”, or RoHS, which became effective on July 1, 2006, we have adjusted our purchases of raw materials and our production processes in order to use raw materials that comply with this legislation for part of our production. This new legislation restricts the use in the European Union, or EU, of certain substances the EU deems harmful to consumers, which includes certain grades of molding compounds, solder and other raw materials that are used in our products. Manufacturers of electrical and electronic equipment must comply with this legislation in order to sell their products in an EU member state. As a result of this legislation, our customers have increasingly requested that RoHS-compliant materials be used in our packaging processes.

Testing

Apart from packaged semiconductors, no other raw materials are needed for the functional and burn-in testing of semiconductors. For the majority of our testing equipment, we often base our purchases on prior discussions with our customers about their forecast requirements. The balance consists of testing equipment on consignment from customers and which are dedicated exclusively to the testing of these customers' specific products.

Equipment

Packaging

The most important equipment used in the semiconductor packaging process is the wire bonder. Wire bonders connect the input/output terminals on the silicon die using extremely fine gold wire to leads on leadframes or substrates. Typically, a wire bonder may be used, with minor modifications, for the packaging of different products. We purchase our wire bonders principally from Kulicke & Soffa Industries Inc. and Oerlikon Assembly Equipment Ltd. As of April 30, 2008, we operated an aggregate of 8,268 wire bonders, of which 7,518 were fine-pitch wire bonders. As of the same date, 43 of the wire bonders operated by us were consigned by customers. For the packaging of certain types of

substrate-based packages, such as flip-chip BGA, die bonders are used in place of wire bonders. We purchase our die bonders principally from Hitachi High Technologies Corporation and Oerlikon Assembly Equipment Ltd. The number of bonders at a given facility is commonly used as a measure of the packaging capacity of the facility. In addition to bonders, we maintain a variety of other types of packaging equipment, such as wafer grind, wafer mount, wafer saw, automated molding machines, laser markers, solder plate, pad printers, dejunkers, trimmers, formers, substrate saws and scanners. We purchase our molding machines principally from Towa Corporation and Fico B.V.

Table of Contents

Testing

Testing equipment is the most capital intensive component of the testing process. We generally seek to purchase testers from different suppliers with similar functionality and the ability to test a variety of different semiconductors. We purchase testers from major international manufacturers, including Verigy Ltd., Teradyne, Inc., Credence Systems Corporation, LTX Corporation, Seiko Epson and Tokyo Electron Limited. Upon acquisition of new testers, we install, configure, calibrate, perform burn-in diagnostic tests on and establish parameters for the testers based on the anticipated requirements of existing and potential customers and considerations relating to market trends. As of April 30, 2008, we operated an aggregate of 1,556 testers, of which 422 were consigned by customers and 58 were leased under operating leases. In addition to testers, we maintain a variety of other types of testing equipment, such as automated handlers and probers (special handlers for wafer probing), scanners, reformers and computer workstations for use in software development. Each tester may be attached to a handler or prober. Handlers attach to testers and transport individual packaged semiconductor to the tester interface. Probers similarly attach to the tester and align each individual die on a wafer with the interface to the tester.

Test programs, which are the software that drive the testing of specific semiconductors, are written for a specific testing platform. We often perform test program conversions that enable us to test semiconductors on multiple test platforms. This portability between testers enables us to allocate semiconductors tested across our available test capabilities and thereby improve capacity utilization rates. In cases where a customer requires the testing of a semiconductor product that is not yet fully developed, the customer may provide personal computer workstations to us to test specific functions. In cases where a customer has specified testing equipment that was not widely applicable to other products which we test, we have required the customer to furnish the equipment on a consignment basis.

Intellectual Property

As of April 30, 2008, we held 1,321 Taiwan patents, 38 U.S. patents and 27 PRC patents related to various semiconductor packaging technologies. In addition, we registered “ASE” as a trademark and as a servicemark in Taiwan.

We have also entered into various non-exclusive technology license agreements with other companies involved in the semiconductor manufacturing process, including Freescale Semiconductor Inc., Tessera Inc., Fujitsu Limited, Flip Chip International, L.L.C., Mitsui High-Tec, Inc. and Infineon Technologies AG. We paid royalties under our license agreements in the amount of NT\$179.1 million, NT\$282.3 million and NT\$246.8 million (US\$7.6 million) in 2005, 2006 and 2007, respectively. The technology we license from these companies includes solder bumping, redistribution, ultra CSP assembly, advanced QFN assembly, wafer level packaging and other technologies used in the production of package types, such as BCC, flip-chip BGA, film BGA and QFN. The license agreement with Tessera Inc. will not expire until the expiration of the Tessera Inc. patents licensed by the agreement. For information regarding our intellectual property dispute with Tessera, see “Item 8. Financial Information—Legal Proceedings.” Our license agreements with Freescale Semiconductor Inc. will expire on December 31, 2010. Our license agreements with Flip Chip International, L.L.C. will not expire until the expiration of the Flip Chip International, L.L.C. patents licensed by the agreement. Our license agreement with Infineon Technologies AG will expire on November 5, 2017, and our license agreement with Mitsui High-Tec, Inc. will expire on June 24, 2012. We negotiate the renewal of our license agreement with Fujitsu Limited annually.

Our success depends in part on our ability to obtain, maintain and protect our patents, licenses and other intellectual property rights, including rights under our license agreement with Freescale Semiconductor, Inc.

Table of Contents

Quality Control

We believe that our advanced process technology and reputation for high quality and reliable services have been important factors in attracting and retaining leading international semiconductor companies as customers for our packaging and testing services. We have maintained an average packaging yield rate of 99.8% or greater in each of the last three years. We maintain a quality control staff at each of our facilities. Our quality control staff typically includes engineers, technicians and other employees who monitor packaging and testing processes in order to ensure high quality. Our quality assurance systems impose strict process controls, statistical in-line monitors, supplier control, data review and management, quality controls and corrective action systems. Our quality control employees operate quality control stations along production lines, monitor clean room environments and follow up on quality through outgoing product inspection and interaction with customer service staff. We have established quality control systems which are designed to ensure high quality service to customers, high product and testing reliability and high production yields at our facilities. We also have established an environmental management system in order to ensure that we can comply with the environmental standards of our customers and the countries within which they operate. See “—Raw Materials and Suppliers—Packaging.” In addition, our packaging and testing facilities have been qualified by all of our major customers after satisfying stringent quality standards prescribed by these customers.

Our packaging and testing operations are undertaken in clean rooms where air purity, temperature and humidity are controlled. To ensure stability and integrity of our operations, we maintain clean rooms at our facilities that meet U.S. Federal Standard 209E class 1,000, 10,000 and 100,000 standards.

Our packaging, testing and interconnect materials facilities in Taiwan, Malaysia, Japan, the PRC, Singapore and Korea have been certified as meeting ISO/TS16949:2002 standards. Such standards were originally created by the International Automotive Task Force in conjunction with the International Standards Organization, or ISO. These standards provide for continuous improvement with an emphasis on the prevention of defects and reduction of variation and waste in the supply chain. The ISO/TS16949:2002 certification is required by some semiconductor manufacturers as a threshold indicator of company’s quality control standards.

Our packaging, testing and interconnect materials facilities in Taiwan, Japan, Korea, Malaysia, the PRC, California and Singapore have been certified as meeting the ISO 9001 quality standards set by the ISO. Our packing, testing and interconnect materials facilities in Taiwan, Japan, Korea, Malaysia, the PRC, California and Singapore have also been certified as meeting the ISO 14001 quality standards. In addition, our packaging facilities in Kaohsiung, Taiwan have been certified as meeting the ISO 17025:2005 quality standards set by the ISO. ISO certifications are required by many countries in connection with sales of industrial products.

Our packaging, testing and interconnect materials facilities in Taiwan, Korea and the PRC have also been certified to be in compliance with OHSAS 18001:1999, a set of standards designed upon collaboration with occupational health and safety experts and now offered by many certification organizations as an indication of compliance with certain standards for occupational health and safety.

ISE Labs’ testing facilities in Fremont, California have been approved by the U.S. military’s Defense Supply Center, Columbus, Sourcing and Qualifications Unit as a laboratory possessing the requisite level of performance, quality and reliability required of suppliers for the U.S. Department of Defense.

Our packaging, testing and interconnect materials facilities in Taiwan, Malaysia and Korea have been certified as a “Sony Green Partner”, which indicates our compliance with the “Sony Green Package” standard requirements.

Our packaging, testing and interconnect material facilities in Taiwan, the PRC and Malaysia have been certified to be in compliance with IECQ HSPM QC080000, a certification designed to manage, reduce and eliminate hazardous substances.

In addition, we have received various vendor awards from our customers for the quality of our products and services.

Table of Contents

Competition

We compete in the highly competitive independent semiconductor packaging and testing markets. We face competition from a number of sources, including other independent semiconductor packaging and testing companies. More importantly, we compete for the business of integrated device manufacturers with in-house packaging and testing capabilities and fabless semiconductor design companies with their own in-house testing capabilities. Some of these integrated device manufacturers have commenced, or may commence, in-house packaging and testing operations in Asia. Substantially all of the independent packaging and testing companies that compete with us have established operations in Taiwan.

Integrated device manufacturers that use our services continuously evaluate our performance against their own in-house packaging and testing capabilities. These integrated device manufacturers may have access to more advanced technologies and greater financial and other resources than we do. We believe, however, that we can offer greater efficiency at lower cost while maintaining equivalent or higher quality for several reasons. First, as we benefit from specialization and economies of scale by providing services to a large base of customers across a wide range of products, we are better able to reduce costs and shorten production cycles through high capacity utilization and process expertise. Second, as a result of our customer base and product offerings, our equipment generally has a longer useful life. Third, as a result of the continuing reduction of investments in in-house packaging and testing capacity and technology at integrated device manufacturers, we are better positioned to meet their advanced packaging and testing requirements on a large scale.

Environmental Matters

Our packaging and interconnect materials operations generate environmental wastes, including gaseous chemical, liquid and solid industrial wastes. We have installed various types of anti-pollution equipment for the treatment of liquid and gaseous chemical waste generated at all of our semiconductor packaging facilities. We believe that we have adopted adequate anti-pollution measures for the effective maintenance of environmental protection standards that are consistent with the industry practice in the countries in which our facilities are located. In addition, we believe we are in compliance in all material respects with present environmental laws and regulations applicable to our operations and facilities. For information regarding our compliance with a recent EU Directive affecting us, see “—Raw Materials and Suppliers—Packaging.”

Insurance

We have insurance policies covering property damage and damage to our production facilities, buildings and machinery. In addition, we have insurance policies covering our public and product liabilities. Significant damage to any of our production facilities would have a material adverse effect on our results of operations.

We are not insured against the loss of key personnel.

ORGANIZATIONAL STRUCTURE

The following chart illustrates our corporate structure and our effective equity interest in each of our principal operating subsidiaries and affiliates as of May 30, 2008. The following chart does not include wholly-owned intermediate holding companies other than ASE Test.

Table of Contents

Our Consolidated Subsidiaries

ASE Test

We believe ASE Test is one of the largest independent testing companies in the world, providing a complete range of semiconductor testing services to leading international semiconductor companies. ASE Test also provides semiconductor packaging services. ASE Test has testing operations in Taiwan, the United States and Singapore, and also maintains testing and packaging operations in Malaysia.

ASE Test was incorporated in 1995 and its ordinary shares were quoted for trading on the Nasdaq Global Market under the symbol “ASTSF” in June 1996. ASE Test’s Taiwan depositary shares representing its ordinary shares were listed for trading on the Taiwan Stock Exchange under the symbol “9101” in January 1998. On May 30, 2008, we acquired, by way of a scheme of arrangement under Singapore law, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own, making ASE Test our wholly-owned subsidiary. On June 12, 2008, ASE Test’s ordinary shares were delisted from the Nasdaq Global Market. ASE Test’s shares will be deregistered under the Exchange Act effective September 10, 2008 and its reporting obligations thereunder are currently suspended. The delisting of ASE Test’s depositary shares from the Taiwan Stock Exchange is currently expected to occur in mid-July, pending ROC regulatory approval. For more information on this transaction, see “—History and Development of the Company—ASE Test Share Acquisition and Privatization.”

ASE Test is a holding company incorporated in Singapore whose significant assets are its ownership interests in the following operating companies as of May 30, 2008:

- ASE Test Taiwan. ASE Test Taiwan, which was acquired in 1990, is ASE Test’s 99.99%-owned subsidiary. It is incorporated in Taiwan and is engaged in the testing of integrated circuits;
- ASE Test Malaysia. ASE Test Malaysia, which was established in 1991, is ASE Test’s wholly-owned subsidiary. It is incorporated in Malaysia and is engaged in the packaging and testing of integrated circuits. ASE Test Malaysia disposed of its camera module assembly operations in October 2005;
- ISE Labs. ISE Labs is ASE Test’s wholly-owned subsidiary. It is a semiconductor company specializing in front-end engineering testing that is incorporated in the United States and has its principal facilities located in Fremont and Santa Clara, California. We acquired 70.0% of the outstanding shares of ISE Labs in 1999, and increased our holding to 100.0% through purchases made in 2000 and 2002; and
- ASE Korea. ASE Test owns 30.0% of ASE Korea. We own the remaining 70.0%. It is incorporated in Korea and is engaged in the packaging and testing of semiconductors. See “—ASE Chung Li and ASE Korea.”

Table of Contents

In 2005, ASE Test recorded net revenues of US\$420.9 million, operating income of US\$14.0 million and net loss of US\$35.5 million. In 2006, ASE Test recorded net revenues of US\$517.7 million, operating income of US\$132.3 million and net income of US\$150.8 million. In 2007, ASE Test recorded net revenues of US\$475.1 million, operating income of US\$99.9 million and net income of US\$88.5 million.

ASE Electronics

ASE Material was established in 1997 as an ROC company for the design and production of interconnect materials, such as leadframes and substrates, used in the packaging of semiconductors. We initially held a majority stake in ASE Material, but acquired the remaining equity by means of a merger of ASE Material with and into us in August 2004. In August 2006, we spun off the operations originally conducted through ASE Material into our wholly-owned subsidiary ASE Electronics. ASE Electronics currently supplies our packaging operations with a substantial portion of our substrate requirements. The facilities of ASE Electronics are primarily located in the Nantze Export Processing Zone near our packaging and testing facilities in Kaohsiung, Taiwan.

ASE Chung Li and ASE Korea

In July 1999, we purchased Motorola's Semiconductor Products Sector operations in Chung Li, Taiwan and Paju, South Korea for the packaging and testing of semiconductors with principally communications, consumer and automotive applications, thereby forming ASE Chung Li and ASE Korea. We acquired a 70.0% interest in each of the two businesses, and ASE Test acquired the remaining 30.0% interest. In August 2004, we acquired all of the outstanding shares of ASE Chung Li that we did not already own by means of a merger of ASE Chung Li into us.

ASE Japan

ASE Japan, which we acquired from NEC Electronics Corporation in May 2004, is our wholly-owned subsidiary. It is incorporated in Japan and is engaged in the packaging and testing of semiconductors.

ASE Shanghai

ASE Shanghai was established in 2001 as a wholly-owned subsidiary of ASE Inc. and began operations in June 2004. ASE Shanghai primarily manufactures and supplies interconnect materials for our packaging operations.

Power ASE Technology, Inc.

In July 2006, we established Power ASE, a joint venture with Powerchip Semiconductor Corp., or Powerchip, focusing on the packaging and testing of memory semiconductors. Power ASE began operations in December 2006. Pursuant to the joint venture agreement, we invested US\$30.0 million for 60.0% of the equity interest in Power ASE and Powerchip invested US\$20.0 million for the remaining 40.0%. We currently own 56.3% of Power ASE and Powerchip owns the remaining 43.7%.

ASE Assembly and Test (Shanghai) Limited

We acquired 100.0% of GAP, now known as ARESH AT, in January 2007. ARESH AT is a PRC company based in Shanghai, China that provides wire bond packaging and testing services for a wide range of semiconductors.

ASEN

In September 2007, we acquired 60.0% of ASEN from NXP Semiconductors. ASEN is based in Suzhou, China and is engaged in semiconductor packaging and testing.

ASE Weihai Inc.

In May 2008, we acquired 100.0% of the shares of ASE Weihai Inc. from Aimhigh Global Corp. and TCC Steel. ASE Weihai Inc. is based in Shandong, China and is engaged in semiconductor packaging and testing.

Table of Contents

Our Unconsolidated Affiliates

As of May 30, 2008, we held approximately 18.7% of the outstanding shares of Universal Scientific and 26.2% of the outstanding shares of Hung Ching.

Universal Scientific

Universal Scientific, which is an ROC company, manufactures electronics products in varying degrees of system integration principally on a contract basis for original equipment manufacturers, including:

- electronic components such as thick film mixed-signal devices, thick film resistors, high frequency devices and automotive and power electronic devices;
- board and sub-system assemblies such as customized surface mount technology board assemblies, mother boards for personal computers, wireless local area network cards and fax control boards; and
- system assemblies such as portable computers, desktop personal computers, network computers and servers.

Universal Scientific's principal manufacturing facilities are located in Nantou, Taiwan. The shares of Universal Scientific are listed on the Taiwan Stock Exchange under the symbol "2350."

We purchased 22.6% of the outstanding shares of Universal Scientific in 1999, principally through open market purchases on the Taiwan Stock Exchange. We subsequently increased our holding to 23.3% following open market purchases of additional shares in 2000. As of May 30, 2008, we held 18.7% of Universal Scientific's outstanding equity shares. We are the largest shareholder in Universal Scientific and four out of the nine directors on its board of directors, including the chairman, are our representatives. As a result, we exercise significant influence over Universal Scientific and therefore account for this investment by the equity method.

In 2005, Universal Scientific recorded net revenues of NT\$52,253.6 million, operating income of NT\$994.6 million and net income of NT\$682.1 million. In 2006, Universal Scientific recorded net revenues of NT\$53,211.5 million, operating income of NT\$1,830.4 million and net income of NT\$1,377.0 million. In 2007, Universal Scientific recorded net revenues of NT\$65,124.1 million (US\$2,008.1 million), operating income of NT\$2,288.8 million (US\$70.6 million) and net income of NT\$1,868.4 million (US\$57.6 million). As of April 30, 2008, Universal Scientific had a market capitalization of NT\$18,563.8 million (US\$572.4 million).

Hung Ching

Hung Ching is an ROC company engaged in the development and management of commercial, residential and industrial real estate properties in Taiwan. The shares of Hung Ching are listed on the Taiwan Stock Exchange under the symbol "2527." Hung Ching was founded in 1986 by Chang Yao Hung-ying. Chang Yao Hung-ying is the mother of both Jason C.S. Chang, our Chairman and Chief Executive Officer, and Richard H.P. Chang, our Vice Chairman and President, and was a director of ASE Inc. from 1984 to June 2003. Jason C.S. Chang, Richard H.P. Chang, Chang Yao Hung-ying and other members of the Chang family are controlling shareholders of Hung Ching. As of May 30, 2008, we held 26.2% of Hung Ching's outstanding equity shares. We are the largest shareholder of Hung Ching and two out of the seven directors on its board of directors, including the chairman, are our representatives.

In 2005, Hung Ching recorded net revenues of NT\$1,737.6 million, operating income of NT\$119.6 million and net income of NT\$91.6 million. In 2006, Hung Ching recorded net revenues of NT\$1,663.5 million, operating income of NT\$245.6 million and net income of NT\$204.6 million. In 2007, Hung Ching recorded net revenues of NT\$799.1

million (US\$24.6 million), operating income of NT\$46.9 million (US\$1.4 million) and net income of NT\$62.5 million (US\$1.9 million). As of April 30, 2008, Hung Ching had a market capitalization of NT\$5,376.5 million (US\$165.8 million).

Table of Contents

PROPERTY, PLANTS AND EQUIPMENT

We operate a number of packaging and testing facilities in Asia and the United States. Our facilities provide varying types or levels of services with respect to different end-product focus, customers, technologies and geographic locations. With our diverse facilities we are able to tailor our packaging and testing solutions closely to our customers' needs. The following table sets forth the location, commencement of operation, primary use, approximate floor space and ownership of our facilities as of April 30, 2008, except with respect to ASE Weihai Inc., which we acquired in May 2008.

| Facility | Location | Commencement of Operation | Primary Use | Approximate Floor Space (in sq. ft.) | Owned or Leased |
|-----------------|-------------------|---------------------------|---|--------------------------------------|---|
| ASE Inc. | Kaohsiung, Taiwan | March 1984 | Our primary packaging facility, which offers complete semiconductor manufacturing solutions in conjunction with ASE Test Taiwan and foundries located in Taiwan. Focuses primarily on advanced packaging services, including flip-chip, wafer bumping and fine-pitch wire bonding. | 2,910,000 | Land: leased Buildings: owned and leased |
| | Chung Li, Taiwan | Acquired in August 1999 | An integrated packaging and testing facility that specializes in semiconductors for communications and consumer applications. | 1,526,000 | Land and Buildings: owned |
| ASE Test Taiwan | Kaohsiung, Taiwan | December 1987 | Our primary testing facilities, which offer complete semiconductor manufacturing solutions in conjunction with ASE Inc.'s facility in Kaohsiung and foundries located in Taiwan. Focuses primarily on advanced logic/mixed-signal testing for integrated device manufacturers, fabless design companies and system companies. | 981,000 | Land: leased Buildings: owned and leased |
| | Chung Li, Taiwan | October 2001 | Our primary wafer probing testing facilities. | 16,000 | Land and building: leased |
| | | February 1991 | | 828,000 | Land: leased |

| | | | | | |
|-------------------|---|---------------|---|-----------|--|
| ASE Test Malaysia | Penang, Malaysia | | An integrated packaging and testing facility that focuses primarily on the requirements of integrated device manufacturers. | | Buildings: owned |
| ASE Korea | Paju, Korea | March 1967 | An integrated packaging and testing facility that specializes in semiconductors for radio frequency, sensor and automotive applications. | 520,000 | Land and buildings: owned, subject to mortgage |
| ISE Labs | Silicon Valley, California, Austin, Texas Singapore | November 1983 | Front-end engineering and final testing facilities located in northern California in close proximity to some of the world's largest fabless design companies. Testing facilities located in close proximity to integrated device manufacturers and fabless companies in Texas and Southeast Asia. | 264,000 | Land and buildings: leased |
| ASE Shanghai | Shanghai, China | June 2004 | Design and production of semiconductor packaging materials and provision of module assembly services on a contract basis. | 1,071,000 | Land: leased Buildings: owned |

| Power ASE | Chung Li, Taiwan | December 2006 | An integrated packaging and testing facility that specializes in memory semiconductors for personal computers applications | 221,000 | Buildings: leased |
| ASE Weihai Inc. | Shandong, China | Acquired in May 2008 | An integrated packaging and testing facility that specializes in semiconductors for communications, computers and consumer applications. | 70,730 | Land: leased Buildings: owned |

Our leased property in Kaohsiung consists primarily of approximately twenty leases of land in the Kaohsiung Nantze Export Processing Zone between ASE Inc. and ASE Test Taiwan, as the lessees, and the Export Processing Zones Administration, or the EPZA, under the Ministry of Economic Affairs. The leases have ten year terms that expire between the middle of April 2010 and the end of September 2017. No sublease or lending of the land is allowed. The EPZA has the right to adjust the rental price in the event the government revalues the land. The leases are typically renewable with three months notice prior to the termination date.

For information on the aggregate capacity of our facilities in terms of the number of bonders and testers we operate, see “—Business Overview—Equipment.”

Item 4A. Unresolved Staff Comments

None.

Item 5. Operating and Financial Review and Prospects

OPERATING RESULTS AND TREND INFORMATION

The following discussion of our business, financial condition and results of operations should be read in conjunction with our consolidated financial statements, which are included elsewhere in this annual report. This discussion contains forward-looking statements that reflect our current views with respect to future events and financial performance. Our actual results may differ materially from those anticipated in these forward-looking statements as a result of any number of factors, such as those set forth under “Item 3. Key Information—Risk Factors” and elsewhere in this annual report. See “Special Note Regarding Forward-Looking Statements.” Information in this annual report from our consolidated statements of operations for the years ended December 31, 2003, 2004 and 2005 has been adjusted to reflect the reclassification of ASE Test’s camera module assembly operations as discontinued operations following the disposal of these operations in October 2005. Information from our consolidated statements of cash flows was appropriately not adjusted.

Table of Contents

Overview

We offer a broad range of semiconductor packaging and testing services. In addition to offering each service separately, we also offer turnkey services, which consist of the integrated packaging, testing and direct shipment of semiconductors to end users designated by our customers. Our net revenues increased from NT\$84,035.8 million in 2005 and NT\$100,423.6 million in 2006 to NT\$101,163.1 million (US\$3,119.4 million) in 2007.

Discussed below are several factors that have had a significant influence on our financial results in recent years.

Pricing and Revenue Mix

We price our services on a cost-plus basis, taking into account the actual costs involved in providing these services, with reference to prevailing market prices. The majority of our prices and revenues are denominated in U.S. dollars. However, as more than half of our costs, including most of our labor and overhead costs, are denominated in NT dollars, we consider the NT dollar to be our functional currency. Furthermore, the majority of our financing costs are denominated in NT dollars and US dollars.

In the case of semiconductor packaging, the cost of the silicon die, by most accounts the most costly component of the packaged semiconductor, is typically not reflected in our costs (or revenues) since it is typically supplied by our customers on a consignment basis. In the case of module assembly, we typically procure the substantial majority of the components and raw materials to be assembled, including packaged semiconductors, which are reflected both in our costs and our revenues. Compared to semiconductor packaging, module assembly typically generates higher revenues and incurs higher costs for a given amount of gross profit, and affects our margins accordingly.

The semiconductor industry is characterized by a general trend towards declining prices for products and services of a given technology over time. In addition, during periods of intense competition and adverse conditions in the semiconductor industry, the pace of this decline may be more rapid than that experienced in other years. The average selling prices of our packaging and testing services have experienced sharp declines during such periods as a result of intense price competition from other independent packaging and testing companies that attempt to maintain high capacity utilization levels in the face of reduced demand. For example, during the industry downturn commencing in the fourth quarter of 2000, we experienced a significant deterioration in average selling prices, which adversely affected our results of operations in 2001 and 2002. As a result of the modest recovery in the semiconductor industry and a gradual upturn in the outsourcing trend since 2002, our average selling prices for packaging and testing services have stabilized since 2002 as compared to 2001.

The average selling prices of our testing services are more severely affected by a downturn in the semiconductor industry than the average selling prices of our packaging services. In periods of an industry downturn, the decline in the average selling prices of our testing services is often exacerbated by the decrease in demand from our integrated device manufacturer customers, who typically maintain larger in-house testing capacity than in-house packaging capacity. These price declines are also exacerbated by the intense price competition from other independent testing service providers, who typically offer large price discounts during periods of depressed demand, such as in 2001, in order to maintain higher capacity utilization rates to defray the high fixed costs associated with testing operations. In 2005, 2006 and 2007, packaging revenues, including revenues from module assembly, accounted for 78.6%, 76.5% and 77.6% while testing revenues accounted for 20.4%, 21.3% and 19.8%, respectively, of our net revenues.

We believe that, over the long term, the market for outsourced semiconductor testing services has more potential for growth than the market for outsourced semiconductor packaging services for two reasons. First, the portion of the semiconductor testing market that is currently accounted for by independent testing service providers is smaller than that for packaging. Second, the large capital expenditure needed for increasingly sophisticated testing equipment, as

compared to less expensive packaging equipment, is also a driver for further outsourcing of testing services by integrated device manufacturers.

Declines in average selling prices have been partially offset over the last several years by a change in our revenue mix. In particular, revenues derived from packaging more advanced package types, such as flip-chip BGA, higher density packages with finer lead-to-lead spacing, or pitch, and testing of more complex, high-performance semiconductors have increased as a percentage of total revenues. We intend to continue to focus on packaging more advanced package types, such as BGA and flip-chip BGA, developing and offering new technologies in packaging and testing services and expanding our capacity to achieve economies of scale, as well as improving production efficiencies for older technology, in order to mitigate the effects of declining average selling prices on our profitability.

Table of Contents

High Fixed Costs

Our operations, in particular our testing operations, are characterized by relatively high fixed costs. We expect to continue to incur substantial depreciation and other expenses as a result of our previous acquisitions of packaging and testing equipment and facilities. Our profitability depends in part not only on absolute pricing levels for our services, but also on utilization rates for our packaging and testing equipment, commonly referred to as “capacity utilization rates.” In particular, increases or decreases in our capacity utilization rates could have a significant effect on gross margins since the unit cost of packaging and testing services generally decreases as fixed costs are allocated over a larger number of units. The capacity utilization rates of the machinery and equipment installed at our production facilities typically depend on factors such as the volume and variety of products packaged or tested using such machinery and equipment, the efficiency of our operations in terms of the loading and adjustment of machinery and equipment for the packaging or testing of different products, the complexity of the different products to be packaged or tested, the amount of time set aside for the maintenance and repair of the machinery and equipment, and the experience and schedule of work shifts of operators.

The current generation of advanced testers typically cost between US\$1.0 million and US\$3.0 million each, while wire bonders used in packaging typically cost between US\$50,000 and US\$70,000 each. In 2005, 2006 and 2007, our depreciation and amortization as a percentage of net revenues was 16.5%, 13.3% and 15.1%, respectively. The increase in depreciation and amortization as a percentage of net revenues in 2007 compared to 2006 was primarily a result of our acquisition of new subsidiaries, ARESH AT and ASEN, in 2007 without a corresponding increase in revenue in 2007. See “Item 4. Information on the Company—Business Overview—Equipment.” We begin depreciating our equipment when it is placed into service. There may sometimes be a time lag between when our equipment is placed into service and when it achieves high levels of utilization. In periods of depressed industry conditions, we may experience lower than expected demand from customers and a sharp decline in the average selling price of our testing services, resulting in an increase in depreciation relative to net revenues. In particular, the capacity utilization rates for our testing equipment are more severely affected during an industry downturn as a result of the decrease in outsourcing demand from integrated device manufacturers, which typically maintain larger in-house testing capacity than in-house packaging capacity.

In addition to purchasing testers, we also lease a portion of our testers, which we believe allows us to better manage our capacity utilization rates and cash flow. Since testers operated under operating leases can be replaced with more advanced testers upon the expiration of the lease, we believe that these operating leases have enabled us to improve our capacity utilization rates by allowing us to better align our capacity with changes in equipment technology. For more information about our testers, including the number of testers under lease, see “Item 4. Information on the Company—Business Overview—Equipment—Testing.”

Raw Material Costs

Substantially all of our raw material costs are accounted for by packaging and the production of interconnect materials, as testing requires minimal raw materials. In 2005, 2006 and 2007, raw material cost as a percentage of our net revenues was 32.6%, 29.2% and 27.6%, respectively. We expect interconnect materials to become an increasingly important component of the cost of our packaging revenues and we plan to continue to develop and enhance our in-house interconnect materials capabilities in order to maintain and enhance our profitability, ensure an adequate supply of interconnect materials at competitive prices and reduce production time. Our operations originally conducted through ASE Material and now conducted through our wholly-owned subsidiary ASE Electronics and the operations of ASE Shanghai have enhanced our interconnect materials capabilities. For more information on our interconnect materials operations, see “Item 4. Information on the Company—Business Overview—Principal Products and Services—Packaging Services—Interconnect Materials.” As a result of new restrictions in the European Union governing

the use of hazardous substances, we expect that our customers will increasingly request that the materials used in our packaging processes be compliant with new European Union regulations. See “Item 4. Information on the Company—Business Overview—Raw Materials and Suppliers—Packaging.”

Table of Contents

ASE Test Share Acquisition and Privatization

On May 30, 2008, we acquired, by way of a scheme of arrangement under Singapore law, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own, making ASE Test our wholly-owned subsidiary. See “Item 4. Information on the Company—History and Development of the Company—ASE Test Share Acquisition and Privatization.” Prior to this transaction, we held 50.3% of ASE Test and 50.3% of ASE Test’s net income or loss was reflected in our consolidated net income and the remaining 49.7% was reflected as minority interest. As a result of the transaction, we will reflect 100.0% of ASE Test’s net income or loss in our consolidated net income going forward. Any losses at ASE Test would therefore have a greater adverse effect on our net income than prior to the effectiveness of the scheme of arrangement.

Recent ROC GAAP Accounting Pronouncements

In March 2007, the ROC Accounting Research and Development Foundation, or ARDF, required ROC companies to recognize compensation expenses for bonuses paid to employees, directors and supervisors beginning January 1, 2008. Such bonuses are recorded as appropriation of earnings under ROC GAAP before 2008. On March 30, 2007, the ROC Financial Supervisory Commission, Executive Yuan also issued an interpretation which requires that bonuses granted to employees, directors and supervisors in the form of shares be valued at fair market value for purposes of compensation expenses. We believe that the adoption of this standard will result in a charge to earnings of approximately 10% to 12% of our net income. However, the actual percentage to be paid in profit sharing bonuses is subject to the approval of our shareholders.

The ARDF also issued ROC SFAS No. 39, “Share-based Payment,” or ROC SFAS No. 39 in August 2007, which requires ROC companies to record share-based payment transactions in the financial statements at fair value. ROC SFAS No. 39 should be applied to financial statements for fiscal years beginning on or after January 1, 2008. We will recognize compensation expense if we grant new options or revise existing option plans on or after January 1, 2008.

The ARDF revised ROC SFAS No. 10, “Inventories,” or ROC SFAS No. 10 in November 2007, which requires inventories to be stated at the lower of cost or net realizable value. Prior to the revised standard, inventories were stated at the lower of cost or market value (replacement cost or net realizable value). Inventory write-downs are made item by item, except where it may be appropriate to group similar or related items. Net realizable value is the estimated selling price of inventories less all estimated costs of completion and costs necessary to make the sale. Inventories are recorded by the specific identification method, first-in, first-out method or weighted average method. The last-in, first-out method is no longer permitted. The revised ROC SFAS No. 10 should be applied to financial statements for fiscal years beginning on or after January 1, 2009. Early adoption is permitted. We are currently evaluating the effect that the adoption of the revised ROC SFAS No. 10 will have on our results of operations and financial position, and we are not yet in a position to determine such effect.

Critical Accounting Policies and Estimates

Preparation of our consolidated financial statements requires us to make estimates and judgments in applying our critical accounting policies which have a significant impact on the results we report in our consolidated financial statements. We continually evaluate these estimates, including those related to revenue recognition, allowances for doubtful accounts, inventories, allowances for deferred income tax assets, realizability of long-lived assets, goodwill and long-term investments. We base our estimates on historical experience and other assumptions which we believe to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions and conditions. We have identified below the accounting policies that are the most critical to our consolidated financial statements.

Revenue Recognition. Revenues from semiconductor packaging and testing services are recognized upon completion of the services or shipment. We do not take ownership of:

- bare semiconductor wafers received from customers that we package into finished semiconductors; and
- packaged semiconductors received from customers that we test for performance specifications.

The title and risk of loss remains with the customer for those bare semiconductors and/or packaged semiconductors. Accordingly, the cost of customer-supplied semiconductor materials is not included in our consolidated financial statements. Other criteria that we use to determine when to recognize revenue are:

- existence of persuasive evidence of an arrangement;
- the selling price is fixed or determinable; and
- collectibility is reasonably assured.

Table of Contents

These policies are consistent with provisions in the Staff Accounting Bulletin No. 104 issued by the SEC. We do not provide warranties to our customers except in cases of defects in the packaging services provided and deficiencies in testing services provided. An appropriate sales discount is recognized in the period during which the sale is recognized, and is estimated based on historical experience.

Allowance for Doubtful Accounts. We periodically record a provision for doubtful accounts based on our evaluation of the collectibility of our accounts receivable. The total amount of this provision is determined by us as follows. We first identify the receivables of customers that are considered to be a higher credit risk based on their current overdue accounts with us, difficulties collecting from these customers in the past or their overall financial condition. For each of these customers, we estimate the extent to which the customer will be able to meet its financial obligations to us, and we record an allowance that reduces our accounts receivable for that customer to the amount that we reasonably believe will be collected. For all other customers, we maintain an allowance for doubtful accounts equal to a percentage of their aggregate accounts receivable. As of December 31, 2005, 2006 and 2007, the allowance we set aside for doubtful accounts was NT\$382.6 million, NT\$244.4 million and NT\$109.7 million, respectively. Additional allowances may be required in the future if the financial condition of our customers or general economic conditions deteriorate, and this additional allowance would reduce our net income.

Inventories. Inventories are recorded at cost when acquired and stated at the lower of moving or weighted average cost or market value. Unbilled processing charges incurred are included in finished goods and work in progress and are stated at actual cost. Market value for finished goods and work in process is estimated to be the net realizable value. Market value for raw materials, supplies and spare parts is the cost of replacement. Materials received from customers for processing, mainly of semiconductor wafers, are excluded from inventories, as title and risk of loss remains with the customers. An allowance for loss on decline in market value and obsolescence is provided based on the difference between the cost of inventory and the estimated market value based upon assumptions about future demand and market conditions. An additional inventory provision may be required if actual market conditions are less favorable than those projected.

Valuation Allowances for Deferred Income Tax Assets. Tax benefits arising from deductible temporary differences, unused tax credits and net operating loss carryforwards are recognized as deferred income tax assets. We record a valuation allowance to the extent that we believe it is more likely than not that deferred income tax assets will not be realized. We have considered future taxable income and ongoing prudent and feasible tax planning strategies in assessing the need and amount for the valuation allowance. In the event we were to determine that we would be able to realize our deferred income tax assets in the future in excess of our net recorded amount, an adjustment to our deferred income tax assets would increase income in the period such determination was made. Alternatively, should we determine that we would not be able to realize all or part of our deferred income tax assets in the future, an adjustment to our deferred income tax assets would decrease income in the period such determination was made.

Realizability of Long-Lived Assets. We are required to evaluate our equipment and other long-lived assets for impairment whenever there is an indication of impairment. If certain criteria are met, we are required to record an impairment charge.

On December 31, 2004, we adopted ROC SFAS No. 35, "Accounting for Impairment of Assets" to account for the impairment of our long-lived assets under ROC GAAP. In accordance with ROC SFAS No. 35, long-lived assets held and used by us are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. If the recoverable amount increases in a future period, the amount previously recognized as impairment will be reversed and recognized as a gain. However, the adjusted amount may not exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss had been recognized. Prior to 2004, there was no requirement related to the evaluation of recoverability of long-lived

assets' impairment under ROC GAAP, and we applied U.S. Statement of Financial Accounting Standards, or U.S. SFAS, No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" when accounting for impairment of long-lived assets for both ROC GAAP and U.S. GAAP.

Table of Contents

In accordance with U.S. SFAS No. 144, long-lived assets held and used by us are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. For purposes of evaluating the recoverability of long-lived assets, the recoverability test is performed by comparing undiscounted net cash flows of the assets against the net book value of the assets. If the recoverability test indicates that an impairment has occurred, the impairment loss is the amount of the asset's net book value in excess of the related fair value.

In 2005, we recognized a loss of NT\$13,479.1 million on damage to our property, plant and equipment caused by a fire at our facilities in Chung Li, Taiwan. In 2006, we reversed NT\$2,190.6 million of the impairment loss recognized in 2005 under ROC GAAP due to an increase in the estimated service potential of the relevant assets. See note 29 to our consolidated financial statements included in this annual report. Reversal of the amount is prohibited under U.S. GAAP. See note 31 to our consolidated financial statements included in this annual report for a reconciliation of the differences in the cost basis of the damaged machinery and associated depreciation expense. In 2007, we recognized impairment of NT\$816.2 million (US\$25.2 million), based on an independent appraiser's assessment of fair value, on idle assets due to an impairment in our flip-chip substrate production line that was primarily the result of idle capacity caused by lack of demand for certain applications. See note 13 to our consolidated financial statements in this annual report.

Goodwill. Pursuant to a change in ROC GAAP, in 2004, we adopted ROC SFAS No. 35, "Accounting for Asset Impairment." Under ROC SFAS No. 35, goodwill is evaluated at least annually for impairment by comparing the recorded amount of the cash-generating unit to which the goodwill has been allocated to its recoverable amount. Recoverable amount is defined as the higher of a cash-generating unit's fair value less costs to sell or its "value in use", which is defined as the present value of the expected future cash flows generated by the assets. An impairment charge is incurred to the extent the recorded amount exceeds the recoverable amount. Prior to the adoption of ROC SFAS No. 35, we were not required to evaluate goodwill for impairment under ROC GAAP. In 2004, we recognized an impairment charge on goodwill under ROC GAAP in connection with our shares of ASE Test and ISE Labs. As of December 31, 2007, we had goodwill of NT\$3,188.1 million (US\$98.3 million) under ROC GAAP. If events and circumstances warrant in the future, the value of our goodwill could be further impaired under ROC GAAP or U.S. GAAP.

Valuation of Long-term Investments. We hold significant long-term investments in public and non-public entities. We periodically evaluate these long-term investments based on market prices, if available, the financial condition of the investee company, economic conditions in the industry, and our intent and ability to hold the investment for a long period of time. These assessments usually require a significant amount of judgment, as a significant decline in the market price may not be the best indicator of impairment. Under U.S. GAAP, we evaluate long-term investments using the above mentioned criteria and, to the extent any decline in the value of a long-term investment is determined to be other than temporary, an impairment charge is recorded in the current period. The methods to measure the amount of impairment under ROC GAAP and U.S. GAAP may be based on different estimates of fair value depending on the circumstances. Under U.S. GAAP, market price is to be used, if available, to determine the fair value. Under ROC GAAP, however, if the market price is deemed to be a result of an inactive market, other measures of fair value may be used. Several of the long-term investments held by us are accounted for under the equity method. Any significant decline in the operations of an equity method investee could affect the value of the long-term investment and an impairment charge may occur. In 2004, we recorded impairment charges under both ROC GAAP and U.S. GAAP in connection with our investment in Universal Scientific. In 2007, we recognized an impairment of NT\$178.5 million (US\$5.5 million) on our investment in Taiwan Fixed Network Co., Ltd. We disposed of this investment in April 2007.

Table of Contents

Results of Operations

The following table sets forth, for the periods indicated, financial data from our consolidated statements of operations, expressed as a percentage of net revenues.

| | Year Ended December 31, | | |
|--|------------------------------|----------|--------|
| | 2005 | 2006 | 2007 |
| | (percentage of net revenues) | | |
| ROC GAAP: | | | |

Year Ended December 31, 2007 Compared to Year Ended December 31, 2006

Net Revenues. Net revenues increased 0.7% to NT\$101,163.1 million (US\$3,119.4 million) in 2007 from NT\$100,423.6 million in 2006. Packaging revenues increased 2.2% to NT\$78,516.3 million (US\$2,421.1 million) in 2007 from NT\$76,820.5 million in 2006. Testing revenues decreased 6.6% to NT\$20,007.8 million (US\$617.0 million) in 2007 from NT\$21,429.6 million in 2006. The increase in packaging revenues was primarily due to an increase in packaging volume. The decrease in testing revenues was primarily due to a decrease in testing volume. The increase in packaging volume resulted primarily from increased capacity as a result of new operations in the PRC acquired in 2007 and the commencement of our operations for the packaging of memory semiconductors in December 2006. The increase in packaging volume in 2007 is also attributable to the trend of increasing outsourcing of the packaging of semiconductor devices. The decrease in testing volume resulted primarily from the reduction of our customer base in order to allow us to focus on higher-margin customers.

Gross Profit. Gross profit increased 1.1% to NT\$29,088.4 million (US\$897.0 million) in 2007 from NT\$28,780.3 million in 2006. Our gross profit as a percentage of net revenues, or gross margin, remained largely unchanged in 2007 at 28.8%, versus 28.7% in 2006. Our gross margin for packaging increased to 26.2% in 2007 from 25.1% in 2006. This increase was primarily due to a decrease in raw material costs as a percentage of net packaging revenues. Our gross margin for testing decreased to 38.0% in 2007 from 40.7% in 2006. This decrease was primarily due to an increase in depreciation, partially offset by a decrease in rental expense, each as a percentage of net testing revenues. Raw material costs in 2007 were NT\$27,913.1 million (US\$860.7 million), compared to NT\$29,296.2 million in 2006. As a percentage of net revenues, raw material costs decreased to 27.6% in 2007 from 29.2% in 2006, primarily because of a change in our product mix toward packages requiring less expensive raw materials. Depreciation, amortization and rental expenses in 2007 was NT\$16,358.7 million (US\$504.4 million), compared to NT\$15,096.1 million in 2006. As a percentage of net revenues, depreciation, amortization and rental expenses increased to 16.1% in 2007 from 15.0% in 2006.

Operating Income. Operating income decreased 5.6% to NT\$19,297.2 million (US\$595.0 million) in 2007, compared to NT\$20,446.4 million in 2006. Operating expenses increased 17.5% to NT\$9,791.2 million (US\$301.9 million) in 2007, compared to NT\$8,333.9 million in 2006. The increase in operating expenses was primarily due to increases in general and administrative expense and research and development expense, partially offset by a decrease in selling expense. General and administrative expense increased 24.1% to NT\$5,438.5 million (US\$167.7 million) in 2007 from NT\$4,381.3 million in 2006. This increase was primarily the result of an increase in salaries and bonuses expense, primarily as a result of bonuses paid by ASE Test Taiwan under ROC earnings distribution requirements, and, to a lesser extent, an increase in professional fees and other expenses in connection with the privatization of ASE Test. General and administrative expense represented 5.4% of our net revenues in 2007, compared to 4.4% in 2006. Research and development expense increased 24.8% to NT\$3,284.1 million (US\$101.3 million) in 2007 from NT\$2,632.0 million in 2006. This increase was primarily due to increases in salaries and bonuses expense, depreciation and amortization and the cost of factory supplies, each in connection with our new operations in the PRC acquired in 2007. The research and development expenses of our PRC operations were made

with a view towards qualifying for certain PRC tax incentives. Research and development expense accounted for 3.2% of our net revenues in 2007, compared to 2.6% in 2006. Selling expense decreased 19.1% to NT\$1,068.6 million (US\$33.0 million) in 2007 from NT\$1,320.6 million in 2006. This decrease was primarily due to a decrease in commission and sales fees as a result of our moving certain sales functions that were previously handled by a third-party sales agent in-house in 2007. Selling expense as a percentage of net revenues decreased to 1.1% in 2007 from 1.3% in 2006. Our operating income as a percentage of net revenues, or operating margin, decreased to 19.1% in 2007 from 20.4% in 2006, primarily as a result of an increase in operating expenses.

Table of Contents

Non-Operating Income (Expense). We incurred a net non-operating expense of NT\$1,945.3 million (US\$60.0 million) in 2007, compared to a net non-operating income of NT\$1,805.0 million in 2006. This overall decrease was primarily a result of gain on insurance settlement and impairment recovery in 2006 and, to a lesser extent, impairment losses in 2007, partially offset by a decrease in 2007 in loss on inventory valuation and obsolescence and increases in 2007 in net gains on the valuation of financial assets and liabilities and net foreign exchange gains. In 2006, we recognized NT\$4,574.5 million for gain on insurance settlement and impairment recovery in connection with the fire at our facilities in Chung Li, Taiwan in May 2005. For more information on the Chung Li fire, see note 29 to our consolidated financial statements included in this annual report. In 2007, we recognized impairment losses of NT\$994.7 million (US\$30.7 million), primarily in connection with our flip-chip substrate production line, whereas in 2006 we did not recognize any impairment loss. The impairment of our flip-chip substrate production line in 2007 was primarily the result of idle capacity caused by lack of demand for certain applications. We recorded a loss on inventory valuation and obsolescence of NT\$634.4 million (US\$19.6 million) in 2007 compared to a loss on inventory valuation and obsolescence of NT\$1,143.9 million in 2006, which resulted primarily from changes in our customer base in connection with our strategy of focusing on higher-margin customers. We recorded net gains on the valuation of financial assets and liabilities and foreign exchange of NT\$692.5 million (US\$21.3 million) in 2007 compared to net loss of NT\$111.0 million in 2006. The net gains in 2007 were primarily due to the appreciation of the RMB against the U.S. dollar and the fact that U.S. dollar liabilities exceed U.S. dollar assets for our operations in the PRC.

Net Income. Net income decreased 30.1% to NT\$12,165.3 million (US\$375.1 million) in 2007 from NT\$17,416.2 million in 2006. Our net income per ADS decreased to NT\$11.29 (US\$0.35) in 2007, compared to a net income per ADS of NT\$16.26 in 2006 (retroactively adjusted to account for stock dividends issued in 2007). Our income tax expense increased 61.0% to NT\$3,357.4 million (US\$103.5 million) in 2007 from NT\$2,084.8 million in 2006, primarily due to the use of tax credits, a tax on undistributed earnings of our domestic subsidiaries and a withholding tax on dividends imposed on some of our foreign subsidiaries.

Year Ended December 31, 2006 Compared to Year Ended December 31, 2005

Net Revenues. Net revenues increased 19.5% to NT\$100,423.6 million in 2006 from NT\$84,035.8 million in 2005. Packaging revenues increased 16.4% to NT\$76,820.5 million in 2006 from NT\$66,022.9 million in 2005. Testing revenues increased 25.2% from NT\$21,429.6 million in 2006 to NT\$17,122.0 million in 2005. The increase in packaging revenues was primarily due to an increase in packaging volume. The increase in testing revenues was due to an increase in average selling prices for testing services. The increase in packaging volume resulted primarily from an improvement in market conditions in the semiconductor industry and the increase in outsourcing of the packaging of semiconductor devices. The increase in average selling prices for testing services reflects the fact that we are increasingly employing advanced testing equipment, which is charged out at a higher rate, and the fact that testing of complex, high-performance logic/mixed-signal semiconductors, which typically take longer to test, accounted for a greater portion of our testing volumes. We also made certain changes to our pricing in the second half of 2005 and in 2006 that improved our average selling prices for testing services. In response to tight capacity in the testing markets generally, we increased the prices for certain of our testing services in the second half of 2005 and further in 2006, including charging our customers for certain ancillary services that we previously provided without charge. The increase in average selling prices for testing services was partially offset by the general trend in the semiconductor industry of declining prices for each input/output lead on a semiconductor device.

Gross Profit. Gross profit increased 98.2% to NT\$28,780.3 million in 2006 from NT\$14,517.8 million in 2005. Our gross profit as a percentage of net revenues, or gross margin, increased to 28.7% in 2006 from 17.3% in 2005. This increase was due to an increase in revenues and, to a lesser extent, a decrease in cost of goods sold as a percentage of revenues, in particular raw material costs and depreciation. Our gross margin for packaging increased to 25.1% in 2006 from 15.3% in 2005. This increase was due to an increase in revenues and, to a lesser extent, a decrease in cost

of goods sold as a percentage of revenues, in particular raw material costs. Our gross margin for testing increased to 40.7% in 2006 from 25.9% in 2005. This increase was primarily due to an increase in revenues and, to a lesser extent, a decrease in cost of goods sold as a percentage of revenues, in particular depreciation. Raw material costs in 2006 were NT\$29,296.2 million, compared to NT\$27,430.2 million in 2005. As a percentage of net revenues, raw material costs decreased to 29.2% in 2006 from 32.6% in 2005, primarily because of a change in our product mix toward packages requiring less expensive raw materials and a decrease in the price of the raw materials we use in our packaging operations. Depreciation and amortization in 2006 was NT\$13,313.0 million, compared to NT\$13,830.2 million in 2005. As a percentage of net revenues, depreciation and amortization decreased to 13.3% in 2006 from 16.5% in 2005, primarily as a result of a net decrease in testing and packaging equipment in 2006, largely as a result of the fire at our facilities in Chung Li, Taiwan in May 2005, and due to improved equipment utilization.

Table of Contents

Operating Income. We had an operating income of NT\$20,446.4 million in 2006, compared to NT\$5,819.2 million in 2005. Operating expenses decreased 4.2% to NT\$8,333.9 million in 2006, compared to NT\$8,698.6 million in 2005. The decrease in operating expenses was primarily due to decreases in general and administrative expense and research and development expense, partially offset by an increase in selling expense. General and administrative expense decreased 9.0% to NT\$4,381.3 million in 2006 from NT\$4,813.2 million in 2005. This decrease was primarily the result of a decrease in goodwill amortization, partially offset by increases in depreciation and amortization and professional fees. We recognized no goodwill amortization in 2006, compared to NT\$528.9 million, or 0.6% of our net revenues, in 2005. In accordance with ROC SFAS No. 25, "Business Combinations—Accounting Treatment under Purchase Method," beginning in 2006, goodwill is no longer amortized and is instead tested for impairment annually. General and administrative expense represented 4.4% of our net revenues in 2006, compared to 5.7% in 2005. Research and development expense decreased 5.5% to NT\$2,632.0 million in 2006 from NT\$2,785.4 million in 2005. This decrease was primarily due to a decrease in the costs for reconfiguring and upgrading our testing equipment as a result of our obtaining a lower price for these services from our service providers. Research and development expense accounted for 2.6% of our net revenues in 2006, compared to 3.3% in 2005. Selling expense increased 20.1% to NT\$1,320.6 million in 2006 from NT\$1,100.0 million in 2005. This increase was primarily due to an increase in commission and sales fees. Selling expense as a percentage of net revenues remained the same between 2006 and 2005 at 1.3%. Our operating income as a percentage of net revenues, or operating margin, increased to 20.4% in 2006 from 6.9% in 2005, primarily as a result of the increase in our gross margin.

Non-Operating Income (Expense). We incurred a net non-operating income of NT\$1,805.0 million in 2006, compared to a net non-operating expense of NT\$11,493.0 million in 2005. This overall increase was primarily a result of an our recognition in 2005 of NT\$8,838.1 million for loss on fire damage in connection with a fire at our facilities in Chung Li, Taiwan in May 2005 and our recognition of NT\$4,574.5 million for gain on insurance settlement and impairment recovery in 2006. For more information, see note 29 to our consolidated financial statements included in this annual report.

Net Income. We had a net income of NT\$17,416.2 million in 2006, compared to a net loss of NT\$4,691.2 million in 2005. Our net income per ADS was NT\$16.26 in 2006, compared to a loss per ADS of NT\$4.62 in 2005 (retroactively adjusted to account for stock dividends issued in 2005 and 2007). We had an income tax expense of NT\$2,084.8 million in 2006, compared to an income tax benefit of NT\$118.6 million in 2005, primarily due to an increase in taxable income and the ROC Alternative Minimum Tax Act, which became effective on January 1, 2006.

Quarterly Net Revenues, Gross Profit and Gross Margin

The following table sets forth our unaudited consolidated net revenues, gross profit and gross margin for the quarterly periods indicated. The unaudited quarterly results reflect all adjustments, consisting of normal recurring adjustments, that, in the opinion of management, are necessary for a fair presentation of the amounts, on a basis consistent with the audited consolidated financial statements included elsewhere in this annual report. You should read the following table in conjunction with the audited consolidated financial statements and related notes included elsewhere in this annual report. Our net revenues, gross profit and gross margin for any quarter are not necessarily indicative of the results for any future period. Our quarterly net revenues, gross profit and gross margin may fluctuate significantly.

Our results of operations are affected by seasonality. Our first quarter net revenues have historically decreased over the preceding fourth quarter, primarily due to the combined effects of holidays in the United States, Taiwan and elsewhere in Asia. Moreover, the increase or decrease in net revenues of a particular quarter as compared with the immediately preceding quarter varies significantly. See “Item 3. Key Information—Risk Factors—Risks Relating to Our Business—Our operating results are subject to significant fluctuations, which could adversely affect the market value of your investment.”

Exchange Rate Fluctuations

For quantitative and qualitative disclosure of our exposure to foreign currency exchange rate risk, see “Item 11. Quantitative and Qualitative Disclosures about Market Risk—Market Risk—Foreign Currency Exchange Rate Risk.”

Taxation

The regular corporate income tax rate in the ROC applicable to us is 25%. Under the ROC Statute of Upgrading Industries, which gives certain preferential tax treatment to companies that qualify as operating in a “newly-emerging important and strategic industry” or “manufacturing industry”, we may apply for tax holidays covering the portion of our income allocable to eligible machinery and equipment upon receipt of a cash infusion from our shareholders, including through rights offerings, if the proceeds of which are used to purchase eligible machinery and equipment. We may also apply for this tax holiday after the capitalization of retained earnings through the issuance of stock dividends. See note 21 to our consolidated financial statements included in this annual report. As of May 30, 2008, we have five five-year tax exemptions on income derived from a portion of our operations in Kaohsiung, Taiwan. One such exemption will expire on September 30, 2009. We are in the process of applying for the use of the remaining four exemptions in connection with our operations in Kaohsiung, Taiwan, following the completion of related capacity expansions. As of May 30, 2008, we had also received two five-year tax exemptions for a cash injection from our shareholders in connection with our operations in Chung Li, Taiwan. Both exemptions will expire at the end of

2011.

ASE Test Taiwan has one five-year tax exemption that will expire at the end of 2010 on income derived from a portion of its testing operations. ASE Test Taiwan also plans to apply for an additional five-year exemption following the completion of related capacity expansions.

Power ASE has one five-year tax exemption that will expire in the third quarter of 2012 on income derived from a portion of its testing and packaging operations. It also plans to apply for an additional five-year tax exemption following the completion of related capacity expansions.

54

Table of Contents

Under the ROC Statute for Upgrading Industries, we are also entitled to tax credit to be applied to the purchase of qualifying manufacturing equipment. The tax credits were set at 11%, 7% and 7% for 2005, 2006 and 2007, respectively, and are expected to remain at 7% in 2008. We are also entitled to tax credits set at 30% of the amount spent on qualifying research and development expenses and employee training expenses. These tax credits generally expire five years following their respective grants and are available to reduce 50% of our income taxes payable in the first four years and 100% of such taxes payable in the fifth year, subject to the application of the Alternative Minimum Tax Act, or AMT Act, discussed below.

ASE Test Malaysia obtained “pioneer” tax status and was granted a five-year tax exemption which expired on June 30, 2004. This tax exemption resulted in tax savings for us of approximately NT\$642.3 million and NT\$481.2 million in 2004 and 2003, respectively. In order to qualify for a more beneficial reinvestment allowance, ASE Test Malaysia applied for and was granted cancellation of its pioneer status, which was deemed to have been cancelled on September 21, 2002. ASE Test Malaysia’s current reinvestment allowance applies to certain qualifying facilities and machinery and allows it to reduce its tax payments on income from operations that use such facilities and machinery. The term of this reinvestment allowance is 2003 through 2017.

In addition, since we have facilities located in special export zones such as the Nantze Export Processing Zone in Taiwan and the Bayan Lepas Free Industrial Zone in Malaysia, we enjoy exemptions from various import duties, commodity taxes and sales taxes on imported machinery, equipment, raw materials and components which are directly used for manufacturing finished goods. Finished goods produced by companies located in these zones and exported or sold to others within the zones are exempt from otherwise applicable commodity or business taxes in Taiwan and customs duties and sales taxes in Malaysia.

Our effective income tax rate was 0% in 2005 primarily as a result of tax credits generated from qualifying equipment purchases made at our facilities in Kaohsiung, Taiwan. In 2006, our effective income tax rate increased to 9% primarily due to the increase of taxable income and the AMT Act, as described below, effective on January 1, 2006. In 2007, our effective income tax rate increased to 19% primarily due to (1) the use of tax credits; (2) undistributed earnings tax on our domestic subsidiaries; and (3) withholding tax on dividends imposed on some of our foreign subsidiaries. We believe that our future estimated taxable income will be sufficient to realize the current and long-term portion of our net deferred tax assets recorded as of December 31, 2007.

Under the ROC Income Tax Act, all earnings generated in a year which are not distributed to shareholders as dividends in the following year will be assessed a 10% undistributed earnings tax. As a result, if we do not distribute all of our annual earnings as either cash or stock dividends in the following year, these undistributed earnings will be subject to the 10% undistributed earnings tax.

The ROC government enacted the AMT Act, which became effective on January 1, 2006. The alternative minimum tax, or AMT, imposed under the AMT Act is a supplemental tax which is payable if the income tax payable pursuant to the ROC Income Tax Act is below the minimum amount prescribed under the AMT Act. The taxable income for calculating the AMT includes most income that is exempted from income tax under various legislations, such as tax holidays. The AMT rate for business entities is 10%. However, the AMT Act grandfathered certain tax exemptions granted prior to the enactment of the AMT Act.

Inflation

We do not believe that inflation in Taiwan or elsewhere has had a material impact on our results of operations.

U.S. GAAP Reconciliation

Our consolidated financial statements are prepared in accordance with ROC GAAP, which differ in certain material respects from U.S. GAAP. The following table sets forth a comparison of our net income and shareholders' equity in accordance with ROC GAAP and U.S. GAAP as of and for the periods indicated.

55

Table of Contents

| | As of and For the Year Ended December 31, | | | |
|-----------------------------|---|----------|----------|---------|
| | 2005 | 2006 | 2007 | |
| | NT\$ | NT\$ | NT\$ | US\$ |
| | (in millions) | | | |
| Net income (loss): | | | | |
| ROC GAAP | (4,691.2) | 17,416.2 | 12,165.2 | 375.1 |
| U.S. GAAP | (5,530.5) | 14,122.7 | 9,931.1 | 306.2 |
| Total shareholders' equity: | | | | |
| ROC GAAP | 54,850.3 | 77,126.8 | 89,739.9 | 2,767.2 |
| U.S. GAAP | 44,959.3 | 60,584.1 | 70,101.4 | 2,161.6 |

Note 31 to our consolidated financial statements included in this annual report provides a description of the significant differences between ROC GAAP and U.S. GAAP as they relate to us and a reconciliation of net income and shareholders' equity. Significant differences between ROC GAAP and U.S. GAAP, which primarily affect our net income as reported under ROC GAAP, include impairment loss reversal, impairment of goodwill and long-term investments and compensation expense pertaining to bonuses to employees, directors and supervisors.

Recent U.S. GAAP Accounting Pronouncements

In July 2006, the FASB issued FASB Interpretation No.48, "Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109" ("FIN 48"). FIN 48 clarifies the accounting for uncertainty in income taxes by prescribing the recognition threshold a tax position is required to meet before being recognized in the financial statements. It also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, disclosure, and transition. FIN 48 is effective for us beginning on January 1, 2007. The cumulative effects of applying FIN 48 were recorded as an adjustment to retained earnings as of the beginning of the period of adoption. In connection with the adoption of FIN 48, we recognized a decrease in our retained earnings as of the beginning of 2007 of NT\$24.2 million (net of tax effect) under U.S. GAAP.

In September 2006, the FASB issued U.S. SFAS No. 157, "Fair Value Measurements," which defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurements. U.S. SFAS No. 157 does not require any new fair value measurements, but brings up guidance on how to measure fair value by providing a fair value hierarchy used to classify the source of the information. This statement is effective for us beginning January 1, 2008. We do not expect the adoption of U.S. SFAS No.157 to impact our consolidated financial position or results of operations.

In February 2007, the FASB issued U.S. SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities—Including an Amendment of FASB Statement No.115." This statement permits companies to choose to measure eligible items at fair value at specified election dates and report unrealized gains and losses in earnings at each subsequent reporting date on items for which the fair value option has been elected. The objective of this statement is to improve financial reporting by providing companies with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. We may decide whether to elect the fair value option for each eligible item on its election date, subject to certain requirements described in the statement. U.S. SFAS No. 159 is effective for fiscal years beginning after November 15, 2007. We are currently evaluating the effect that the adoption of U.S. SFAS No. 159 will have on our results of operations and financial position and we are not yet in a position to determine such effects.

In December 2007, the FASB issued U.S. SFAS No. 141R, "Business Combination" (U.S. SFAS No. 141R) and U.S. SFAS No. 160, "Non-controlling Interests in Consolidated Financial Statements—An Amendment of ARB No. 51." U.S.

SFAS No. 141R requires most of the assets acquired and liabilities assumed in the business combination to be measured at fair value as of the acquisition date. In addition, the net assets of non-controlling interests' share of the acquired subsidiaries should be recognized at fair value. U.S. SFAS No. 160 requires us to include non-controlling interests as a separate component of shareholders' equity, instead of liability or temporary equity. U.S. SFAS No. 141R is effective for us for business combinations consummated on or after January 1, 2009 and U.S. SFAS No. 160 is effective for us beginning after January 1, 2009. We are currently evaluating the effect that the adoption of U.S. SFAS No. 141R and U.S. SFAS No. 160 will have on our results of operations and financial position and we are not yet in a position to determine such effects.

Table of Contents

In March 2007, the FASB issued U.S. SFAS No. 161, “Disclosures about Derivative Instruments and Hedging Activities – An Amendment of FASB Statement No. 133.” U.S. SFAS No. 133, “Accounting for Derivative Instruments and Hedging Activities,” does not provide adequate information about how derivative and hedging activities affect an entity’s financial position, financial performance, and cash flows. Accordingly, U.S. SFAS No. 161 requires enhanced disclosures about an entity’s derivative and hedging activities and thereby improves the transparency of financial reporting. U.S. SFAS No. 161 is effective for fiscal years and interim periods beginning after November 15, 2008. We do not expect the adoption of U.S. SFAS No. 161 to have a material effect on our financial position, results of operations, or cash flows.

In May 2008, the FASB issued U.S. SFAS No. 162, “The Hierarchy of Generally Accepted Accounting Principles.” This new standard sets out the framework for selecting accounting principles to be used in preparing financial statements that are presented in conformity with U.S. GAAP. Up to now, the U.S. GAAP hierarchy has been defined in the U.S. auditing literature. U.S. SFAS 162 will be effective 60 days following the SEC’s approval of the Public Company Accounting Oversight Board’s amendments to their auditing standards. We do not believe the adoption of U.S. SFAS No. 162 will have a significant impact on our results of operations and financial position.

LIQUIDITY AND CAPITAL RESOURCES

We have historically been able to satisfy our working capital needs from our cash flow from operations. We have historically funded our capacity expansion from internally generated cash and, to the extent necessary, the issuance of equity securities and long-term borrowings. If adequate funds are not available on satisfactory terms, we may be forced to curtail our expansion plans. Moreover, our ability to meet our working capital needs from cash flow from operations will be affected by the demand for our packaging and testing services, which in turn may be affected by several factors. Many of these factors are outside of our control, such as economic downturns and declines in the prices of our services caused by a downturn in the semiconductor industry. See “Item 3. Key Information—Risk Factors—Risks Relating to Our Business—Our operating results are subject to significant fluctuations, which could adversely affect the market value of your investment.” The average selling prices of our packaging and testing services are likely to be subject to further downward pressure in the future. To the extent we do not generate sufficient cash flow from our operations to meet our cash requirements, we will have to rely on external financing.

Net cash provided by operating activities amounted to NT\$28,306.8 million (US\$872.9 million) in 2007, primarily as a result of adjusting for non-cash depreciation and amortization of NT\$16,626.1 million. Net cash provided by operating activities amounted to NT\$37,290.0 million in 2006, partially as a result of adjusting for non-cash depreciation and amortization, and, to a lesser extent, for gain on insurance settlement and impairment recovery of NT\$9,913.8 million. Net cash provided by operating activities amounted to NT\$18,751.0 million in 2005, partially as a result of adjusting for non-cash depreciation and amortization, including amortization of goodwill, and loss on fire damage of NT\$23,774.5 million. The decrease in net cash provided by operating activities in 2007 compared to 2006 was primarily due to a decrease in net income to NT\$12,165.3 million (US\$375.1 million) in 2007 from NT\$17,416.2 million in 2006 and a net increase in notes and accounts receivable of NT\$9,634.0 million (US\$297.1 million), partially offset by non-cash gain on insurance settlement and impairment recovery of NT\$4,574.5 million in 2006 and a net increase in notes and accounts payable of NT\$4,341.3 million (US\$133.9 million). The increase in net cash generated by operating activities in 2006 compared to 2005 was primarily due to a significant increase in net income to NT\$17,416.2 million in 2006 from a net loss of NT\$4,691.2 million in 2005 and net decreases in financial assets for trading and notes and accounts receivable of NT\$10,773.9 million, partially offset by a non-cash gain on insurance settlement and impairment recovery of NT\$4,574.5 million in 2006 compared to a non-cash loss on fire damage of NT\$8,212.8 million in 2005.

Table of Contents

Net cash used in investing activities amounted to NT\$18,108.4 million (US\$558.4 million) in 2007, primarily due to the acquisition of property, plant and equipment, such as machinery and equipment for our packaging, testing and interconnect materials operations, of NT\$17,190.4 million (US\$530.1 million). Net cash used in investing activities amounted to NT\$22,104.5 million in 2006, primarily due to the acquisition of property, plant and equipment, such as machinery and equipment for our packaging, testing and interconnect materials operations, of NT\$17,764.2 million and, to a lesser extent, the net increase acquisition of available-for-sale financial assets of NT\$9,134.1 million, partially offset by proceeds from insurance claims of NT\$5,768.0 million. Net cash used in investing activities amounted to NT\$11,632.0 million in 2005, primarily due to the acquisition of property, plant and equipment, such as machinery and equipment for our packaging, testing and interconnect materials operations, of NT\$15,611.5 million, partially offset by insurance proceeds in connection with the fire damage incurred at our facilities in Chung Li, Taiwan in May 2005.

Net cash used in financing activities in 2007 amounted to NT\$8,488.9 million (US\$261.8 million). This amount reflected primarily the issuance of cash dividends of NT\$6,941.0 million, (US\$214.0 million) and a decrease in long-term debts of NT\$4,639.5 million (US\$143.1 million), which was partially offset by an increase in short-term borrowings of NT\$3,784.1 million (US\$116.7 million). Net cash used in financing activities in 2006 amounted to NT\$12,561.1 million. This amount reflected primarily a decrease in long-term debts of NT\$13,745.7 million. Net cash used in financing activities in 2005 amounted to NT\$91.8 million. This amount reflected primarily a decrease in long-term debts of NT\$3,221.9 million, which was partially offset by an increase in short-term borrowings of NT\$3,638.4 million.

As of December 31, 2007, our primary source of liquidity was NT\$17,157.9 million (US\$529.1 million) of cash and NT\$11,058.3 million (US\$341.0 million) of financial assets—current. Our financial assets—current primarily consisted of investments in open-ended mutual funds. As of December 31, 2007, we had total unused short-term credit lines of NT\$44,336.8 million (US\$1,367.2 million), and total unused long-term credit lines of NT\$13,134.3 million (US\$405.0 million). As of December 31, 2007, we had working capital of NT\$21,151.1 million (US\$652.2 million).

As of December 31, 2007, we had total borrowings of NT\$39,709.9 million (US\$1,224.5 million), NT\$9,072.1 million (US\$279.7 million) of which were short-term borrowings and NT\$30,637.8 million (US\$944.8 million) of which were long-term borrowings. The interest rate for borrowings under our short-term borrowings ranged from 2.37% to 6.80% per year as of December 31, 2007. Our short-term loans are primarily revolving facilities with a term of one year, each of which may be extended on an annual basis with lender consent, and to a lesser extent, are loans for letters of credit and short-term bills payable. Our long-term borrowings consist primarily of bank loans, bonds payable and capital lease obligations. As of December 31, 2007, we had outstanding long-term borrowings, less current portion, of NT\$23,936.0 million (US\$738.1 million). As of December 31, 2007, the current portion of our long-term borrowings was NT\$6,701.8 million (US\$206.7 million). Our long-term borrowings carried variable interest rates which ranged between 1.90% and 7.56% per year as of December 31, 2007.

We have pledged a portion of our assets, with a carrying value of NT\$8,497.7 million (US\$262.0 million) as of December 31, 2007, to secure our obligations under our short-term and long-term facilities.

In March 2008, we entered into a syndicated loan agreement with a banking syndicate led by Citibank, N.A., Taipei Branch for a NT\$24,750.0 million (US\$763.2 million) term loan facility. We have drawn down NT\$17,500.0 million from this facility to finance a portion of the consideration for our acquisition, by way of a scheme of arrangement under Singapore law, of all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own. We are in the process of negotiating revisions to the loan agreement that would allow us to draw down the amounts remaining under the facility. In May 2008, we entered into an additional syndicated loan agreement with a banking syndicate led by Citibank, N.A., Taipei Branch for a US\$200.0 million term loan facility, also for the purposes of financing our acquisition of ASE Test's outstanding ordinary shares. As of June 4, 2008, we had drawn

down the entire balance of this facility.

In November 2005, we and ASE Test Taiwan entered into a US\$100.0 million three-year revolving receivables acquisition and servicing agreement with ABN Amro Bank N.V. whereby we and ASE Test, Inc. agree to sell and ABN Amro Bank N.V. agrees to buy certain eligible receivables. The credit line under this facility was increased to US\$200 million in June 2006. The total accounts receivable sold under this facility as of December 31, 2005 and 2006 was NT\$3,915.0 million and NT\$4,608.2 million, respectively. The agreement was terminated early in December 2007. See “—Off-Balance Sheet Arrangements.”

58

Table of Contents

In August 2005, ASE Test Finance Limited entered into a US\$78.0 million five-year syndicated credit facility for which Citibank, N.A., Taipei Offshore Banking Branch and Citigroup Global Markets Asia Limited acted as arrangers and Citibank, N.A., Taipei Offshore Banking Branch acted as agent. We and ASE Test act as the guarantors for ASE Test Finance Limited. The proceeds were used for the repayment of loans incurred by ASE Test and ASE Test Finance Limited. The facility bears interest at LIBOR plus 0.875% per annum.

In March 2005, ASE Shanghai entered into a US\$119.0 million five-year syndicated credit facility for which the Hongkong and Shanghai Banking Corporation Limited, Shanghai Branch acted as arranger and agent. We agreed to act as guarantor for ASE Shanghai. We used US\$119 million to refinance exiting credit facilities to fund our capital expenditure requirements. The facility bears interest at LIBOR plus 0.75% per annum.

In connection with our leasing of testing equipment, in August 2004, we, along with ASE Test Taiwan, entered into an agreement with a syndicate of banks arranged by Citibank, N.A., Taipei Branch whereby such syndicate agreed to purchase up to US\$90.0 million of qualifying lease receivables from eligible leasing companies for twelve months from the date of the agreement. As evidence of the obligations entered into under the transaction, we and ASE Test Taiwan issued promissory notes to such leasing companies indorsed to Citibank, N.A., Taipei Branch. The leasing companies also executed a mortgage agreement granting Citibank N.A., Taipei Branch a mortgage on the leased equipment. This agreement expired in August 2005.

In January 2004, we issued eleven series of secured non-convertible bonds in the aggregate principal amount of NT\$2.75 billion. These bonds bear semi-annual interest at floating LIBOR-based rates. We are required to repay half of the aggregate principal amount of the bonds in January 2008 with the remaining due in January 2009. Our payment obligations under the bonds are secured by guarantees provided by syndicate banks pursuant to a guarantee agreement entered into in December 2003, for which Chinatrust Commercial Bank, Ltd. and The Hongkong and Shanghai Banking Corporation Limited, Taipei Branch acted as arrangers.

In September 2003, we issued US\$200 million in aggregate principal amount of zero coupon convertible bonds due 2008. The convertible bonds are convertible into our common shares and ADSs. In April 2005, we repurchased in the market US\$15 million of the convertible bonds. As of April 30, 2008, these convertible bonds are convertible into our common shares at a conversion price of NT\$26.59 per common share. As of April 30, 2008, US\$132.9 million of the convertible bonds had not been converted.

Our long-term loans and facilities contain various financial and other covenants that could trigger a requirement for early payment. Among other things, these covenants require the maintenance of certain financial ratios, such as liquidity ratio, indebtedness ratio, interest coverage ratio and other technical requirements. In general, covenants in the agreements governing our existing debt, and debt we may incur in the future, may materially restrict our operations, including our ability to incur debt, pay dividends, make certain investments and payments, other than in connection with restructurings of consolidated entities, and encumber or dispose of assets. A default under one debt instrument may also trigger cross-defaults under our other debt instruments. An event of default under any debt instrument, if not cured or waived, could have a material adverse effect on our liquidity, as well as our financial condition and operations.

We have on occasion failed to comply with certain financial covenants in some of our loan agreements. Such non-compliance may also have, through broadly worded cross-default provisions, resulted in default under some of the agreements governing our other existing debt. For example, we failed to comply with certain debt ratios in some of our loan agreements as a result of additional borrowings to fund increased capital expenditures in 2004 without an increase in net income and as a result of the fire at our facilities in Chung Li, Taiwan in May 2005. By July 2005, we had either obtained waivers for, or refinanced on a long-term basis, all of the relevant loans, and as such are not in default under any of our existing debt. We cannot assure you that we will be able to remain in compliance with our

financial covenants under our loan agreements. The syndicated loan agreements that we entered into in connection with our privatization of ASE Test in May 2008 may make it more difficult for us to maintain certain financial ratios or to incur additional debt that may be necessary to fund our operations, expansion or other initiatives. In the event of default, we may not be able to cure the default or obtain a waiver, and our operations could be significantly disrupted and harmed. See “Item 3. Key Information—Risk Factors—Risks Relating to Our Business—Restrictive covenants and broad default provisions in our existing debt agreements may materially restrict our operations as well as adversely affect our liquidity, financial condition and results of operations.”

Table of Contents

Our contingent obligations consist of guarantees provided by us to our subsidiaries. As of December 31, 2007, we endorsed and guaranteed the promissory notes of our subsidiaries in the amount of NT\$7,273.7 million (US\$224.2 million). Other than such guarantees, we have no other contingent obligations.

We have made, and expect to continue to make, substantial capital expenditures in connection with the expansion of our production capacity. The table below sets forth our principal capital expenditures incurred for the periods indicated.

| | Year Ended December 31, | | | US\$ |
|---------------------------|-------------------------|--------------|--------------|-------|
| | 2005 NT\$ | 2006 NT\$ | 2007 NT\$ | |
| | (in millions) | | | |
| Machinery and equipment | 11,883.3 | 13,491.2 | 14,592.8 | 450.0 |
| Building and improvements | 1,074.1 | 4,239.7 | 3,579.4 | 110.4 |

We have budgeted capital expenditures of approximately US\$450.0 million for 2008, primarily to purchase machinery and equipment in connection with the expansion of our packaging, testing, and interconnect materials operations. We may adjust the amount of our capital expenditures upward or downward based on market conditions, the progress of our expansion plans and cash flow from operations. Due to the rapid changes in technology in the semiconductor industry, we frequently need to invest in new machinery and equipment, which may require us to raise additional capital. We cannot assure you that we will be able to raise additional capital should it become necessary on terms acceptable to us or at all. See “Item 3. Key Information—Risk Factors—Risks Relating to Our Business—Because of the highly cyclical nature of our industry, our capital requirements are difficult to plan. If we cannot obtain additional capital when we need it, our growth prospects and future profitability may be adversely affected.”

We believe that our existing cash, marketable securities, expected cash flow from operations and existing credit lines under our loan facilities will be sufficient to meet our capital expenditures, working capital, cash obligations under our existing debt and lease arrangements, and other requirements for at least the next twelve months. We currently hold cash primarily in U.S. dollars, New Taiwan dollars, Malaysian ringgit, PRC renminbi, Japanese yen and Korean won. As of December 31, 2007, we had contractual obligations of NT\$33,842.5 million (US\$1,043.6 million) due in the next three years. We currently expect to meet our payment obligations through the expected cash flow from operations, long-term borrowings and the issuance of additional equity or equity-linked securities. We will continue to evaluate our capital structure and may decide from time to time to increase or decrease our financial leverage through equity offerings or borrowings. The issuance of additional equity or equity-linked securities may result in additional dilution to our shareholders.

From time to time, we evaluate possible investments, acquisitions or divestments and may, if a suitable opportunity arises, make an investment, acquisition or divestment. We currently plan to make an additional capital injection in ARESH AT of US\$60.0 million. Apart from this, we currently have no commitments to make any material investment, acquisition or divestment.

Our treasury team, under the supervision of our chief financial officer, is responsible for setting our funding and treasury policies and objectives. Our exposure to financial market risks relate primarily to changes in interest rates and foreign currency exchange rates. To mitigate these risks, we utilize derivative financial instruments, the application of which is primarily to manage these exposures, and not for speculative purposes.

We have, from time to time, entered into interest rate swap and interest rate swaption transactions to hedge our interest rate exposure. As of December 31, 2007, we had NT\$2,750.0 million (US\$84.8 million) outstanding in interest rate swap contracts. See “Item 11. Quantitative and Qualitative Disclosures about Market Risk—Market Risk—Interest Rate

Risk.” We have entered into foreign currency option contracts and forward exchange contracts to hedge our existing assets and liabilities denominated in foreign currencies and identifiable foreign currency purchase commitments. As of December 31, 2007, we had no outstanding foreign currency option contracts and US\$234.0 million outstanding in forward contracts. In October 2003, we entered into cross-currency swap contracts to hedge against exchange rate fluctuations in connection with our US\$200.0 million zero coupon convertible bonds due 2008, of which US\$15.0 million were repurchased in the market in April 2005. The final outstanding amount under these contracts expired in October 2007, and we have subsequently entered into a number of smaller, monthly cross-currency swap contracts. As of December 31, 2007, we had US\$139.2 million outstanding in cross-currency swap contracts. See “Item 11. Quantitative and Qualitative Disclosures about Market Risk” and note 5 to our consolidated financial statements included in this annual report.

Table of Contents

RESEARCH AND DEVELOPMENT

For 2005, 2006 and 2007, our research and development expenditures totaled approximately NT\$2,785.4 million, NT\$2,632.0 million and NT\$3,284.1 million (US\$101.3 million), respectively. These expenditures represented approximately 3.3%, 2.6% and 3.2% of net revenues in 2005, 2006 and 2007, respectively. We have historically expensed all research and development costs as incurred and none is currently capitalized. As of April 30, 2008, we employed 2,394 employees in research and development.

Packaging

We centralize our research and development efforts in packaging technology in our Kaohsiung, Taiwan facilities. After initial phases of development, we conduct pilot runs in one of our facilities before new technologies or processes are implemented commercially at other sites. Facilities with special product expertise, such as ASE Korea, also conduct research and development of these specialized products and technologies at their sites. One of the areas of emphasis for our research and development efforts is improving the efficiency and technology of our packaging processes. We expect these efforts to continue. We are now also putting significant research and development efforts into the development and adoption of new technology. We work closely with the manufacturers of our packaging equipment, including Towa Corporation and Kulicke & Soffa Industries Inc., in designing and modifying the equipment used in our production process. We also work closely with our customers to develop new product and process technology.

A significant portion of our research and development efforts is also focused on the development of advanced substrate production technology for BGA packaging. Substrate is the principal raw material for BGA packages. Development and production of advanced substrates involve complex technology and, as a result, high quality substrates are currently available only from a limited number of suppliers, located primarily in Japan. We believe that our successful development of substrate production capability has, among other things, enabled us to capture an increasingly important value-added component of the packaging process, helped ensure a stable and cost-effective supply of substrates for our BGA packaging operations and shortened production time.

Testing

Our research and development efforts in the area of testing have focused primarily on improving the efficiency and technology of our testing processes. These efforts include developing software for parallel testing of logic semiconductors, rapid automatic generation and cross-platform conversion of test programs to test logic/mixed-signal semiconductors, automatic code generation for converting and writing testing programs, testing new products using existing machines and providing customers remote access to monitor test results. We are also continuing the development of interface designs to provide for high-frequency testing by minimizing electrical noise. We work closely with our customers in designing and modifying testing software and with equipment vendors to increase the efficiency and reliability of testing equipment. Our research and development operations also include a mechanical engineering group, which currently designs handler kits for semiconductor testing and wafer probing, as well as software to optimize capacity utilization.

OFF-BALANCE SHEET ARRANGEMENTS

We and ASE Test Taiwan entered into a US\$100.0 million, three-year revolving accounts receivable securitization agreement with a bank in November 2005. The credit line under this facility was increased to US\$200.0 million in June 2006. The agreement was terminated early in December 2007. The agreement served to increase our financing flexibility and to meet working capital requirements. Under the agreement, we and ASE Test Taiwan sold accounts

receivable that met certain eligibility requirements to the bank, which issued securities to third parties backed by the accounts receivable transferred to the bank. The eligibility criteria for the accounts receivable were primarily based on the accounts receivable customers' respective credit ratings. Proceeds received from the bank equaled the net carrying value of the sold accounts receivable, less a deferred purchase price receivable at 20% of such receivables, a guarantee deposit, a program fee and other related expenses. At the time of the sale, we and ASE Test Taiwan lost control over the accounts receivable. After the transfer of the accounts receivable, we and ASE Test Taiwan continued to service, administer and collect the accounts receivable on behalf of the bank. We and ASE Test Taiwan collected on the initial accounts receivable sold and transferred new accounts receivable meeting the eligibility requirements with a similar value to replace the collected accounts receivable. Total accounts receivable sold was NT\$4,608.2 million as of December 31, 2006. Losses from sales of account receivables were NT\$13.4 million, NT\$235.5 million and NT\$151.7 million (US\$4.7 million) in 2005, 2006 and 2007, respectively.

Table of Contents

We and ASE Test Taiwan de-recognized accounts receivable at 80% of the carrying value, representing the portion of the sold accounts receivable on which we and ASE Test Taiwan lost control at the time of transfer to the bank. If we or ASE Test Taiwan maintained any control over these sold accounts receivable after the initial sale, the sale of these accounts receivable would no longer qualify as an off-balance sheet transaction and the total proceeds receivable from the bank would have to be recorded as borrowings in our consolidated financial statements. See notes 2 and 7 to our consolidated financial statements included in this annual report.

TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS

The following table sets forth the maturity of our contractual obligations as of December 31, 2007.

| | Total NT\$ | Payments Due by Period | | | After 5 Years NT\$ |
|------------------------------|---------------|-------------------------|----------------------|----------------------|--------------------------|
| | | Under 1 Year NT\$ | 1 to 3 Years NT\$ | 3 to 5 Years NT\$ | |
| Contractual Obligations: | | | | | |
| Long-term debt(1) | 30,545.5 | 11,148.7 | 18,181.9 | 1,214.9 | — |
| Capital lease obligations(2) | 92.3 | 67.8 | 22.2 | 2.3 | — |
| Operating leases(3) | 1,249.1 | 548.7 | 486.4 | 214.0 | — |
| Purchase obligations(4) | 3,386.8 | 3,386.8 | — | — | — |
| Total(5)(6)(7)(8) | 35,273.7 | 15,152.0 | 18,690.5 | 1,431.2 | — |

- (1) Excludes interest payments.
- (2) Represents our commitments under property leases less imputed interest. These obligations are recorded on our consolidated balance sheets.
- (3) Represents our commitments under leases for land, machinery and equipment such as testers, and office buildings and equipment. See note 26 to our consolidated financial statements included in this annual report.
- (4) Represents unpaid commitments for construction. These commitments are not recorded on our consolidated balance sheets as of December 31, 2007. See note 26 to our consolidated financial statements included in this annual report. Total commitments for construction of buildings were approximately NT\$3,679.0 million (US\$113.4 million), of which NT\$292.2 million (US\$9.0 million) had been paid as of December 31, 2007.
- (5) Excludes payments that vary based upon our net sales or sales volume, such as commissions, service fees and royalty payments for technology license agreements. Royalty expenses in 2007 were approximately NT\$246.8 million (US\$7.6 million). See note 26 to our consolidated financial statements included in this annual report.
- (6) Excludes non-binding commitments to purchase machinery and equipment of approximately NT\$7,489.0 million (US\$230.9 million) as of December 31, 2007, of which NT\$2,052.5 million (US\$63.3 million) had been paid. See note 26 to our consolidated financial statements included in this annual report.
- (7) Excludes our minimum pension funding requirements since such amounts have not been determined. Under defined benefit pension plans, we made pension contributions of approximately NT\$224.7 million in 2006 and NT\$485.2 million (US\$15.0 million) in 2007 and we estimate that we will contribute approximately NT\$163.0 million (US\$5.0 million) in 2008. See “—Operating Results and Trend Information—Critical Accounting Policies and Estimates” and note 17 to our consolidated financial statements included in this annual report.
- (8) We recognized additional long term taxes payable of NT\$18.4 million and accrued interest and penalties of NT\$12.8 million related to uncertain tax positions in the year ended December 31, 2007. At that time, we were unable to make a reasonably reliable estimate of the timing of payments in individual years beyond 12 months due

to uncertainties in the timing of the outcome of the tax audits.

Table of Contents

Item 6. Directors, Senior Management and Employees

DIRECTORS AND SENIOR MANAGEMENT AND BOARD PRACTICES

Directors

Our board of directors is elected by our shareholders in a general meeting at which a quorum, consisting of a majority of all issued and outstanding common shares, is present. The chairman is elected by the board from among the directors. Our seven-member board of directors is responsible for the management of our business.

The term of office for our directors is three years from the date of election. The current board of directors began serving on June 22, 2006. The terms of the current directors expire on June 21, 2009. Directors may serve any number of consecutive terms and may be removed from office at any time by a resolution adopted at a meeting of shareholders. Normally, all board members are elected at the same time, except where the posts of one-third or more of the directors are vacant, at which time a special meeting of shareholders shall be convened to elect directors to fill the vacancies. We and our subsidiaries do not have service contracts with our directors that provide for benefits upon termination of employment.

Our board of directors established an audit committee on July 22, 2005 to satisfy the requirements of Rule 10A-3 under the Exchange Act. The audit committee is appointed by the board of directors and currently consists of Alan Cheng, who is independent under Rule 10A-3 and financially literate with accounting or related financial management expertise. The audit committee has responsibility for, among other things, overseeing the qualifications, independence and performance of our independent auditors and the integrity of our financial statements.

The following table sets forth information regarding all of our directors as of April 30, 2008.

| Name | Position | Director Since | Age | Other Significant Positions Held |
|-----------------------|--|----------------|-----|---|
| Jason C.S. Chang(1) | Director, Chairman and Chief Executive Officer | 1984 | 63 | Chairman of ASE Test; Chairman of ASE Test Taiwan |
| Richard H.P. Chang(1) | Director, Vice Chairman and President | 1984 | 61 | Vice Chairman of ASE Test; Chairman of Universal Scientific |
| Tien Wu(2) | Director and Chief Operating Officer | 2003 | 50 | Chief Executive Officer of ISE Labs |
| Joseph Tung(2) | Director, Chief Financial Officer and Vice President | 1997 | 49 | Supervisor of Universal Scientific; Director of ASE Test |
| Raymond Lo(2) | Director and General Manager, Kaohsiung packaging facility | 2006 | 54 | President of ASE Test |
| Jeffrey Chen(2) | Director and Vice President | 2003 | 44 | Director of ASE Test |
| Alan Cheng | Director | 2005 | 62 | Director of ASE Test |

(1) Jason C.S. Chang and Richard H.P. Chang are brothers.

(2) Representative of ASE Enterprises, a company organized under the laws of Hong Kong, which held 16.8% of our outstanding common shares as of April 30, 2008. All of the outstanding shares of ASE Enterprises are held by a company organized under the laws of the British Virgin Islands in trust for the benefit of the family of our Chairman and Chief Executive Officer, Jason C.S. Chang, who is the sole shareholder and director of that company.

Table of Contents

Supervisors

We currently have five supervisors, each serving a three-year term. The current supervisors began serving on June 22, 2006, and their terms will expire on June 21, 2009. The supervisors' duties and powers include investigation of our business condition, inspection of our corporate records, verification and review of financial statements presented by our board of directors at shareholders' meetings, convening of shareholders' meetings, representing us in negotiations with our directors and notification, when appropriate, to the board of directors to cease acting in contravention of any applicable law or regulation, our Articles of Incorporation or the resolutions of our shareholders' meeting. Each supervisor is elected by our shareholders and cannot concurrently serve as a director, managerial officer or other staff member. The ROC Company Law requires at least one supervisor be appointed at all times, or two supervisors for a company with publicly issued equity shares, and that a supervisor's term of office be no more than three years.

The following table sets forth information regarding all of our supervisors as of April 30, 2008.

| Name | Position | Supervisor Since | Age | Other Significant Positions Held |
|------------------|------------|------------------|-----|---|
| Feng Mei-Jean(1) | Supervisor | 1984 | 53 | Supervisor of J&R Industrial Inc. |
| Samuel Liu(2) | Supervisor | 2005 | 60 | Chief Executive Officer of Universal Scientific |
| Tien-Szu Chen(2) | Supervisor | 2006 | 46 | Director of ASE Test Taiwan |
| John Ho(2) | Supervisor | 1998 | 53 | Director of Universal Scientific |
| Yen-Yi Tseng(2) | Supervisor | 2000 | 66 | Chairman of Hung Ching |

(1) Feng Mei-Jean is the wife of Richard H.P. Chang.

(2) Representative of ASE Test Taiwan.

In accordance with ROC law, each of our directors and supervisors is elected either in his or her capacity as an individual or as an individual representative of a corporation or government. Persons designated to represent corporate or government shareholders as directors are typically nominated by such shareholders at the annual general meeting and may be replaced as representatives by such shareholders at will. Of the current directors and supervisors, four represent ASE Enterprises and four represent ASE Test Taiwan. The remaining directors and supervisors serve in their capacity as individuals.

Executive Officers

The following table sets forth information regarding all of our executive officers as of April 30, 2008.

| Name | Position | Years with the Company | Age |
|--------------------|--|------------------------|-----|
| Jason C.S. Chang | Chairman and Chief Executive Officer | 24 | 63 |
| Richard H.P. Chang | Vice Chairman and President | 24 | 61 |
| Tien Wu | Chief Operating Officer; Chief Executive Officer, ISE Labs | 8 | 50 |
| Joseph Tung | Chief Financial Officer and Vice President | 13 | 49 |
| Raymond Lo | President, ASE Test; President, ASE Test Taiwan; General Manager, Kaohsiung packaging facility | 22 | 54 |
| Sang Jin Maeng | President, ASE Korea | 9 | 56 |
| Kwai Mun Lee | President, ASE South-East Asia operations | 10 | 45 |

Table of Contents

Biographies of Directors, Supervisors and Executive Officers

Jason C.S. Chang has served as Chairman of ASE Inc. since its founding in March 1984 and as its Chief Executive Officer since May 2003. Mr. Chang is also the Chairman of ASE Test. He holds a degree in electrical engineering from National Taiwan University and a master's degree from the Illinois Institute of Technology. He is the brother of Richard H.P. Chang, our Vice Chairman and President.

Richard H.P. Chang has served as Vice Chairman of ASE Inc. since November 1999 after having served as President of ASE Inc. since its founding in March 1984, and served as Chief Executive Officer of ASE Inc. from July 2000 to April 2003. In February 2003, he was again appointed President of ASE Inc. upon the retirement of Mr. Leonard Y. Liu. Mr. Chang is also the Vice Chairman of ASE Test. He holds a degree in industrial engineering from Chung Yuan Christian University of Taiwan. He is the brother of Jason C.S. Chang, our Chairman and Chief Executive Officer.

Tien Wu has served as a director of ASE Inc. since June 2003 and Chief Operating Officer since April 2006, prior to which he served as the President of Worldwide Marketing and Strategy of the ASE Group. Mr. Wu has also served as the Chief Executive Officer of ISE Labs since March 2003. Prior to joining ASE Inc. in March 2000, Mr. Wu held various managerial positions with IBM. He holds a B.S.C.E. degree from the National Taiwan University, a M.S. degree in mechanical engineering and a Ph.D. in applied mechanics from the University of Pennsylvania.

Joseph Tung has served as a director of ASE Inc. since April 1997 and Chief Financial Officer since December 1994. He is also a director of ASE Test. Before joining ASE Inc., Mr. Tung was a Vice President at Citibank, N.A. He received a degree in economics from the National Chengchi University of Taiwan and a master's degree in business administration from the University of Southern California.

Raymond Lo has served as a director of ASE Inc. and General Manager of our packaging facility in Kaohsiung, Taiwan since April 2006. Mr. Lo has also served as President of ASE Test since April 2004, prior to which he served as President of ASE Test Taiwan since 1999 and Vice President of Operations of ASE Inc. since July 1993. Mr. Lo also served as a supervisor of ASE Inc. between July 2000 and April 2006. Before joining ASE Inc., Mr. Lo was the Director of Quality Assurance at Zeny Electronics Co. He holds a degree in electronic physics from the National Chiao-Tung University of Taiwan.

Jeffrey Chen has served as a director of ASE Inc. since June 2003 and a director of ASE Test since 1998. He is also a Vice President of ASE Inc. He was the Chief Financial Officer of ASE Test from July 1998 to August 2002. Prior to joining the ASE Group, he worked in the corporate banking department of Citibank, N.A. in Taipei and as a Vice President of corporate finance at Bankers Trust in Taipei. He holds a degree in finance and economics from Simon Fraser University in Canada and a master's degree in business administration from the University of British Columbia in Canada.

Alan Cheng has served as a director of ASE Inc. since June 2005 and is the Chairman of H.R. Silvine Electronics, Inc. as well as a director of ASE Test and Hung Ching Development & Construction Co., Ltd., an affiliate of ours. Mr. Cheng holds a degree in industrial engineering from Chung Yuan Christian University in Taiwan and a master's degree in industrial engineering from Rhode Island University.

Feng Mei-Jean has served as a supervisor of ASE Inc. since March 1984. She holds a degree in economics from National Taiwan University. She is the wife of Richard H.P. Chang, our Vice Chairman and President.

Samuel Liu has served as a supervisor of ASE Inc. since May 2005. He is currently the Chief Executive Officer for Universal Scientific Industrial, Inc., an affiliated company of ASE Inc. Mr. Liu has worked in the electronics industry

for over 30 years in various technical and management roles. He holds a B.S.E.E. from National Taiwan University and a Ph.D. in material science from Stanford University.

Tien-Szu Chen has served as a supervisor of ASE Inc. since June 2006 and is the President of Power ASE. Mr. Chen holds a bachelor's degree in industrial engineering from Chung Yuan Christian University in Taiwan.

John Ho has served as a supervisor of ASE Inc. since April 1998. He is also a director of Universal Scientific. He served as Chief Financial Officer of ASE Inc. from 1988 until 1995. He holds a degree in business administration from National Taiwan University and a master's degree in business administration from the University of Iowa.

Table of Contents

Yen-Yi Tseng has served as a supervisor of ASE Inc. since July 2000 and Chairman of Hung Ching since July 2002. Mr. Tseng served as President of Ret-Ser Engineering Agency from 1991 to 1998. He holds a degree in civil engineering from National Taiwan University and a master's degree in system engineering from Asian Institute of Technology in Thailand. He was also a participant in the Program for Management Development at Harvard Business School.

Sang Jin Maeng has served as President of ASE Korea since January 2004, after serving as Senior Vice President of ASE Korea since July 1999. Mr. Maeng was Vice President of Motorola Korea, Limited before joining ASE Korea when we acquired Motorola Korea, Limited. He holds a degree in communication and electronic engineering from the Civil Aviation College of Korea.

Kwai Mun Lee has served as President of our Southeast Asia operations, with responsibility for the operations of our Penang, Malaysia and Singapore manufacturing facilities, since March 2006. Prior to this appointment, he served as General Manager of ASE Singapore Pte. Ltd., formerly ISE Labs Singapore, since May 1998. Before joining the ASE Group, Mr. Lee held senior management positions at Chartered Semiconductor and STATSChipPAC. He started his career as an engineer at Intel. He holds a degree in engineering from the Swinburne Institute of Technology in Australia.

The business address of our directors, supervisors and executive officers is our registered office.

COMPENSATION

In 2007, we paid to our directors, supervisors and executive officers approximately NT\$426.7 million (US\$13.2 million) in cash remuneration and 468,381 shares in stock bonus. In 2007, we granted to our executive officers an aggregate of 20,350,000 of ASE Inc.'s options under the 2007 plan with an exercise price of NT\$30.65, and an aggregate of 13,350,000 of ASE Mauritius's options under the 2007 plan with an exercise price of US\$1.70. In 2007, we accrued pension costs of NT\$42.9 million (US\$1.3 million) for retirement benefits for our management. We did not pay any remuneration in kind to our directors, supervisors or executive officers in 2007. At our annual general meeting held on June 19, 2008, our shareholders approved an amendment to our articles of association setting our independent directors' remuneration at NT\$2.0 million per person per year. We have not provided any loans to or guarantees for the benefit of any of our directors, supervisors or executive officers. For information regarding our pension and other retirement plans and those of our subsidiaries, see note 17 to our consolidated financial statements included in this annual report.

ASE Inc. Employee Bonus and Stock Option Plans

We award bonuses to employees of ASE Inc. and its subsidiaries who are located in Taiwan based on overall income and individual performance targets. These employees are eligible to receive bonuses in the form of our common shares valued at par. Actual amounts of bonuses to individual employees are determined based upon the employee meeting specified individual performance objectives. In 2005, we granted an aggregate of 25,567,460 common shares as stock bonuses with an aggregate value of NT\$255.7 million. At our annual shareholders' meeting held on June 30, 2005, our shareholders, in addition to approving such stock bonus, also approved NT\$9.5 million as cash bonuses to employees. In 2007, we granted an aggregate of 53,502,850 common shares as stock bonuses with an aggregate value of NT\$535.0 million. At our annual shareholders' meeting held on June 28, 2007, our shareholders, in addition to approving such stock bonus, also approved NT\$535.0 million as cash bonuses to employees. We did not grant any bonuses or stock options in 2006. At our annual shareholders' meeting held on June 19, 2008, our shareholders approved the grant of NT\$383.2 million as cash bonuses to employees and 38,320,500 common shares as stock bonuses. These grants are pending ROC regulatory approval.

We currently maintain three option plans, adopted in 2002, 2004 and 2007. Pursuant to these plans, our full-time employees as well as the full-time employees of our domestic and foreign subsidiaries are eligible to receive stock option grants. Each option entitles the holder to purchase one ASE Inc. common share at a price equal to the closing market price on the date of the option issuance, such exercise price being subject to retroactive adjustment in the event of certain capital transactions in subsequent periods. Each option is exercisable upon vesting for five years. Forty percent of the options originally granted vest upon the second anniversary of the grant date, and an additional 10% of the options originally granted vest every six months thereafter. Each option expires at the end of the 10th year following its grant date. The options are generally not transferable. As of December 31, 2007, a total of 159,968,000 options had been granted under the 2002 plan, 145,989,000 of which had an original exercise price of NT\$20.80 per share (currently adjusted to NT\$12.40 per share) and 13,979,000 of which had an original exercise price of NT\$24.60 per share (currently adjusted to NT\$16.60 per share). As of December 31, 2007, a total of 139,917,000 options had been granted under the 2004 plan, 124,917,000 of which had an original exercise price of NT\$26.60 per share (currently adjusted to NT\$19.60 per share) and 15,000,000 of which had an original exercise price of NT\$20.55 per share (currently adjusted to NT\$16.00 per share). As of December 31, 2007, a total of 185,806,000 options had been granted under the 2007 plan. The original and current exercise price under the 2007 plan is NT\$30.65 per share.

Table of Contents

ASE Test Share Option Plans

As of December 31, 2007, ASE Test maintained three option plans, which included plans adopted in 1999, 2000 and 2004. Under ASE Test's share option plans, ASE Test's directors, employees, advisors, consultants and affiliates, some of whom serve as our directors, supervisors and employees, could, at the discretion of a committee of its directors administering the plan, be granted options to purchase its ordinary shares at an exercise price of no less than their market value on the date of grant. As of December 31, 2007, an aggregate of 16,500,000 of ASE Test's shares had been reserved for issuance and 8,723,172 options to purchase its shares remained outstanding under its various option plans. An aggregate of 4,985,000 options (of which 4,910,000 were outstanding as of December 31, 2007) had been granted to the directors and executive officers of ASE Test. Options granted under the various plans were exercisable at exercise prices ranging from US\$6.10 to US\$25.00 per share.

On May 30, 2008, we acquired, by way of a scheme of arrangement under Singapore law, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own, making ASE Test our wholly-owned subsidiary. Upon the effectiveness of this transaction on May 30, 2008, each ASE Test option exercisable for ASE Test ordinary shares (whether or not vested) that had a per share exercise price lower than US\$14.78 was deemed to have been exercised by ASE Test on behalf of the option holder on a cashless basis. We then acquired these newly issued ASE Test ordinary shares for US\$14.78 per share in cash. As a result, each of these option holders received a cash payment per share equal to the excess of US\$14.78 over the per share exercise price of their options, less any interest, fees and charges. Each ASE Test option that had a per share exercise price equal to or higher than US\$14.78 was cancelled without any payment to the option holder. See "Item 4. Information on the Company—History and Development of the Company—ASE Test Share Acquisition and Privatization."

ASE Mauritius Inc. Share Option Plans

As of December 31, 2007, ASE Mauritius Inc. maintained one option plan adopted in 2007. Under this plan, certain employees of ASE Mauritius Inc. and the ASE Group are granted options to purchase ordinary shares of ASE Mauritius Inc. at an exercise price of US\$1.70, which exercise price was determined by taking into account a fairness opinion rendered by an independent appraiser and was reviewed by our accountants. Each option is exercisable upon vesting for five years and expires after 10 years. As of December 31, 2007, a total of 30,000,000 options had been granted under this plan with an exercise price of US\$1.70.

EMPLOYEES

The following table sets forth, for the periods indicated, certain information concerning our employees for the dates indicated.

| | As of December 31, | | |
|---------------------------------|--------------------|--------|--------|
| | 2005 | 2006 | 2007 |
| Total | 29,039 | 26,986 | 29,942 |

Table of Contents

Eligible employees may participate in our employee share bonus plan and stock option plans and ASE Mauritius Inc's share option plans. See “—Compensation—ASE Inc. Employee Bonus and Stock Option Plans” and “—Compensation—ASE Mauritius Inc. Share Option Plans.” See also note 19 to our consolidated financial statements included in this annual report.

With the exception of ASE Korea's employees, our employees are not covered by any collective bargaining arrangements. We believe that our relationship with our employees is good.

SHARE OWNERSHIP

The following table sets forth certain information with respect to our common shares and options exercisable for our common shares held by our directors, supervisors and executive officers as of April 30, 2008.

| Director, Supervisor or Executive Officer | Number of ASE Inc. Common Shares Held | Percentage of Total ASE Inc. Common Shares Issued and Outstanding | Number of Options Held(1) | Exercise Price of Options (NT\$) | Expiration Date of Options |
|--|--|---|---------------------------------|-------------------------------------|-------------------------------|
| Jason C.S. Chang | 55,411,981 ⁽²⁾ | 1.01% | 11,180,000 | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Richard H.P. Chang | 71,314,948 | 1.30% | 6,770,000 | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Tien Wu | 1,351,214 | 0.02% | * | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Joseph Tung | 2,387,327 | 0.04% | * | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Raymond Lo | 1,114,220 | 0.02% | | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Jeffrey Chen | 755,717 | 0.01% | * | 16.60–30.65 | 08/22/2013–12/19/2017 |
| Alan Cheng | 439,772 | 0.01% | * | 30.65 | 12/19/2017 |
| Feng Mei-Jean | 84,677,683 | 1.55% | 200,000 | 30.65 | 12/19/2017 |

| Tien-Szu Chen | 230,634 | 0.00% | * | 12.40–30.65 | 12/24/2012–12/19/2017 |
| John Ho | 1,225,005 | 0.02% | * | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Yen-Yi Tseng | 303,740 | 0.01% | * | 19.60–30.65 | 06/30/2014–12/19/2017 |
| Sang Jin Maeng | 0 | 0.00% | * | 12.40–30.65 | 12/24/2012–12/19/2017 |
| Kwai Mun Lee | 0 | 0.00% | * | 16.60–30.65 | 08/22/2013–12/19/2017 |

(1) Each option covers one of our common shares.

(2) In addition to holding 1.01% of our common shares directly, Jason C.S. Chang is the sole shareholder and director of a company that holds all the outstanding shares of ASE Enterprises, which holds 16.8% of our common shares. See “Item 7. Major Shareholders and Related Party Transactions—Major Shareholders.”

*The sum of the number of common shares held and the number of common shares issuable upon exercise of all options held is less than 1% of our total outstanding common shares.

Table of Contents

Item 7. Major Shareholders and Related Party Transactions

MAJOR SHAREHOLDERS

The following table sets forth information known to us with respect to the beneficial ownership of our common shares, as of April 30, 2008, by each shareholder known by us to beneficially own more than 5% of our outstanding common shares and all directors, supervisors and executive officers as a group.

| Name of Shareholder or Group | Common Shares Beneficially Owned | |
|---|----------------------------------|------------|
| | Number | Percentage |
| ASE Enterprises(1) | 922,787,725 | 16.8% |
| Directors, supervisors and executive officers as a group(2) | 1,142,066,324 | 20.9% |

(1) ASE Enterprises is a company organized under the laws of Hong Kong. All of the outstanding shares of ASE Enterprises are held by a company organized under the laws of the British Virgin Islands in trust for the benefit of the family of our Chairman and Chief Executive Officer, Jason C.S. Chang, who is the sole shareholder and director of that company.

(2) Includes shareholding of ASE Enterprises.

The following table sets forth information relating to our common shares held by our consolidated subsidiaries and unconsolidated affiliates as of May 30, 2008.

| Name of Shareholder | Common Shares Beneficially Owned | |
|------------------------|----------------------------------|------------|
| | Number | Percentage |
| ASE Test Taiwan(1) | 958,495 | 0.02% |
| Hung Ching(2) | 59,508,486 | 1.1% |
| J&R Holding Limited(3) | 106,684,153 | 1.9% |

(1) ASE Test Taiwan is a 99.99%-owned subsidiary of ASE Test, our wholly-owned subsidiary as of May 30, 2008.

(2) As of May 30, 2008, we held 26.2% of the outstanding shares of Hung Ching. Chang Yao Hung-ying, who was our director from 1984 to June 2003, our Chairman and Chief Executive Officer, Jason C.S. Chang, our Vice Chairman and President, Richard H.P. Chang, and other members of the Chang family are controlling shareholders of Hung Ching. See “Item 4. Information on the Company—Organizational Structure—Our Unconsolidated Affiliates.”

(3) J&R Holding Limited is our wholly-owned subsidiary. J&R Holding Limited’s ownership of our common shares is the result of the merger of ASE Chung Li with and into us in August 2004 and subsequent dividends upon shares received in connection with this merger.

In connection with the merger of ASE Chung Li and ASE Material with and into ASE Inc. in August 2004, we and ASE Test have established a trust to hold and dispose of 149,175,000 and 5,000,000 of our common shares that were issued to ASE Test and ASE Test Taiwan, respectively, upon completion of the merger. As a result, the trustee appointed under the trust agreement has become one of our shareholders until such common shares are sold as permitted under the rules and regulations of the Taiwan Stock Exchange and the terms and conditions of the trust agreement. As of April 30, 2008, as a result of stock dividends, the total amount of our common shares held by the trust was 205,821,048. See “—Related Party Transactions.”

None of our major shareholders has voting rights different from those of our other shareholders.

Other than:

- FMR Corp. becoming the beneficial owners of more than 5% of our outstanding common shares in 2005, and ceasing to be the beneficial owner of more than 5% of our outstanding common shares in 2006;
- Capital Group International, Inc. and Capital International, Inc. ceasing to be beneficial owners of more than 5% of our outstanding common shares in 2005; and
- the receipt by J&R Holding Limited, our wholly-owned subsidiary, of 106,684,153 of our outstanding shares in connection with the merger of ASE Chung Li with and into ASE Inc. in August 2004 and subsequent dividends.

69

Table of Contents

there were no changes in our major shareholders or significant changes in the percentage ownership of any of our major shareholders in 2005, 2006 and 2007.

As of May 30, 2008, a total of 5,476,949,209 common shares were outstanding. With certain limited exceptions, holders of common shares that are not ROC persons are required to hold their common shares through a brokerage account in the ROC. As of May 30, 2008, 203,367,765 common shares were registered in the name of a nominee of Citibank, N.A., the depository under our ADS deposit agreement. Citibank, N.A., has advised us that, as of May 30, 2008, 40,669,917 ADSs, representing 203,349,585 common shares, were held of record by Cede & Co., and 3,636 ADSs, representing 18,180 common shares, were held by seven other U.S. persons. The remaining 22 common shares held by Citibank, N.A. are a result of fractional shares distributed during stock distributions on the common shares underlying the ADSs. We have no further information as to common shares held, or beneficially owned, by U.S. persons.

RELATED PARTY TRANSACTIONS

In recent years, we have awarded our common shares to the employees of our subsidiaries as part of their compensation, based in part on our consolidated net income and the subsidiaries' contribution to the consolidated income. We expect this practice to continue in the future. Because we recorded a consolidated net loss in 2005, we did not award any common shares to the employees of subsidiaries in 2006.

In order to comply with Singapore law, trusts organized under ROC law have been established to hold and dispose of our common shares issued to ASE Test and ASE Test Taiwan in connection with the merger of ASE Chung Li and ASE Material into our company in August 2004. As of May 30, 2008, these trusts held 199,146,132 of our common shares issued to ASE Test and 6,674,916 of our common shares issued to ASE Test Taiwan. Under Section 76(1)(b)(ii) of the Companies Act, Chapter 50, of Singapore, ASE Test, a Singapore company, may not purport to acquire, directly or indirectly, shares or units of shares in our company, ASE Test's parent company. Pursuant to the applicable trust agreements, the trustee under each trust is (1) the registered owner of the common shares, (2) authorized to exercise all of the rights as a shareholder of the common shares, (3) authorized to sell the common shares, subject to market conditions, when such common shares become available for resale under ROC law and in accordance with volume limitations under ROC law, at its sole discretion; provided such common shares are sold (i) in compliance with ROC laws and regulations, (ii) in an orderly manner in order to minimize the impact on the trading price of the common shares, and (iii) in a manner consistent with its fiduciary duties owed to ASE Test and (4) able to transfer and deliver to ASE Test or ASE Test Taiwan the proceeds from the sale of our common shares and any cash dividends distributed, as the case may be. Neither ASE Test nor ASE Test Taiwan have any rights with respect to the common shares held in trust pursuant to the applicable trust agreements other than the right to receive the proceeds from the sale of such common shares and cash dividends declared while the shares remain in trust.

On May 30, 2008, we acquired, by way of a scheme of arrangement under Singapore law, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own, making ASE Test our wholly-owned subsidiary. See "Item 4. Information on the Company—History and Development of the Company—ASE Test Share Acquisition and Privatization."

We have historically guaranteed the promissory notes of many of our subsidiaries. As of December 31, 2007, we had endorsed and guaranteed an aggregate amount of NT\$7,273.7 million (US\$224.2 million) of the outstanding promissory notes of our subsidiaries.

We constructed a new building in Kaohsiung, Taiwan with Hung Ching, our affiliate engaged in the development and management of commercial, residential and industrial real estate in Taiwan. The new building was completed in July 2004 and has approximately 1,172,000 square feet of floor space. We and ASE Test Taiwan purchased Hung Ching's

interest in the development in January 2005. We own the first eight floors of the building with floor space of approximately 940,000 square feet and ASE Test Taiwan owns the remaining two floors with floor space of approximately 232,000 square feet. We use our floor space to house part of our operations in Kaohsiung. The total cost to us of the construction project was approximately NT\$1,329.2 million.

Table of Contents

On May 23, 2006, we purchased from Hung Ching two new buildings in Chung Li, Taiwan that we built with Hung Ching for NT\$1,311.4 million. These buildings have a floor space of approximately 1,313,000 square feet and house part of our testing, packaging and interconnect materials operations. On December 19, 2007, we purchased from Hung Ching an additional building in Chung Li, Taiwan for NT\$141.2 million (US\$4.4 million). This building houses power generation and other ancillary support equipment.

Item 8. Financial Information

CONSOLIDATED STATEMENTS AND OTHER FINANCIAL INFORMATION

Consolidated financial statements are set forth under “Item 18. Financial Statements.”

LEGAL PROCEEDINGS

On January 31, 2006, Tessera, Inc. filed an amended complaint in the United States District Court for the Northern District of California adding Advanced Semiconductor Engineering, Inc. and ASE (U.S.) Inc., collectively referred to as ASE, and other companies to a suit alleging that ASE’s and the thirteen other defendants’ manufacturing, use, importation, offer for sale, and sale of various packaged semiconductor products infringed patents owned by Tessera relating to certain types of semiconductor chip packaging, and/or breached technology license agreements regarding certain types of semiconductor chip packages between Tessera and certain defendants, including ASE. Tessera sought, among other things, monetary damages and injunctive relief in the lawsuit. On March 27, 2006, ASE filed its answer and counterclaims with the court.

On May 15, 2007, at Tessera’s request, the United States International Trade Commission, or ITC, instituted an investigation of certain of ASE’s co-defendants and other companies, including certain of ASE’s customers, but not ASE and the other contract chip packagers that were included as defendants in the California case. In the ITC investigation, Tessera seeks an order preventing these companies from importing into the United States certain packaged semiconductor chips and products containing those chips. The ITC investigation involves two of the same patents asserted in the California case and may involve some of the same products packaged by ASE that are included in the California case. The district court in the California case has vacated the trial schedule and stayed all proceedings until a final resolution is reached in the ITC investigation. The United States Patent and Trademark Office has also instituted reexamination proceedings on all the patents Tessera has asserted in the California case and the ITC investigation. The ITC investigation was scheduled to begin in February 2008, but the administrative law judge presiding over the investigation agreed to stay the investigation until conclusion of the reexamination proceedings. Tessera appealed the administrative law judge’s ruling to the full Commission, which reversed the stay and ordered the administrative law judge to continue the hearing. In May 2008, the administrative law judge re-set the hearing date for the ITC investigation to July 2008.

After initiating this ITC investigation, Tessera indicated that it desired to include ASE and the other contract chip packagers from the California case in a new ITC investigation. These other contract chip packagers challenged whether Tessera could initiate an ITC investigation against them because of the license agreements between each of them and Tessera, which require that litigation take place only in California. Tessera obtained approval from the California court to bring a new ITC investigation against the other contract chip packagers after Tessera agreed to limit such investigation to packages outside the scope of the licenses of the contract chip packagers. On April 21, 2008, Tessera filed its ITC complaint against the contract chip packagers, and on May 21, 2008, the ITC instituted a

new investigation against them. In addition to Advanced Semiconductor Engineering, Inc. and ASE (U.S.) Inc., the complaint names ASE Test Ltd. as a respondent. In addition to the two patents asserted in the original ITC investigation, the new ITC investigation includes one additional patent, which is also asserted in the California case. In the new ITC investigation, Tessera seeks an order excluding from importation into the U.S. all of the respondents' "small-format," non-tape BGA packages that infringe one or more claims of the asserted patents, and downstream products containing such packages. In addition, Tessera seeks a general exclusion order excluding from importation all small format, non-tape BGA packages (and downstream products containing such packages), regardless of whether such packages are assembled by the respondents. No schedule has yet been set for the new ITC investigation, and the ASE respondents have not yet responded to the complaint. Thus far, the United States Patent and Trade Office has found that all of the claims asserted by Tessera in the new ITC investigation are not patentable, but the reexamination proceedings have not yet concluded.

Table of Contents

It is not possible to predict the outcome of the California litigation, the ITC investigations, the reexamination proceedings, the total costs of resolving these disputes, or when the stay of the California case will be lifted.

DIVIDENDS AND DIVIDEND POLICY

We have historically paid dividends on our common shares with respect to the results of the preceding year following approval by our shareholders at the annual general meeting of shareholders. We have historically paid the large majority of our dividends in the form of stock. We have paid annual stock dividends on our common shares since 1989, except in 2002 and 2006 when we did not pay any dividend due to the losses we incurred in the 2001 and 2005 fiscal years, respectively. We also paid cash dividends of NT\$0.10 per share in 2005 and NT\$1.48 per share in 2007. At our annual general meeting of shareholders held on June 19, 2008, our shareholders approved the distribution of NT\$9.4 billion as cash dividends and 158.8 million common shares as stock dividends. These distributions are pending ROC regulatory approval.

The following table sets forth the stock dividends paid during each of the years indicated and related information.

| | Stock Dividends Per Common Shares(1) NT\$ | Total Common Shares Issued as Stock Dividends | Outstanding Common Shares on Record Date(2) | Percentage of Outstanding Common Shares Represented by Stock Dividends |
|------|--|---|---|--|
| 1997 | 3.80 | 277,020,000 | 729,000,000 | 38.0% |
| 1998 | 7.20 | 732,240,000 | 1,017,000,000 | 72.0% |
| 1999 | 1.07 | 190,460,000 | 1,780,000,000 | 10.7% |
| 2000 | 3.15 | 623,811,852 | 1,980,355,086 | 31.5% |
| 2001 | 1.70 | 467,840,000 | 2,752,000,000 | 17.0% |
| 2002 | — | — | 3,254,800,000 | — |
| 2003 | 1.00 | 325,480,000 | 3,254,800,000 | 10.0% |
| 2004 | 0.57 | 221,977,360 | 3,862,595,437 | 5.7% |
| 2005 | 1.00 | 411,221,140 | 4,113,744,200 | 10.0% |
| 2006 | — | — | 4,592,508,620 | — |
| 2007 | 1.48 | 694,101,071 | 4,645,295,431 | 14.9% |

(1) Holders of common shares receive as a stock dividend the number of common shares equal to the NT dollar value per common share of the dividend declared multiplied by the number of common shares owned and divided by the par value of NT\$10 per share. Fractional shares are not issued but are paid in cash.

(2) Aggregate number of common shares outstanding on the record date applicable to the dividend payment. Includes common shares issued in the previous year under our employee bonus plan.

In order to meet the needs of our present and future capital expenditures, we anticipate paying both stock and cash dividends in the future. The form, frequency and amount of future cash or stock dividends on our common shares will depend upon our net income, cash flow, financial condition and other factors. While we have a general policy of distributing cash dividends ranging from 0% to 50% of a total dividend distribution, our Articles of Incorporation allow us to distribute cash dividends in excess of 50% of a dividend distribution subject to shareholder approval and

other factors such as economic conditions, developments in our operations and our cash position. See “Item 10. Additional information—Articles of Incorporation—Dividends and Distributions.”

In general, we are not permitted to distribute dividends or make other distributions to shareholders for any year where we did not record net income or retained earnings (excluding reserves). The ROC Company Law also requires that 10% of annual net income (less prior years’ losses and taxes payable, if any) be set aside as a legal reserve until the accumulated legal reserve equals our paid-in capital. In addition, our Articles of Incorporation require that before a dividend is paid pro rata out of our annual net income:

- up to 2% of our annual net income (less prior years’ losses, taxes payable and legal and special reserves, if any) should be paid to our directors and supervisors as compensation; and

Table of Contents

- between 7% and 10% of the annual net income (less prior years' losses, taxes payable and legal and special reserves, if any) should be paid to our employees as bonuses; the 7% portion is to be distributed to all employees in accordance with our employee bonus distribution rules, while any portion exceeding 7% is to be distributed in accordance with rules established by our board of directors to individual employees who have been recognized as having made special contributions to our company. Such employees include those of our affiliated companies who meet the criteria set by our board of directors.
- Holders of ADSs will be entitled to receive dividends, subject to the terms of the deposit agreement, to the same extent as the holders of the common shares. Cash dividends will be paid to the depository in NT dollars and, except as otherwise provided in the deposit agreement, will be converted by the depository into U.S. dollars and paid to holders of ADSs according to the terms of the deposit agreement. Stock dividends will be distributed to the depository and, except as otherwise provided in the deposit agreement, will be distributed by the depository, in the form of additional ADSs, to holders of ADSs according to the terms of the deposit agreement.

Holders of outstanding common shares on a dividend record date will be entitled to the full dividend declared without regard to any prior or subsequent transfer of common shares. Accordingly, holders of outstanding ADSs on the relevant dividend record date will, subject to the terms of the deposit agreement, be similarly entitled to the full amount of any dividend declared.

For information relating to ROC withholding taxes payable on dividends, see "Item 10. Additional Information—Taxation—ROC Taxation—Dividends."

SIGNIFICANT CHANGES

Other than as disclosed elsewhere in this annual report, we have not experienced any significant changes since the date of the annual financial statements.

Item 9. The Offer and Listing

OFFER AND LISTING DETAILS

Our common shares were first issued in March 1984 and have been listed on the Taiwan Stock Exchange since July 1989. The Taiwan Stock Exchange is an auction market where the securities traded are priced according to supply and demand through announced bid and ask prices. As of May 30, 2008, there were an aggregate of 5,476,949,209 of our common shares outstanding. The following table sets forth, for the periods indicated, the high and low closing prices and the average daily volume of trading activity on the Taiwan Stock Exchange for the common shares and the high and low of the daily closing values of the Taiwan Stock Exchange Index. The closing price for our common shares on the Taiwan Stock Exchange on May 30, 2008 was NT\$31.90 per share.

- (1) As adjusted retroactively by the Taiwan Stock Exchange to give effect to stock dividends paid in the periods indicated. See “Item 8. Financial Information—Dividends and Dividend Policy.”

The performance of the Taiwan Stock Exchange has in recent years been characterized by extreme price volatility. There are currently limits on the range of daily price movements on the Taiwan Stock Exchange. In the case of equity securities traded on the Taiwan Stock Exchange, such as our common shares, fluctuations in the price of a particular security may not exceed a 7% change either above or below the previous day’s closing price of such security.

Our ADSs have been listed on the New York Stock Exchange under the symbol “ASX” since September 26, 2000. The outstanding ADSs are identified by the CUSIP number 00756M404. As of May 30, 2008, a total of 40,669,917 ADSs were outstanding. The following table sets forth, for the periods indicated, the high and low closing prices and the average daily volume of trading activity on the New York Stock Exchange for our ADSs and the highest and lowest of the daily closing values of the New York Stock Exchange Index. The closing price for our ADSs on the New York Stock Exchange on May 30, 2008 was US\$5.25 per ADS.

ARTICLES OF INCORPORATION

General

We are a company limited by shares organized under the laws of the ROC. Our organizational document is our Articles of Incorporation. We have no by-laws.

Our Articles of Incorporation provide, in Article 2, that we may engage in the following types of business:

- the manufacture, assembly, processing, testing and export of various types of integrated circuitry;
- the research, development, design and manufacture, assembly, processing, testing and export of various computers, electronics, communications, information products and their peripheral products;
 - general import and export trading (excluding businesses that require trading permits);
 - the manufacture of electronic parts and components;
- the manufacture of mechanical and electronic devices and materials (including integrated circuit leadframes, BGA substrates and flip-chip substrates);

Table of Contents

- wholesale and retail sales of electronic materials;
- technical support and consulting service for integrated circuit leadframes, BGA substrates and flip-chip substrates;
- leasing; and
- except any business requiring a special permit, any business not prohibited or restricted by law or regulation.

We were incorporated on March 23, 1984 as a company limited by shares under the ROC Company Law. Our authorized capital was NT\$80,000,000,000, divided into 8,000,000,000 common shares, 5,476,949,209 of which were issued in registered form and outstanding as of May 30, 2008. We do not have any equity in the form of preference shares or otherwise outstanding as of the date of this annual report.

With the approval of our board of directors and the ROC Financial Supervisory Commission, Executive Yuan, we may grant stock options to our employees, provided that NT\$8,000,000,000 of our authorized capital is reserved for employee stock options and that the shares to be issued under any option plan shall not exceed 10% of our outstanding common shares and the total number of shares to be issued under all option plans shall not exceed 15% of our outstanding common shares. The exercise price of an option shall not be less than the closing price of our common shares on the Taiwan Stock Exchange on the grant date of the option. As of December 31, 2007, we had granted 485,691,000 options pursuant to employee stock option plans established on August 28, 2002, May 27, 2004 and November 22, 2007 to our full-time employees as well as to full-time employees of our domestic and foreign subsidiaries. See “Item 6. Directors, Senior Management and Employees—Compensation—ASE Inc. Employee Bonus and Stock Option Plans.” We have 800,000,000 common shares reserved for issuance under our employee stock option plans.

Directors

Our Articles of Incorporation provide that we are to have from seven to nine directors with tenures of three years who are elected at a shareholders’ meeting. With effect from our 2009 annual general meeting of shareholders, two of our directors will be required to be independent directors. There is no minimum amount of shares necessary to stand for election to a directorship. Many of our directors are representatives appointed by corporate shareholders which appoint individual representatives. Re-elections are allowed. The directors have certain powers and duties, including devising operations strategy, proposing to distribute dividends or make up losses, proposing to increase or decrease capital, reviewing material internal rules and contracts, hiring and discharging the general manager, establishing and dissolving branch offices, reviewing budgets and audited financial statements and other duties and powers granted by or in accordance with the ROC Company Law, our Articles of Incorporation or shareholders resolutions.

The board of directors is constituted by the directors, who elect a chairman from among the directors to preside over the meeting of the board. Meetings of the board may be held in the ROC or by teleconference. A director may appoint another director to attend a meeting and vote by proxy, but a director may accept only one proxy.

Dividends and Distributions

In general, we are not permitted to distribute dividends or make other distributions to shareholders in any year in which we did not record net income or retained earnings (excluding reserves). The ROC Company Law also requires that 10% of annual net income (less prior years’ losses and taxes payable, if any) be set aside as a legal reserve until the accumulated legal reserve equals our paid-in capital. In addition, our Articles of Incorporation require that before a dividend is paid out of our annual net income:

- up to 2% of our annual net income (less prior years' losses, taxes payable and legal and special reserves, if any) should be paid to our directors and supervisors as compensation; and
- between 7% and 10% of the annual net income (less prior years' losses, taxes payable and legal and special reserves, if any) should be paid to our employees as bonuses. The 7% portion is to be distributed to all employees in accordance with our employee bonus distribution rules, while any portion exceeding 7% is to be distributed in accordance with rules established by our board of directors to individual employees who have been recognized as having made special contributions to our company. Such employees include those of our affiliated companies who meet the criteria set by our board of directors.

Table of Contents

At the annual general shareholders' meeting, our board of directors submits to the shareholders for their approval any proposal for the distribution of dividends or the making of any other distribution to shareholders from our net income for the preceding fiscal year. All common shares outstanding and fully paid as of the relevant record date are entitled to share equally in any dividend or other distribution so approved. Dividends may be distributed in cash, in the form of common shares or a combination of the two, as determined by the shareholders at the meeting. While we have a general policy of distributing cash dividends ranging from 0% to 50% of a total dividend distribution, our Articles of Incorporation allow us to distribute cash dividends in excess of 50% of a dividend distribution subject to shareholder approval and other factors such as economic conditions, developments in our operations and our cash position. See "Item 8. Financial Information—Dividends and Dividend Policy."

We are also permitted to make distributions to our shareholders of additional common shares by capitalizing reserves. However, the capitalized portion payable out of our legal reserve is limited to 50% of the total accumulated legal reserve and the capitalization can only be effected when the accumulated legal reserve exceeds 50% of our paid-in capital.

For information on the dividends we paid in recent years, see "Item 8. Financial Information—Dividends and Dividend Policy." For information as to ROC taxes on dividends and distributions, see "—Taxation—ROC Taxation—Dividends."

Changes in Share Capital

Under ROC Company Law, any change in the authorized share capital of a company limited by shares requires an amendment to its Articles of Incorporation. In the case of a public company such as ourselves, the approval of the ROC Financial Supervisory Commission, Executive Yuan and the ROC Ministry of Economic Affairs is also required. Authorized but unissued common shares may be issued, subject to applicable ROC law, upon terms as our board of directors may determine.

Preemptive Rights

Under the ROC Company Law, when an ROC company issues new shares for cash, existing shareholders who are listed on the shareholders' register as of the record date have preemptive rights to subscribe for the new issue in proportion to their existing shareholdings, while a company's employees, whether or not they are shareholders of the company, have rights to subscribe for 10% to 15% of the new issue. Any new shares that remain unsubscribed at the expiration of the subscription period may be offered by us to the public or privately placed.

In addition, in accordance with the ROC Securities and Exchange Law, a public company that intends to offer new shares for cash must offer to the public at least 10% of the shares to be sold, except under certain circumstances or when exempted by the ROC Financial Supervisory Commission, Executive Yuan. This percentage can be increased by a resolution passed at a shareholders' meeting, which would diminish the number of new shares subject to the preemptive rights of existing shareholders.

These preemptive rights provisions do not apply to offerings of new shares through a private placement approved at a shareholders' meeting.

Meetings of Shareholders

We are required to hold an ordinary meeting of our shareholders within six months following the end of each fiscal year. These meetings are generally held in Kaohsiung, Taiwan. Any shareholder who holds 1% or more of our issued and outstanding shares may submit one written proposal for discussion at our annual shareholders' meeting. Extraordinary shareholders' meetings may be convened by resolution of the board of directors or by the board of

directors upon the written request of any shareholder or shareholders who have held 3% or more of the outstanding common shares for more than one year. Shareholders' meetings may also be convened by a supervisor. Notice in writing of general meetings of shareholders, stating the place, time and purpose, must be dispatched to each shareholder at least 30 days, in the case of ordinary meetings, and 15 days, in the case of extraordinary meetings, before the date set for each meeting. A majority of the holders of all issued and outstanding common shares present at a shareholders' meeting constitutes a quorum for meetings of shareholders.

Table of Contents

Voting Rights

Under the ROC Company Law, shareholders have one vote for each common share held, except that there are no voting rights for those shares held by us or directly or indirectly held by controlled companies or affiliates. Under the ROC Company Law, our directors and supervisors are elected at a shareholders' meeting through cumulative voting, unless the articles of incorporation of a company provide otherwise.

In general, a resolution can be adopted by the holders of at least a majority of the common shares represented at a shareholders' meeting at which the holders of a majority of all issued and outstanding common shares are present. Under ROC Company Law, the approval by at least a majority of the common shares represented at a shareholders' meeting in which a quorum of at least two-thirds of all issued and outstanding common shares are represented is required for major corporate actions, including:

- amendment to the Articles of Incorporation, including increase of authorized share capital and any changes of the rights of different classes of shares;
 - transfer of the company's entire business or assets or substantial part of its business or assets;
- execution, amendment or termination of any contract through which the company leases its entire business to others, or the company appoints others to operate its business or the company operates its business with others on a continuous basis;
- acquisition of the entire business or assets of any other company, which would have a significant impact on the company's operations;
 - distribution of any stock dividend;
 - dissolution, merger or spin-off of the company; and
 - removal of the directors or supervisors.

A shareholder may be represented at an ordinary or extraordinary meeting by proxy if a valid proxy form is delivered to us five days before the commencement of the ordinary or extraordinary shareholders' meeting.

Holders of ADSs do not have the right to exercise voting rights with respect to the underlying common shares, except as described in the deposit agreement.

Other Rights of Shareholders

Under the ROC Company Law, dissenting shareholders are entitled to appraisal rights in certain major corporate actions such as a proposed amalgamation by the company. If agreement with the company cannot be reached, a dissenting shareholder may seek a court order for the company to redeem all of their shares. Shareholders may exercise their appraisal rights by serving written notice on the company prior to the related shareholders' meeting and/or by raising and registering an objection at the shareholders' meeting. In addition to appraisal rights, shareholders have the right to sue for the annulment of any resolution adopted at a shareholders' meeting where the procedures were legally defective within 30 days after the date of the shareholders' meeting. One or more shareholders who have held more than 3% of the issued and outstanding shares of a company for more than one year may require a supervisor to bring a derivative action on behalf of the company against a director as a result of the director's unlawful actions or

failure to act.

78

Table of Contents

Rights of Holders of Deposited Securities

Except as described below, holders of ADSs generally have no right under the deposit agreement to instruct the depository to exercise the voting rights for the common shares represented by the ADSs. Instead, by accepting ADSs or any beneficial interest in ADSs, holders of ADSs are deemed to have authorized and directed the depository to appoint our chairman or his designee to represent them at our shareholders' meetings and to vote the common shares deposited with the custodian according to the terms of the deposit agreement.

The depository will mail to holders of ADSs any notice of shareholders' meeting received from us together with information explaining how to instruct the depository to exercise the voting rights of the securities represented by ADSs.

If we fail to timely provide the depository with an English language translation of our notice of meeting or other materials related to any meeting of owners of common shares, the depository will endeavor to cause all the deposited securities represented by ADSs to be present at the applicable meeting, insofar as practicable and permitted under applicable law, but will not cause those securities to be voted.

If the depository timely receives voting instructions from owners of at least 51.0% of the outstanding ADSs to vote in the same direction regarding one or more resolutions to be proposed at the meeting, including election of directors and supervisors, the depository will notify our chairman or his designee to attend the meeting and vote all the securities represented by the holders' ADSs in accordance with the direction received from owners of at least 51.0% of the outstanding ADSs.

If we have timely provided the depository with the materials described in the deposit agreement and the depository has not timely received instructions from holders of at least 51.0% of the outstanding ADSs to vote in the same direction regarding any resolution to be considered at the meeting, then, holders of ADSs will be deemed to have authorized and directed the depository bank to give a discretionary proxy to our chairman or his designee to attend and vote at the meeting the common shares represented by the ADSs in any manner, our chairman or his designee may wish, which may not be in the interests of holders.

The ability of the depository to carry out voting instructions may be limited by practical and legal limitations and the terms of the securities on deposit. We cannot assure ADS holders that they will receive voting materials in time to enable them to return voting instructions to the depository in a timely manner.

While shareholders who own 1% or more of our outstanding shares are entitled to submit one proposal to be considered at our annual general meetings, only holders representing at least 51% of our ADSs outstanding at the relevant record date are entitled to submit one proposal to be considered at our annual general meetings. Hence, only one proposal may be submitted on behalf of all ADS holders.

Register of Shareholders and Record Dates

Our share registrar, President Securities Corp., maintains our register of shareholders at its offices in Taipei, Taiwan, enters transfers of common shares in our register upon presentation of, among other documents, certificates representing the common shares transferred and acts as paying agent for any dividends or distributions with respect to our common shares. Under the ROC Company Law and our Articles of Incorporation, we may, by giving advance public notice, set a record date and close the register of shareholders for a specified period in order for us to determine the shareholders or pledgees that are entitled to rights pertaining to the common shares. The specified period required is as follows:

- ordinary shareholders' meeting—60 days;
- extraordinary shareholders' meeting—30 days; and
- relevant record date—five days.

Table of Contents

Annual Financial Statements

At least ten days before the annual ordinary shareholders' meeting, our annual financial statements must be available at our principal executive office in Kaohsiung, Taiwan for inspection by the shareholders.

Transfer of Common Shares

The transfer of common shares in registered form is effected by endorsement and delivery of the related share certificates but, in order to assert shareholders' rights against us, the transferee must have his name and address registered on our register of shareholders. Shareholders are required to file their respective specimen seals, also known as chops, with us. Chops are official stamps widely used in Taiwan by individuals and other entities to authenticate the execution of official and commercial documents.

Acquisition of Common Shares by ASE Inc.

Under the ROC Securities and Exchange Law, we may purchase our own common shares for treasury stock in limited circumstances, including:

- to transfer shares to our employees;
- to deliver shares upon the conversion or exercise of bonds with warrants, preferred shares with warrants, convertible notes, convertible preferred shares or warrants issued by us; and
- to maintain our credit and our shareholders' equity, provided that the shares so purchased shall be canceled.

We may purchase our common shares on the Taiwan Stock Exchange or by means of a public tender offer. These transactions require the approval of a majority of our board of directors at a meeting in which at least two-thirds of the directors are in attendance. The total amount of common shares purchased for treasury stock may not exceed 10% of the total outstanding shares. In addition, the total cost of the purchased shares shall not exceed the aggregate amount of our retained earnings, any premium from share issuances and the realized portion of our capital reserve.

We may not pledge or hypothecate any of our shares purchased by us. In addition, we may not exercise any shareholders' right attaching to such shares. In the event that we purchase our shares on the Taiwan Securities Exchange, our affiliates, directors, supervisors, managers, and their respective spouses and minor children and/or nominees are prohibited from selling any of our shares during the period in which we are purchasing our shares.

Pursuant to the amended ROC Company Law, effective from November 14, 2001, our subsidiaries are not permitted to acquire our common shares. This restriction does not affect any acquisition of our common shares made by our subsidiaries prior to November 14, 2001.

Liquidation Rights

In the event of our liquidation, the assets remaining after payment of all debts, liquidation expenses and taxes will be distributed pro rata to the shareholders in accordance with the relevant provisions of the ROC Company Law and our Articles of Incorporation.

Transfer Restrictions

Substantial Shareholders

The ROC Securities and Exchange Law currently requires:

- each director, supervisor, executive officer or substantial shareholder (that is, a shareholder who, together with his or her spouse, minor children or nominees, holds more than 10% of the shares of a public company) to report any change in that person's shareholding to the issuer of the shares and the ROC Financial Supervisory Commission, Executive Yuan; and

80

Table of Contents

- each director, supervisor, executive officer or substantial shareholder, after acquiring the status of director, supervisor, executive officer or substantial shareholder for a period of six months, to report his or her intent to transfer any shares on the Taiwan Stock Exchange to the ROC Financial Supervisory Commission, Executive Yuan at least three days before the intended transfer, unless the number of shares to be transferred is less than 10,000 shares.

In addition, the number of shares that can be sold or transferred on the Taiwan Stock Exchange by any person subject to the restrictions described above on any given day may not exceed:

- 0.2% of the outstanding shares of the company in the case of a company with no more than 30 million outstanding shares; or
- 0.2% of 30 million shares plus 0.1% of the outstanding shares exceeding 30 million shares in the case of a company with more than 30 million outstanding shares; or
- in any case, 5% of the average trading volume (number of shares) on the Taiwan Stock Exchange for the ten consecutive trading days preceding the reporting day on which the director, supervisor, manager or substantial shareholder reports the intended share transfer to the ROC Financial Supervisory Commission, Executive Yuan.

These restrictions do not apply to sales or transfers of our ADSs.

Common Shares Issued to Substantial Shareholders in Connection with a Merger

The rules and regulations of the Taiwan Stock Exchange impose certain transfer restrictions on common shares of a Taiwan Stock Exchange listed company issued to a substantial shareholder (as defined under the ROC Securities and Exchange Law and described under “—Substantial Shareholders”) of an unlisted company to be merged with and into the acquiror. A substantial shareholder of an unlisted company to be merged with and into a Taiwan Stock Exchange listed company is restricted from selling or transferring common shares received in connection with such merger for a period of six months after such shares are listed on the Taiwan Stock Exchange. After the initial six-month lock-up period, such holder is permitted to sell or transfer 50% of its holdings of the common shares received in the merger. After one year from the date of the listing of the common shares, the holder is permitted to sell or transfer all the remaining common shares received in the merger.

MATERIAL CONTRACTS

Joint Venture Agreement by and among Powerchip Semiconductor Corp. and Advanced Semiconductor Engineering, Inc.

On July 14, 2006, we entered into a joint venture agreement with Powerchip Semiconductor Corp. to establish Power ASE to focus on packaging and testing of memory semiconductors. Pursuant to the joint venture agreement, we invested US\$30.0 million for a 60.0% of the equity interest in Power ASE and Powerchip invested US\$20.0 million for the remaining 40.0%.

Sale and Purchase Agreement by and among Seacoast Profits Limited and J&R Holding Limited

On January 11, 2007, we, through our subsidiary J&R Holding Limited, entered into a sale and purchase agreement with Seacoast Profits Limited in connection with the acquisition of all the shares of Top Master Enterprises Limited, the sole shareholder of ASES AT, for a purchase price of US\$60.0 million.

Equity Interests Transfer Agreement by and among NXP B.V., NXP Semiconductors Suzhou Ltd. and J&R Holding Limited

On August 6, 2007, we, through our subsidiary J&R Holding Limited, entered into an equity interests transfer agreement with NXP Semiconductors and NXP Semiconductors Suzhou Ltd. in connection with our establishment of a joint venture with NXP Semiconductors. Pursuant to the equity interests transfer agreement, we acquired 60.0% of the shares of NXP Semiconductors Suzhou Ltd., now known as ASEN, from NXP Semiconductors for a purchase price of US\$21.6 million. NXP Semiconductors retained the remaining 40.0% of the shares.

Table of Contents

Scheme Implementation Agreement between Advanced Semiconductor Engineering, Inc. and ASE Test Limited

On September 4, 2007, we and ASE Test entered into a scheme implementation agreement under which we agreed to acquire, by way of a scheme of arrangement under Singapore law, or the Scheme, all the outstanding ordinary shares of ASE Test that we did not already directly or indirectly own for US\$14.78 in cash for each ASE Test ordinary share and the New Taiwan dollar equivalent of US\$0.185 in cash (based on the prevailing exchange rate) for each ASE Test depositary share. The Scheme became effective on May 30, 2008 and ASE Test became our wholly-owned subsidiary. For additional information on this transaction, see “Item 4. Information on the Company—History and Development of the Company—ASE Test Share Acquisition and Privatization.”

Syndicated Loan Agreements between Advanced Semiconductor Engineering, Inc. and banking syndicates led by Citibank, N.A., Taipei Branch

On March 3, 2008, we entered into a syndicated loan agreement with a banking syndicate led by Citibank, N.A., Taipei Branch for a NT\$24,750.0 million (US\$763.2 million) term loan facility for the purposes of financing our acquisition of all the outstanding ordinary shares of ASE Test pursuant to the Scheme. On May 29, 2008, we entered into an additional syndicated loan agreement with a banking syndicate led by Citibank, N.A., Taipei Branch for a US\$200.0 million term loan facility, also in connection with the Scheme. For more information on the Scheme, see “Item 4. Information on the Company—History and Development of the Company—ASE Test Share Acquisition and Privatization.”

Equity Purchase Agreement between Aimhigh Global Corp., TCC Steel and J&R Holding Limited in respect of Weihai Aimhigh Electronic Co. Ltd.

On March 17, 2008, we, through our subsidiary J&R Holding Limited, entered into an equity purchase agreement with Aimhigh Global Corp. and TCC Steel in connection with the acquisition of 100.0% of ASE Weihai Inc., formerly known as Weihai Aimhigh Electronic Co. Ltd., for a purchase price of US\$7.0 million.

EXCHANGE CONTROLS

ROC Exchange Controls

The ROC Foreign Exchange Control Law and regulations provide that all foreign exchange transactions must be executed by banks designated by the ROC Financial Supervisory Commission, Executive Yuan and by the Central Bank of the Republic of China (Taiwan) to engage in such transactions. Current regulations favor trade-related foreign exchange transactions. Consequently, foreign currency earned from exports of merchandise and services may now be retained and used freely by exporters, and all foreign currency needed for the importation of merchandise and services may be purchased freely from the designated foreign exchange banks.

Apart from trade, ROC companies and resident individuals may, without foreign exchange approval, remit outside and into the ROC foreign currency of up to US\$50 million (or its equivalent) and US\$5 million (or its equivalent) respectively in each calendar year. The above limits apply to remittances involving a conversion of NT dollars to a foreign currency and vice versa. A requirement is also imposed on all enterprises to register medium- and long-term foreign debt with the Central Bank of the Republic of China (Taiwan).

In addition, foreign persons may, subject to specified requirements, but without foreign exchange approval of the Central Bank of the Republic of China (Taiwan), remit outside and into the ROC foreign currencies of up to US\$100,000 (or its equivalent) for each remittance. The above limit applies to remittances involving a conversion of

NT dollars to a foreign currency and vice versa. The above limit does not, however, apply to the conversion of NT dollars into other currencies, including U.S. dollars, from the proceeds of sale of any underlying shares withdrawn from a depositary receipt facility.

Table of Contents

TAXATION

ROC Taxation

The following discussion describes the material ROC tax consequences of the ownership and disposition of the common shares or ADSs to a non-resident individual or non-resident entity that holds the common shares or ADSs (referred to here as a “non-ROC holder”). As used in the preceding sentence, a “non-resident individual” is a non-ROC national who owns the common shares or ADSs and is not physically present in the ROC for 183 days or more during any calendar year and a “non-resident entity” is a corporation or a non-corporate body that owns the common shares or ADSs, is organized under the laws of a jurisdiction other than the ROC and has no fixed place of business or business agent in the ROC.

Dividends

Dividends (whether in cash, common shares or ADSs) declared by us out of retained earnings and distributed to a non-ROC holder in respect of common shares or ADSs are subject to ROC withholding tax, currently at the rate of 20% on the amount of the distribution (in the case of cash dividends) or on the par value of the distributed common shares (in the case of stock dividends). A 10% undistributed earnings tax is imposed on a ROC company for its after-tax earnings generated after January 1, 1998 which are not distributed in the following year. The undistributed earnings tax so paid will further reduce the retained earnings available for future distribution. When we declare a dividend out of those retained earnings, an amount in respect of the undistributed earnings tax, up to a maximum amount of 10% of the dividend to be distributed, will be credited against the 20% withholding tax imposed on the non-ROC holders.

Distributions of stock dividends out of capital reserves will not be subject to withholding tax.

Capital Gains

Under current ROC law, capital gain realized upon the sale or other disposition of securities is exempt from ROC income tax. This exemption currently applies to capital gains derived from the sale of common shares.

Sales of ADSs by non-ROC holders are not regarded as sales of ROC securities and thus any gains derived from transfers of ADSs are not currently subject to ROC income tax.

Sale

Securities transaction tax will be imposed on the seller at the rate of 0.3% of the transaction price upon a sale of common shares. Transfers of ADSs are not subject to ROC securities transaction tax.

Subscription Rights

Distributions of statutory subscription rights for the common shares in compliance with the ROC Company Act are currently not subject to ROC tax. Proceeds derived from sales of statutory subscription rights evidenced by securities are currently exempted from income tax but are subject to securities transaction tax, currently at the rate of 0.3% of the gross amount received. Income derived from sales of statutory subscription rights which are not evidenced by securities are subject to income tax (capital gains tax) at a fixed rate of 20% of the income. Subject to compliance with ROC law, we, in our sole discretion, may determine whether statutory subscription rights are evidenced by securities.

Estate and Gift Tax

ROC estate tax is payable on any property within the ROC of a deceased non-resident individual, and ROC gift tax is payable on any property within the ROC donated by a non-resident individual. Estate tax is currently imposed at rates ranging from 2% of the first NT\$670,000 to 50% of amounts in excess of NT\$111,320,000. Gift tax is imposed at rates ranging from 4% of the first NT\$670,000 donated to 50% of amounts donated in excess of NT\$50,090,000. Under the ROC Estate and Gift Act, shares and bonds issued by ROC companies are deemed located in the ROC without regard to the location of the owner. It is unclear whether a holder of ADSs will be considered to own common shares for this purpose.

Table of Contents

Tax Treaty

At present, the ROC has income tax treaties with Indonesia, Singapore, New Zealand, Australia, the United Kingdom, South Africa, Gambia, Swaziland, Malaysia, Macedonia, the Netherlands, Senegal, Sweden, Belgium, Denmark and Vietnam. These tax treaties may limit the rate of ROC withholding tax on dividends paid with respect to common shares in ROC companies. It is unclear whether a non-ROC holder of ADSs will be considered to own common shares for the purposes of such treaties. Accordingly, a holder of ADSs who is otherwise entitled to the benefit of a treaty should consult its own tax advisers concerning eligibility for benefit under the treaty with respect to the ADSs as the case may be. The United States does not have an income tax treaty with the ROC.

United States Federal Income Taxation

The following discussion describes the material U.S. federal income tax consequences of the ownership and disposition of common shares or ADSs to those U.S. holders described below who hold such common shares or ADSs as capital assets for U.S. federal income tax purposes. For these purposes, you are a U.S. holder if you are a beneficial owner of common shares or ADSs and are, for U.S. federal income tax purposes:

- a citizen or resident of the United States;
- a corporation, or other entity taxable as a corporation, created or organized under the laws of the United States or of any political subdivision of the United States; or
- an estate or trust the income of which is subject to U.S. federal income tax purposes regardless of its source.

This discussion assumes that we are not a passive foreign investment company, as discussed below.

This discussion does not address all of the tax consequences that may be relevant in light of your particular circumstances. In particular, it does not address all of the tax consequences that may be relevant to holders subject to special rules, including:

- persons subject to the alternative minimum tax;
- insurance companies;
- tax-exempt entities;
- dealers or traders in securities or foreign currencies;
- certain financial institutions;
- partnerships or other entities classified as partnerships for U.S. federal income tax purposes;
- persons carrying on a trade or business in the ROC;
- persons who hold or will hold common shares or ADSs as part of a straddle, hedge, conversion transaction, integrated transaction or similar transaction;
- persons whose functional currency for U.S. federal income tax purposes is not the U.S. dollar;

- persons who own 10% or more of our voting stock; or
- persons who acquired our common shares or ADSs pursuant to the exercise of any employee stock option or otherwise as compensation.

84

Table of Contents

This discussion is based on the Internal Revenue Code of 1986, as amended, final, temporary and proposed Treasury regulations, administrative announcements and judicial decisions, all as of the date hereof. These laws and regulations are subject to change, possibly with retroactive effect. This discussion is also based in part on representations by the depositary and assumes that each obligation under the deposit agreement and any related agreement will be performed in accordance with its terms.

In general, for U.S. federal income tax purposes, a U.S. holder of ADSs should be treated as the holder of the common shares represented by the ADSs.

The U.S. Treasury has expressed concerns that parties to whom American depositary receipts are released before delivery of shares to the depositary (“pre-release”) may be taking actions that are inconsistent with the claiming of foreign tax credits by the holders of American depositary receipts. Such actions would also be inconsistent with the claiming of the reduced rate of tax applicable to dividends received by certain noncorporate U.S. holders. Accordingly, the analysis of the creditability of ROC taxes and the availability of the reduced tax rate for dividends received by certain noncorporate U.S. holders, both described below, could be affected by actions that may be taken by parties to whom the ADSs are pre-released.

Please consult your tax adviser with regard to the application of the U.S. federal income tax laws to common shares or ADSs as well as any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdictions.

Dividends

Distributions paid on common shares or ADSs (other than certain pro rata distributions of common shares to all shareholders, including holders of ADSs), including the amount of any ROC taxes withheld thereon, reduced by any credit against the withholding tax on account of the 10% retained earnings tax imposed on us, generally will constitute foreign source dividend income to the extent paid out of our current or accumulated earnings and profits as determined in accordance with U.S. federal income tax principles. Because we do not maintain calculations of our earnings and profits under U.S. federal income tax principles, we expect that distributions will generally be reported to U.S. holders as dividends. The amount you will be required to include in income for any dividend paid in NT dollars will be equal to the U.S. dollar value of the NT dollars paid, calculated by reference to the exchange rate in effect on the date the payment is received by the depositary (in the case of ADSs) or by you (in the case of common shares), regardless of whether the payment is in fact converted into U.S. dollars on the date of receipt. If you do not convert the amount of any dividend income received into U.S. dollars and you realize gain or loss on a sale or other disposition of NT dollars, it generally will be U.S. source ordinary income or loss. The amount of any distribution of property other than cash will be the fair market value of such property on the date of distribution. You will not be entitled to a dividends-received deduction for dividends you receive.

Subject to applicable limitations and the discussion above regarding concerns expressed by the U.S. Treasury, under current law, certain dividends paid by qualified foreign corporations to certain noncorporate U.S. holders in taxable years beginning before January 1, 2011 are taxable at a maximum rate of 15%. A foreign corporation is treated as a qualified foreign corporation with respect to dividends paid on stock that is readily tradable on a securities market in the United States, such as the New York Stock Exchange, where our ADSs are traded. You should consult your own tax advisers to determine whether the favorable rates may apply to dividends you receive and whether you are subject to any special rules that limit your ability to be taxed at this favorable rate.

Subject to applicable limitations and restrictions and the discussion above regarding concerns expressed by the U.S. Treasury, the ROC taxes withheld from dividend distributions, reduced by any credit against the withholding tax which is paid by the Company on account of the 10% retained earnings tax, will be eligible for credit against your U.S. federal income tax liability. The limitation on foreign taxes eligible for credit is calculated separately with

respect to specific classes of income. The rules governing foreign tax credits are complex and, therefore, you should consult your own tax adviser regarding the availability of foreign tax credits in your particular circumstances. Instead of claiming a credit, you may, at your election, deduct such otherwise creditable ROC taxes in computing your taxable income, subject to generally applicable limitations under U.S. law.

Table of Contents

Certain pro rata distributions of common shares by a company to all of its shareholders, including holders of ADSs, will not be subject to U.S. federal income tax. Accordingly, these distributions will not give rise to U.S. federal income against which the ROC tax imposed on these distributions may be credited. You should consult your tax adviser as to whether any ROC tax imposed on these pro rata distributions of common shares may be creditable against your U.S. foreign source income from other sources.

Capital Gains

You will generally recognize U.S. source capital gain or loss for U.S. federal income tax purposes on the sale or exchange of common shares or ADSs, which will be long-term capital gain or loss if the common shares or ADSs were held for more than one year. The amount of gain or loss will be equal to the difference between your tax basis in the common shares or ADSs disposed of and the amount realized on disposition. You should consult your own tax adviser about the treatment of capital gains, which may be taxed at lower rates than ordinary income for non-corporate taxpayers, and capital losses, the deductibility of which may be limited.

Deposits and withdrawals of common shares by a U.S. holder in exchange for ADSs will not result in realization of gain or loss for U.S. federal income tax purposes.

Passive Foreign Investment Company Rules

We believe that we were not a passive foreign investment company, or PFIC, for U.S. federal income tax purposes for 2007. However, since PFIC status depends upon the composition of our income and assets and the market value of our assets (including, among others, less than 25 percent owned equity investments) from time to time, there can be no assurance that we will not be considered a PFIC for any taxable year. If we were treated as a PFIC for any taxable year during which a U.S. holder held a common share or an ADS, certain adverse consequences could apply the U.S. holder.

Information Reporting and Backup Withholding

Payment of dividends and sales proceeds that are made within the United States or through certain U.S.-related financial intermediaries generally are subject to information reporting and to backup withholding unless (i) you are a corporation or other exempt recipient or (ii) in the case of backup withholding, you provide a correct taxpayer identification number and certify that you are not subject to backup withholding.

The amount of any backup withholding from a payment to you will be allowed as a credit against your United States federal income tax liability and may entitle you to a refund, provided that the required information is furnished to the Internal Revenue Service.

Item 11. Quantitative and Qualitative Disclosures about Market Risk

Market Risk

Our exposure to financial market risks relates primarily to changes in interest rates and foreign currency exchange rates. To mitigate these risks we utilize derivative financial instruments, the application of which is primarily to manage these exposures and not for speculative purposes.

Interest Rate Risk. Our exposure to interest rate risks relates primarily to our long-term floating rate debt, which is normally incurred to support our corporate activities and capital expenditures.

In December 2003, we entered into an interest rate swap contract whereby we pay NT dollars at the 90-day BA rate minus 0.70% in exchange for three possible payoff scenarios: (1) if the US dollar 6-month LIBOR is below 0.95%, we receive the US dollar 6-month LIBOR per annum; (2) if the US dollar 6-month LIBOR is equal to or above 0.95% and equal to or below 2.00%, we receive 3.60% per annum; and (3) if the US dollar 6-month LIBOR is above 2.00%, we receive either 4.00% minus US dollar 6-month LIBOR or 0%, whichever is greater. The contract has a notional amount of NT\$2,750.0 million, of which NT\$1,375.0 million expired in January 2008 and the remaining amount expires in January 2009. As of December 31, 2007, the contract's fair value was negative NT\$20.3 million (US\$0.6 million).

In October 2003, we entered into two cross-currency swap contracts to hedge against reductions in value caused by changes in foreign currency exchange rates, as well as to manage our exposure to interest rates. The final outstanding amounts under these contracts expired in October 2007, and we have subsequently entered into a number of smaller, monthly cross-currency swap contracts. See “—Foreign Currency Exchange Rate Risk.”

The table below sets forth information relating to our significant obligations that are sensitive to interest rate fluctuations as of December 31, 2007.

| | Expected Maturity Date | | | | | | Total | Fair Value |
|-------------------------|-----------------------------------|---------|---------|---------|------|------------|----------|------------|

Table of Contents

Foreign Currency Exchange Rate Risk. Our foreign currency exposure gives rise to market risk associated with exchange rate movements against the NT dollar, our functional currency. Currently, the majority of our revenues from packaging and testing services are denominated in U.S. dollars, with a portion denominated in NT dollars and Japanese yen. Our costs of revenues and operating expenses associated with packaging and testing services are incurred in several currencies, primarily in NT dollars and U.S. dollars, as well as, to a lesser extent, Korean won, Japanese yen, Malaysian ringgit and PRC renminbi. In addition, a substantial portion of our capital expenditures, primarily for the purchase of packaging and testing equipment, has been, and is expected to continue to be, denominated primarily in U.S. dollars with the remainder in Japanese yen. Fluctuations in exchange rates, primarily among the U.S. dollar, the NT dollar, the PRC renminbi and the Japanese yen, will affect our costs and operating margins and could result in exchange losses and increased costs in NT dollar and other local currency terms. Despite hedging and mitigating techniques implemented by us, fluctuations in exchange rates have affected, and may continue to affect, our financial condition and results of operations. We recorded net foreign exchange gains of NT\$154.3 million, NT\$92.8 million and NT\$403.5 million (US\$12.4 million) in 2005, 2006 and 2007, respectively. In 2005, 2006 and 2007, the average exchange rate of the NT dollar to the U.S. dollar was 32.13, 32.51 and 32.85, respectively, calculated using noon buying rates in The City of New York for cable transfers in NT dollars as certified for customs purposes by the Federal Reserve Bank of New York.

Foreign currency denominated liabilities as of December 31, 2007 primarily include U.S. dollar debt and Japanese yen debt. As of December 31, 2007, approximately 53.4% of our cash and accounts receivable were denominated in U.S. dollars, with a substantial portion of the remainder denominated primarily in NT dollars and Japanese yen. As of December 31, 2007, approximately 84.5% of our accounts payable and payable for properties were denominated in currencies other than the NT dollar. To protect against reductions in value and the volatility of future cash flows caused by changes in foreign currency exchange rates, we utilize currency forward contracts from time to time to reduce the impact of foreign currency fluctuations on our results of operations. Our policy is to account for these contracts on a mark-to-market rate basis.

In October 2003, we entered into two cross-currency swap contracts to hedge against exchange rate fluctuations in connection with our US\$200.0 million zero coupon convertible bonds due 2008, of which US\$15.0 million were repurchased in the market in April 2005.

The terms of one of such contracts provided that we pay NT dollars at a fixed rate of 1.7% and receive U.S. dollars at a fixed rate of 2.7%. The contract rate was US\$/NT\$33.95. The contract had a notional amount of US\$157.0 million/NT\$5,330.2 million. In April 2005, the notional amount of US\$15.0 million was terminated early because of the repurchase in the market of a portion of our foreign convertible bonds. The remaining US\$142.0 million expired in October 2007.

The other such contract was terminated in December 2005. Under this contract we were to pay U.S. dollars at a floating rate that is the percentage by which LIBOR is greater than 2% and receive NT dollars at a floating rate that is the percentage by which LIBOR is less than 2%. The contract rate was US\$/NT\$33.95. The contract had a notional amount of US\$43.0 million/NT\$1,459.9 million.

In 2007, following the expiration of the final outstanding amounts under our October 2003 contracts, we entered into a number of smaller, monthly cross-currency swap contracts. As of December 31, 2007, we had US\$139.2 million outstanding under these contracts. The terms of the contracts provide that we pay NT dollars at a fixed rate of 1.7% and receive U.S. dollars at a fixed rate of 4.45%. The contract rate for these contracts is US\$/NT\$32.522. As of December 31, 2007, the contracts had a fair value of negative NT\$7.5 million (US\$0.2 million).

Table of Contents

The table below sets forth our outstanding forward exchange contracts in aggregate terms by type of contract as of December 31, 2007.

Forward Exchange Contracts

| | |
|-------------------------------|---------------------------|
| Sell US\$ against NT\$ | |
| Notional Amount | US\$190.0 million |
| Weighted Average Strike Price | US\$/NT\$32.267 |
| Fair Value | Negative US\$0.45 million |
| Sell US\$ against JP¥ | |
| Notional Amount | US\$16.0 million |
| Weighted Average Strike Price | US\$/JP¥111.48 |

| Sell US\$ against KRW | |
| Notional Amount | US\$5.0 million |
| Weighted Average Strike Price | US\$/KRW939.5 |
| Fair Value | US\$0.04 million |
| Buy US\$ against NT\$ | |
| Notional Amount | US\$15.0 million |
| Weighted Average Strike Price | US\$/NT\$32.203 |
| Fair Value | US\$0.08 million |
| Sell US\$ against MYR | |
| Notional Amount | US\$8.0 million |
| Weighted Average Strike Price | US\$/MYR3.324 |
| Fair Value | US\$0.05 million |

Other Market Risk. Our exposure to other market risk relates primarily to our investments in publicly-traded stock and open-ended mutual funds. The value of these investments may fluctuate based on various factors including prevailing market conditions. Moreover, the fair value of investments in unlisted securities may be significantly different from their carrying value. Of our investments in publicly-traded stocks and open-ended mutual funds held as of December 31, 2007, NT\$1,599.4 million (US\$49.3 million) were classified as financial assets held for trading and NT\$9.406.3 million (US\$290.1 million) were classified as available-for-sale financial assets.

Item 13. Defaults, Dividend Arrearages and Delinquencies

Not applicable.

Item 14. Material Modifications to the Rights of Security Holders and Use of Proceeds

Not applicable.

Item 15. Controls and Procedures

Disclosure Controls and Procedures

As of December 31, 2007, we, under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, performed an evaluation of the effectiveness of our disclosure controls and procedures as defined in Rules 13a-15(e) and 15(d)-15(e) under the Exchange Act. Our management necessarily applied its judgment in assessing the costs and benefits of such controls and procedures, which by their nature can provide only reasonable assurance regarding management's control objectives. Based on this evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures are effective for recording, processing, summarizing and reporting, within the time periods specified in the SEC's rules and forms, information required to be disclosed in the reports we file or submit under the Exchange Act, and for accumulating and communicating such information to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Management's Annual Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as defined in Rule 13a-15(f) or 15d-15(f) promulgated under the Securities Exchange Act of 1934.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Our management assessed the effectiveness of our internal control over financial reporting as of December 31, 2007. In making this assessment, our management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control-Integrated Framework.

Based on this assessment, management concluded that, as of December 31, 2007, our internal control over financial reporting is effective based on those criteria.

Attestation Report of the Registered Public Accounting Firm

To the Board of Directors and Shareholders of
Advanced Semiconductor Engineering, Inc.

We have audited the internal control over financial reporting of Advanced Semiconductor Engineering, Inc. and subsidiaries (the "Company") as of December 31, 2007, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely

detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

90

Table of Contents

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on the criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with auditing standards generally accepted in the Republic of China and the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements as of and for the year ended December 31, 2007 of the Company and our report dated April 10, 2008 expressed an unqualified opinion on those financial statements.

Changes in Internal Control Over Financial Reporting

There has been no change in our internal control over financial reporting that occurred during the period covered by this annual report that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Item 16. [Reserved]

Item 16A. Audit Committee Financial Expert

Our board of directors determined that Alan Cheng is an audit committee financial expert as defined under the applicable rules of the SEC issued pursuant to Section 407 of the Sarbanes-Oxley Act of 2002 and is independent for the purposes of Rule 10A-3 of the Exchange Act.

Item 16B. Code of Ethics

We have adopted a code of ethics that satisfies the requirements of Item 16B of Form 20-F and applies to all employees, officers, supervisors and directors of our company and our subsidiaries, including our Chief Executive Officer and Chief Financial Officer. We have posted our code of ethics on our website at <http://www.aseglobal.com>.

Item 16C. Principal Accountant Fees and Services

Policy on Pre-Approval of Audit and Non-Audit Services of Independent Registered Public Accounting Firm

Our audit committee, which was established on July 22, 2005, pre-approves all audit and non-audit services provided by our independent registered public accounting firm, including audit services, audit-related services, tax services and other services, on a case-by-case basis. Accordingly, we have not established any pre-approval policies and procedures. Prior to the establishment of our audit committee, such services were pre-approved by our board of

directors.

91

Table of Contents

Independent Registered Public Accounting Firm's Fees

The following table sets forth the aggregate fees by categories specified below in connection with certain professional services rendered by Deloitte & Touche. We did not pay any other fees to our independent registered public accounting firm during the periods indicated below.

| | For the Year Ended December 31, | | US\$ |
|-----------------------|---------------------------------|------------------|----------------|
| | 2006 NT\$ | 2007 NT\$ | |
| | (in thousands) | | |
| Audit fees(1) | 110,695.1 | 116,097.2 | 3,579.9 |
| Audit-related fees(2) | 1,658.7 | 5,240.1 | 161.6 |
| Tax fees(3) | 12,056.8 | 11,540.7 | 355.9 |
| All other fees(4) | 2,388.4 | 2,535.4 | 78.2 |
| Total | 126,799.0 | 135,413.4 | 4,175.6 |

- (1) Audit fees are defined as the standard audit and review work that needs to be performed each year in order to issue an opinion on our consolidated financial statements and to issue reports on the local statutory financial statements. It also includes services that can only be provided by our auditor such as statutory audits required by the Tax Bureau of the ROC and the Customs Bureau of the ROC, auditing of non-recurring transactions and application of new accounting policies, pre-issuance reviews of quarterly financial results, consents and comfort letters and any other audit services required for SEC or other regulatory filings.
- (2) Audit-related fees include assurance and related services provided by auditors that are reasonably related to the performance of the audit or review of our financial statements and not reported above under "Audit fees." They comprise amounts for services such as acquisition due diligence and consultation concerning financial accounting and reporting matters.
- (3) Tax fees consist of professional services rendered by Deloitte & Touche for tax compliance and tax advice. The services for the fees disclosed under this category include tax return preparation and technical tax advice.
- (4) Other fees primarily consist of fees for agreed-upon procedures as required by the ROC government for capital investments in the PRC and the review of an application of one of our subsidiaries to ROC regulatory authorities for an initial public offering.

Item 16D. Exemptions from the Listing Standards for Audit Committees.

Not applicable.

Item 16E. Purchases of Equity Securities by the Issuer and Affiliated Purchasers.

None of our equity securities were purchased by ourselves or our affiliated purchasers in 2007.

PART III

Item 17. Financial Statements

The Company has elected to provide financial statements for fiscal year 2007 and the related information pursuant to Item 18.

Item 18. Financial Statements

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Advanced Semiconductor Engineering, Inc.

We have audited the accompanying consolidated balance sheets of Advanced Semiconductor Engineering, Inc. (a corporation incorporated under the laws of the Republic of China) and its subsidiaries (collectively the “Company”) as of December 31, 2006 and 2007, and the related consolidated statements of operations, changes in shareholders’ equity and cash flows for each of the three years in the period ended December 31, 2007, all expressed in New Taiwan dollars. These consolidated financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the Rules Governing the Audit of Financial Statements by Certified Public Accountants, auditing standards generally accepted in the Republic of China and the Standards of the Public Company Accounting Oversight Board (United States). Those rules and standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of the Company as of December 31, 2006 and 2007, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2007, in conformity with the Guidelines Governing the Preparation of Financial Reports by Securities Issuers, the requirements of the Business Accounting Law and Guidelines Governing Business Accounting relevant to financial accounting standards, and accounting principles generally accepted in the Republic of China.

As discussed in Note 29 to the consolidated financial statements, the Company incurred fire damage to its production line and facilities in Chung Li, Taiwan on May 1, 2005. The Company recognized an estimated loss of NT\$13,479,079 thousand for the damage to its inventories, building, machinery and equipment, net of NT\$4,641,000 thousand of insurance receivable in 2005. The Company reached a final settlement with the insurers in June 2006 with regards to the fire damage referred to above. The final settlement amount of NT\$8,068,000 thousand, less the NT\$4,641,000 thousand recorded in 2005 and the related repair and restoring expenses of NT\$1,043,132 thousand, was recorded as a gain in 2006. The Company also reversed NT\$2,190,583 thousand of previously recorded impairment charges on these fire-damaged building, machinery and equipment due to an increase in the estimated service potential of the assets. The net amount of NT\$4,574,451 thousand was recognized as a gain on insurance settlement and impairment recovery.

Table of Contents

As discussed in Note 3 to the consolidated financial statements, the Company adopted the Republic of China Statement of Financial Accounting Standards No. 34, "Financial Instruments: Recognition and Measurement", No. 36, "Financial Instruments: Disclosure and Presentation" and other revised Statements on January 1, 2006.

Accounting principles generally accepted in the Republic of China differ in certain significant respects from accounting principles generally accepted in the United States of America. Information relating to the nature and effect of such differences is presented in Note 31 to the consolidated financial statements.

Our audits also comprehended the translation of New Taiwan dollar amounts into U.S. dollar amounts and, in our opinion, such translation has been made in conformity with the basis stated in Note 2 to the consolidated financial statements. Such U.S. dollar amounts are presented solely for the convenience of the readers.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2007, based on the criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated April 10, 2008 expressed an unqualified opinion on the Company's internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

DECEMBER 31, 2005, 2006 AND 2007

(Amounts in Thousands, Except Per Share Data and Unless Otherwise Stated)

1. HISTORY AND ORGANIZATION

Advanced Semiconductor Engineering, Inc. (“ASE Inc. or including its subsidiaries, collectively the “Company”), a corporation incorporated under the laws of Republic of China (the “ROC”), is an independent provider of semiconductor packaging and testing services and offers a comprehensive range of advanced IC packaging and testing service. The common shares of ASE Inc. are traded on the Taiwan Stock Exchange under the symbol “2311”. Since September 2000, the common shares of ASE Inc. have been traded on the New York Stock Exchange under the symbol “ASX” in the form of American depositary shares (“ADS”). The Company and its affiliates are together referred to as the “ASE Group”.

As of December 31, 2006 and 2007, the Company had approximately 27,000 and 30,000 employees, respectively.

Set forth is a brief overview of the Company’s organizational structure.

a. Wholly-owned subsidiaries as of December 31, 2007:

- 1) ASE Holding Limited (incorporated in Bermuda in April 1990), which holds shares in ASE Group companies;
- 2) ASE Marketing Services Ltd. (incorporated in Hong Kong in February 1991), which is engaged in trading activities. ASE Marketing Services Ltd. was dissolved in July 2007;
- 3) J&R Holding Limited (incorporated in Bermuda in December 1995), which holds shares in ASE Group companies;
- 4) ASE Marketing & Service Japan Co., Ltd. (incorporated in Japan in November 2003), which is engaged in marketing and provides sales services in the packaging and testing markets; and
- 5) Innosource Limited (“Innosource”), which is a holding company incorporated in the British Virgin Islands in June 2001 and through which the Company invested in ASE (Kun Shan) Inc. and ASE Module (Shanghai) Inc. Due to an organizational restructuring, the Company transferred its shareholding in ASE (Kun Shan) from Innosource to Omniquest Industrial Limited (“Omniquest”), a subsidiary of ASE Inc. through direct and indirect ownership, and invested an additional US\$30,000 thousand in Omniquest in August 2006. As of December 31, 2007, Innosource held a 20% ownership interest in Omniquest.

b. As of December 31, 2007, the Company held more than 50% ownership interest in the following subsidiaries:

- 1) 99.5% ownership interest in ASE Technologies, Inc. (incorporated in the ROC in June 1991), which is engaged in the research and development, manufacture and sales of computers and related accessories. ASE Technologies, Inc. is in the process of liquidation;
- 2)

90.0% ownership interest in ASE Network Inc. (incorporated in the ROC in January 2000), which is engaged in investing activities. ASE Network Inc. is in the process of liquidation and returned NT\$808,110 thousand (US\$24,919 thousand) to ASE Inc in 2007; and

F-11

Table of Contents

3)65.6% direct ownership interest in Omniquest, which the other 20.0% and 14.4% held through Innosource and J&R Holding Limited, respectively. Omniquest invested in ASE (Shanghai) Inc. (“ASE Shanghai”) and ASE High-Tech (Shanghai) Inc. in September 1990 and February 2006, respectively. As a result of an investment restructuring, the Company made new investments in ASE Corporation (incorporated in the British Cayman Islands in August 2006 and has two wholly-owned subsidiaries, ASE Mauritius Inc. and ASE Labuan Inc.) through Omniquest. The Company then transferred the shareholding in ASE Shanghai, ASE (Kun Shan) Inc. and ASE High-Tech (Shanghai) Inc. from Omniquest to ASE Mauritius Inc.

ASE Shanghai held a 90% ownership interest in Shanghai Ding Hui Real Estate Development Co., Ltd.

In March 2006, ASE Inc. established ASE Electronics Inc. (“ASE Electronics”) in ASE Electronics is engaged in the production of substrates. In June 2006, the shareholders’ meeting of ASE Inc. resolved to spin off its material operation and transfer the related assets and liabilities to ASE Electronics. Further, in order to streamline global strategy and financial planning, ASE Inc. transferred its ownership of ASE Electronics to ASE Labuan Inc.

c. ASE Holding Limited has the following wholly-owned or majority-owned subsidiaries:

- 1)ASEP Realty Corporation (incorporated in the Philippines in December 1995), which is in the process of liquidation;
- 2)ASE Holding Electronics (Philippines), Incorporated (incorporated in the Philippines in December 1995), which manufactures electronic products, components and semiconductors, and is in the process of liquidation; and
- 3)70.0% ownership interest in ASE Investment (Labuan) Inc. (incorporated in Malaysia in June 1999). ASE Investment (Labuan) Inc. holds shares in ASE Korea Inc. (“ASE Korea”) (incorporated in Korea in 1999), which engages in the packaging and testing of semiconductors. In addition, ASE Test Limited owns the remaining 30.0% ownership interest in ASE Investment (Labuan) Inc.

A portion of the share capital of the subsidiaries incorporated in the Philippines is held by certain Filipino individuals, on behalf of the Company, in order to comply with Philippine legal requirements.

d.J&R Holding Limited (“J&R”) has the following wholly-owned or majority-owned subsidiaries:

- 1)100.0% ownership interest in J&R Industrial Inc. (incorporated in the ROC in April 1999), which is mainly engaged in the leasing of substrate, packaging and testing equipment to ASE Group companies. J&R Industrial Inc. reduced its capital and returned NT\$2,953,000 thousand to J&R in June 2006;
- 2)100.0% ownership interest in Grand Innovation Co., Ltd. (incorporated in the British Virgin Islands in March 2001), which is engaged in investing activities;
- 3)39.3% ownership interest in ASE Test Limited (“ASE Test”) (incorporated in Singapore in May 1996), which holds shares in ASE Group companies. ASE Holding Limited holds another 11.0% ownership interest in ASE Test. Since June 1996, shares of ASE Test have been traded on the NASDAQ National Market in the United States under the symbol “ASTSF”. In addition, J&R offered part of its shares in ASE Test in the form in Taiwan Depositary Receipts (“TDR”), which are traded on the Taiwan Stock Exchange under the symbol “9101”;

Table of Contents

On September 4, 2007, ASE Inc. entered into a scheme implementation agreement (the “Scheme Implementation Agreement”) with ASE Test, pursuant to which ASE Inc. agreed to acquire the outstanding ordinary shares (including those represented by TDRs) of ASE Test other than those held by the Company. The proposed acquisition will be effected by way of a scheme of arrangement under Section 210 of the Companies Act, Chapter 50 of Singapore (the “Scheme”). According to the terms of the Scheme Implementation Agreement, upon the effectiveness of the Scheme, the ordinary shares of ASE Test listed on NASDAQ (the “ASE Test NASDAQ Shares”) will be acquired by ASE Inc. for US \$14.78 per share in cash, and the TDRs will be acquired by ASE Inc. for the New Taiwan dollar equivalent of US \$0.185 per TDR in cash (based on the prevailing exchange rate) (such consideration referred to herein as “Scheme Consideration”). If the Scheme becomes effective, ASE Test will become an indirect wholly-owned subsidiary of ASE Inc., and ASE Test NASDAQ Shares and TDRs will be delisted from NASDAQ and the Taiwan Stock Exchange, respectively. As of April 10, 2008, the acquisition is still in progress.

- 4) 100% ownership interest in ASE Japan Co., Ltd. (“ASE Japan”) (incorporated in Japan in May 2004), which is engaged in the packaging and testing of integrated circuit;
- 5) 100% ownership interest in ASE (U.S.) Inc. (incorporated in the USA in December 1983), which is engaged in marketing and provides sales services relating to packaging and testing;
- 6) 58.9% ownership interest in PowerASE Technology Holding Limited (“PowerASE Limited”) (incorporated in the British Cayman Islands in December 2006), which is a holding company that invested in PowerASE Technology Inc. (incorporated in the ROC in June 2006). ASE Inc. and J&R Holding Limited together had a 60% and 56% ownership interest in PowerASE Technology Inc. as of December 31, 2006 and 2007, respectively. PowerASE Technology Inc. is engaged in the packaging and testing of memory integrated circuit;
- 7) 100% ownership interest in Top Master Enterprises Limited (“TME”) (incorporated in the British Virgin Islands in November 2005), which is a holding company and holds 100% ownership interest in Global Advanced Packaging Technology Limited (“GAPT – Cayman”) (incorporated in the British Cayman Islands in October 1990). GAPT – Cayman holds shares in ASE Group companies. In order to streamline the structure, TME was merged with J&R in December 2007. TME is in the process of liquidation.

Fair values of assets and liabilities of TME and its subsidiaries as of the acquisition date were as follows:

| | NT\$ |
|-------------------------------|--------------|
| Cash | \$ 1,180,780 |
| Accounts receivable | 1,446,989 |
| Inventories | 213,162 |
| Property, plant and equipment | 5,061,048 |
| Land use right | 153,087 |
| Goodwill | 365,366 |
| Other assets | 168,427 |
| Short-term borrowings | (2,270,101) |
| Accounts payable | (933,440) |
| Long-term bank loans | (2,384,342) |
| Other liabilities | (1,045,216) |
| | \$ 1,955,760 |

8)

60% ownership interest in Suzhou ASEN Semiconductors Co., Ltd (“ASEN”) (formerly Suzhou NXP Semiconductors, incorporated in China in May 2001), which is engaged in the packaging and testing of semiconductors. In September 2007, J&R paid NT\$705,608 thousand (US\$21,600 thousand) to acquire a 60% ownership interest in ASEN from Holland NXP B.V.

Table of Contents

Fair values of assets and liabilities of ASEN as of the acquisition date were as follows:

| | NT\$ |
|-------------------------------|------------|
| Cash | \$ 633,699 |
| Accounts receivable | 366,320 |
| Inventories | 26,539 |
| Property, plant and equipment | 626,104 |
| Other assets | 3,224 |
| Accounts payable | (314,324) |
| Payable for properties | (81,694) |
| Other liabilities | (65,126) |
| | 1,194,742 |
| Minority interest | (489,134) |
| | \$ 705,608 |

e.ASE Test has four direct subsidiaries:

- 1) ASE Test, Inc. (incorporated in the ROC in December 1987 and wholly-owned by ASE Test), which is engaged in the testing of semiconductors;
- 2) ASE Holdings (Singapore) Pte Ltd. (incorporated in Singapore in December 1994), which is engaged in investing activities;
- 3) ASE Test Holdings, Limited (“ASE Test Holdings”) (incorporated in the Cayman Islands in April 1999), which is engaged in investing activities; and
- 4) ASE Test Finance Limited (“ASE Test Finance”) (incorporated in Mauritius in June 1999), which is engaged in financing activities.

ASE Holding (Singapore) Pte Ltd. has a wholly-owned subsidiary, ASE Electronics (M) Sdn. Bhd. (“ASE Test Malaysia”) (incorporated in Malaysia in February 1991), which is engaged in the packaging and testing of semiconductors. ASE Test Malaysia disposed of its camera module operations on October 3, 2005 (Note 28).

ASE Test Holdings has a wholly-owned subsidiary, ISE Labs, Inc. (“ISE Labs”) (incorporated in California, U.S.A. in November 1983). ISE Labs and its wholly-owned subsidiaries, ASE Singapore Pte Ltd., ISE Technology, Inc. and Digital Testing Services Inc., are engaged in the front-end engineering testing and final testing of semiconductors.

f.GAPT – Cayman has two subsidiaries:

- 1) 100% ownership interest in ASE Assembly & Test (Shanghai) Limited (“ASESH AT”) (formerly Global Advanced Packaging Technology Limited, incorporated in Shanghai in 1990), which is engaged in the packaging and testing of semiconductors, and holds a 100% ownership interest in Wei Yu Hong Xin Semiconductors Inc. (“Wei Yu Hong Xin”). As of December 31, 2007, Wei Yu Hong Xin was in the development stage; and
- 2) 100% ownership interest in ASE Assembly & Test (H.K.) Limited (formerly Global Advanced Packaging Technology (H.K.) Limited, incorporated in Hong Kong in September 2001), which is a holding company that holds a 100% ownership interest in Global Advanced Packaging Technology North America Inc., which is

engaged in customer service and is in the process of liquidation.

Table of Contents

2. SIGNIFICANT ACCOUNTING POLICIES

The accompanying consolidated financial statements have been prepared in conformity with the Guidelines Governing the Preparation of Financial Reports by Securities Issuers, Business Accounting Law, Guidelines Governing Business Accounting, and accounting principles generally accepted in the Republic of China (“ROC GAAP”). Under these law, guidelines and principles, the Company should reasonably estimate the amounts of allowances for doubtful accounts, sales discounts and inventory valuations, depreciation of property, plant, and equipment, losses on impairment of assets, pension expenses, gains or losses on valuation of financial instruments and valuation allowances for deferred income tax assets. Actual results may differ from these estimates. Significant accounting policies are summarized as follows:

Basis of Presentation

The Company prepares its consolidated financial statements pursuant to ROC GAAP with reconciliation to accounting principles generally accepted in the United States of America (“U.S. GAAP”) (Note 31). The accompanying consolidated balance sheets are presented as of December 31, 2006 and 2007, and the accompanying consolidated statements of operations, changes in shareholders’ equity and cash flows are presented for each of the three years in the period ended December 31, 2007.

Basis of Consolidation

The consolidated financial statements include the accounts of ASE Inc. and all of the aforementioned subsidiaries. All significant intercompany accounts and transactions are eliminated upon consolidation.

Current and Noncurrent Assets and Liabilities

Current assets include cash and those assets held primarily for trading purposes or to be realized, sold or consumed within one year from the balance sheet date. Current liabilities are obligations incurred for trading purposes or to be settled within one year from the balance sheet date. Assets and liabilities that are not classified as current are classified as noncurrent assets and liabilities, respectively.

Financial Assets/Liabilities at Fair Value through Profit or Loss

Financial instruments classified as financial assets or financial liabilities at fair value through profit or loss (“FVTPL”) include financial assets or financial liabilities held for trading. The Company recognizes a financial asset or financial liability on its balance sheet when the Company becomes a party to the contractual provisions of the financial instrument. A financial asset is derecognized when the Company has lost control of its contractual rights over the financial asset. A financial liability is derecognized when the obligation specified in the relevant contract is discharged, cancelled or expired.

Financial instruments at FVTPL are initially measured at fair value. Transaction costs directly attributable to the acquisition of financial assets at FVTPL are recognized immediately in profit or loss. At each balance sheet date subsequent to initial recognition, financial assets or financial liabilities at FVTPL are remeasured at fair value, with changes in fair value recognized directly in profit or loss in the year in which they arise. On derecognition of a financial asset or a financial liability, the difference between its carrying amount and the sum of the consideration received and receivable or consideration paid and payable is recognized in profit or loss. A regular way purchase or sale of financial assets is recognized and derecognized on a settlement date basis.

A derivative that does not qualify for hedge accounting is classified as a financial asset or a financial liability held for trading. If the fair value of the derivative is positive, the derivative is recognized as a financial asset; otherwise, the derivative is recognized as a financial liability.

Fair values of open-ended mutual funds and derivatives with no quoted price in an active market are estimated using the net asset value and valuation techniques, respectively.

F-15

Table of Contents

Available-for-sale Financial Assets

Available-for-sale financial assets are initially recognized at fair value plus transaction costs that are directly attributable to the acquisition. Changes in fair value of financial assets are reported in a separate component of shareholders' equity. The corresponding accumulated gains or losses are recognized in earnings when the financial asset is derecognized from the balance sheet. A regular way purchase or sale of financial assets is recognized and derecognized on a settlement date basis.

The recognition and derecognition bases of available-for-sale financial assets are similar to those of financial assets at FVTPL.

Fair values of open-ended mutual funds and publicly traded stocks are determined using the net asset value and closing-price at the balance sheet date, respectively.

If certain objective evidence indicates that an available-for-sale financial asset is impaired, a loss is recognized currently; if, in a subsequent period, the amount of the impairment loss decreases, for equity securities, the previously recognized impairment loss is reversed to the extent of the decrease and recorded as an adjustment to shareholders' equity.

Revenue Recognition, Allowance for Doubtful Accounts and Allowance for Sales Discounts

Revenues from semiconductor packaging and testing services are recognized upon completion of the services or shipment. The Company does not take ownership of: (i) bare semiconductor wafers received from customers that the Company packages into finished semiconductors and (ii) packaged semiconductors received from customers that the Company tests as to whether they meet certain performance specifications. The title and risk of loss remain with the customer for those bare semiconductors and/or packaged semiconductors. Accordingly, the costs of customer-supplied semiconductor materials are not included in the accompanying consolidated financial statements. Other criteria the Company uses to determine when to recognize revenue are: (i) existence of persuasive evidence of an arrangement, (ii) the selling price is fixed or determinable and (iii) collectibility is reasonably assured.

Revenues are determined using the fair value taking into account related sales discounts agreed to by the Company and customers. Since the receivables from sales are collectible within one year and such transactions are frequent, the fair value of receivables is equivalent to the nominal amount of cash received or receivable.

An allowance for doubtful accounts is provided based on an evaluation of the collectibility of receivables. The Company determines the amount of the allowance for doubtful accounts by examining the aging analysis of the outstanding accounts receivable and current trends in the credit quality of its customers. An allowance for sales discounts is recognized based on historical experience in the same period sales are recognized.

Accounts Receivable Securitization

Accounts receivable securitization is the transfer of a designated pool of accounts receivable to a bank which in turn issues beneficial securities or asset-backed securities based on the accounts receivable. Under the ROC Statement of Financial Accounting Standards ("ROC SFAS") No. 33, "Accounting for Transfers of Financial Assets and Extinguishments of Liabilities", such transfer of financial assets in which the transferor surrenders control over those assets is accounted for as a sale to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The difference between the book value of accounts receivable and total proceeds received is recorded as a gain or loss on the disposal of financial assets.

F-16

Table of Contents

Inventories

Inventories including raw materials (materials received from customers for processing, mainly semiconductor wafers, are excluded from inventories as title and risk of loss remain with the customers), supplies and spare parts, work in process, finished goods, supplies in transit and construction in progress are stated at the lower of cost or market value. Market value represents net realizable value for finished goods, work in process and construction in progress, and replacement costs for raw materials, supplies and spare parts.

Raw materials, supplies and spare parts are recorded at moving average cost; work in process and finished goods are recorded at standard cost and adjusted to the approximate weighted average cost at the balance sheet date. Estimated losses on obsolescence and slow-moving items are recognized and included in the allowance for losses.

Construction in progress for the Company's real estate developer is accounted for using the completed-contract method.

Held-to-maturity Financial Assets

Held-to-maturity financial assets are carried at amortized cost using the effective interest method. Those financial assets are initially measured at fair value plus transaction costs that are directly attributable to the acquisition. Gains or losses are recognized when the financial assets are derecognized, impaired or amortized.

If certain objective evidence indicates that a held-to-maturity financial asset is impaired, a loss is recognized currently. If, in a subsequent period, the amount of the impairment loss decreases and the decrease is clearly attributable to an event which occurred after the impairment loss was recognized, the previously recognized impairment loss is reversed to the extent of the decrease. The reversal may not result in a carrying amount that exceeds the amortized cost that would have been determined as if no impairment loss had been recognized.

Financial Assets Carried at Cost

Investments, such as non-publicly traded stocks that do not have a quoted market price in an active market and whose fair value cannot be reliably measured, are carried at their original cost. If certain objective evidence indicates that such a financial asset is impaired, a loss is recognized. A subsequent reversal of such impairment loss is not allowed.

Cash dividends are recognized as investment income on the declaration date. Stock dividends which are not recognized as investment income are recorded as an increase in the number of shares held and the cost per share is recalculated based on the new total number of shares.

Equity Method Investments

Investments in companies of which the Company owns at least 20% of the outstanding voting shares or where the Company exercises significant influence over the investee companies' operating and financial policy decisions are accounted for using the equity method. Prior to January 1, 2006, the difference between the acquisition cost and the Company's proportionate share in the investee's equity was amortized by the straight-line method over 10 years. Effective January 1, 2006, pursuant to the revised ROC SFAS No. 5, "Long-term Investments under Equity Securities" ("ROC SFAS No. 5"), the acquisition cost is analyzed, and the acquisition cost in excess of the Company's share of the fair value of the identifiable net assets acquired is recognized as goodwill. Such goodwill is not amortized but instead is tested for impairment annually or whenever there are indications that the investments are impaired.

When the Company subscribes for additional investees' shares at a percentage different from its existing ownership percentage, the resulting carrying amount of the investment in the investees differs from the amount of the Company's share in the investee's net equity. The Company records such a difference as an adjustment to equity method investments with the corresponding amount charged or credited to capital surplus.

F-17

Table of Contents

Gains or losses on sales between the Company and equity method investees are deferred in proportion to the Company's ownership percentage in the investees until such gains or losses are realized through transactions with third parties. Gains or losses on sales between equity method investees are deferred in proportion to the product of the Company's ownership percentages in the investees until they are realized through transactions with third parties.

At the balance sheet date, the Company tests investments for impairment. When an impairment is identified, the carrying amount of the investments is reduced, with the related impairment loss recognized in earnings.

Property, Plant and Equipment

Property, plant and equipment are stated at cost less accumulated depreciation and accumulated impairment. Equipment held under capital leases is recorded as an asset and an obligation at an amount equal to the lower of: (i) the present value at the beginning of the lease term of the minimum lease payments during the lease term (including the payment called for under any bargain purchase option); or (ii) fair value of the leased equipment at the inception of the lease. Machinery in transit, construction in progress and prepayments are stated at cost. These include the cost of machinery, construction, down payments and other direct costs plus interest charges attributable to the borrowings used to finance the acquisitions of these assets. Major overhaul and improvements are capitalized, while maintenance and repairs are expensed as incurred.

Depreciation is computed using the straight-line method over estimated service life, which ranges as follows: buildings and improvements, 3 to 55 years; machinery and equipment, 1 to 10 years; furniture and fixtures, 2 to 15 years; transportation equipment, 1 to 10 years; and leased assets and leasehold improvements, 3 to 5 years. In the event that an asset which has been depreciated to its residual value is still in service, its residual value is further depreciated over its re-estimated service life.

When property, plant and equipment are retired or disposed of, their cost and accumulated depreciation are removed from the accounts and any gain or loss is credited or charged to non-operating income or losses.

Intangible Assets

Patents are recorded at cost and amortized using the straight-line method over estimated useful life. Land use rights are amortized over the contract terms of 50 to 60 years.

Goodwill

Goodwill represents the excess of the consideration paid for an acquisition over the fair value of identifiable net assets acquired. Prior to January 1, 2006, goodwill was amortized on a straight-line basis over the estimated life of 10 years. Effective January 1, 2006, pursuant to the newly revised ROC SFAS No. 25, "Business Combinations-Accounting Treatment under Purchase Method" ("ROC SFAS No.25"), goodwill is no longer amortized and instead is tested for impairment annually.

The Company evaluates whether its goodwill is impaired on an annual basis. If the carrying amount of goodwill is determined to exceed its recoverable amount, an impairment loss is recognized at an amount equal to that excess. A reversal of such impairment loss is prohibited.

Idle Assets

Idle assets are stated at the lower of their fair value or carrying amount. The carrying amount in excess of the fair value is recognized as an impairment loss. The remaining book value is depreciated using the straight-line method.

F-18

Table of Contents

Asset Impairment

The Company evaluates whether or not there are indications that assets (primarily property, plant and equipment, intangible assets, and long-term investments) may be impaired as of the balance sheet date. If there are indications, the Company estimates the recoverable amount for the asset. If an asset's recoverable amount is lower than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount by recording an impairment loss. When the recoverable amount subsequently increases, the impairment loss previously recognized is reversed and recorded as a gain. However, the carrying amount of an asset (other than goodwill) after the reversal of the impairment loss should not exceed the carrying amount of the asset that would have been determined, net of depreciation, as if no impairment loss had been recognized.

Deferred Charges

Deferred charges consist of certain intangibles and other assets, including license fees, telecommunications and computer network systems and bond issuance costs. Amortization of deferred charges is computed on a straight-line basis over 2 to 5 years.

Pension Cost

Pension cost under defined benefit plans are determined by actuarial valuations.

Contributions made under defined contribution plans are recognized as pension cost during the period in which employees render services.

Convertible Bonds

Prior to the adoption of ROC SFAS No. 34 and No. 36 on January 1, 2006, convertible bonds were recorded as a financial liability. The stated redemption price in excess of the face value of the bond is recognized as interest expense over the period from the issuance date to the date the put option becomes exercisable, using the effective interest rate method. If the market price of the common shares into which the bonds are convertible is higher than the redemption price at the time the put option becomes exercisable, the related accrued interest is transferred to capital surplus. Conversion of convertible bonds into common shares is accounted for by the book value method. Under this method, unamortized bond issuance costs and accrued interest, together with face value of converted bonds, are written off, and the common shares issued are recorded at their par value, with any excess recorded as capital surplus. No change in accounting treatment was required for convertible bonds after the adoption of ROC SFAS No. 34 and No. 36.

Employee Stock Options

All stock-based compensation for awards granted or modified after January 1, 2004 is accounted for by the related interpretations of the Accounting Research and Development Foundation ("ARDF") in the ROC. The Company recognizes compensation cost based on the intrinsic value method, whereby the compensation cost for stock options is measured as the excess, if any, of the quoted market price of the stock at the date of the grant over the amount an employee must pay to acquire the stock. The intrinsic value of the options is recognized as expense over the requisite service or vesting period.

Treasury Stock

The Company's shares held by its subsidiaries are accounted for as treasury stock and, accordingly, the cost of such shares is reclassified from long-term investments to treasury stock upon consolidation.

F-19

Table of Contents

Research and Development Costs

Research and development costs are charged to expenses as incurred.

Income Taxes

The Company applies intra-period and inter-period allocations for its income tax whereby (1) a portion of current income tax expense is allocated to the income from discontinued operations and the cumulative effect of changes in accounting principles; and (2) deferred income tax assets and liabilities are recognized for the tax effects of temporary differences, loss carryforwards and unused tax credits. Valuation allowances are provided to the extent, if any, that it is more likely than not that deferred income tax assets will not be realized. A deferred tax asset or liability is classified as current or noncurrent in accordance with the classification of its related asset or liability. However, if a deferred tax asset or liability does not relate to an asset or liability in the financial statements, then it is classified as either current or noncurrent based on the expected length of time before it is realized or settled.

Any tax credits arising from purchases of machinery, equipment and technology, research and development expenditures, and personnel training expenditures are recognized using the flow-through method.

Adjustments of prior years' income tax are added to or deducted from the current year's tax provision.

Income tax on undistributed earnings is recorded by ASE Inc. and subsidiaries under jurisdiction of ROC at the rate of 10% and is recorded as an expense in the year shareholders' resolve the distribution of earnings.

Foreign Currency Transactions and Translation of Foreign-currency Financial Statements

The functional and reporting currency of the Company is the New Taiwan dollar, while the functional currencies of its major subsidiaries are their local currencies, namely, the U.S. dollar, Japanese yen, Korea Won, Renminbi and Malaysia Ringgit, respectively.

Non-derivative foreign currency transactions are recorded in local currencies at the rates of exchange in effect when the transactions occur. Exchange differences arising from settlement of foreign-currency assets and liabilities are recognized in profit or loss.

At the balance sheet date, foreign-currency monetary assets and liabilities are revalued using prevailing exchange rates and the exchange differences are recognized in profit or loss.

At the balance sheet date, foreign-currency nonmonetary assets (such as equity instruments) and liabilities that are measured at fair value are revalued using prevailing exchange rates, with the exchange differences treated as follows:

- a. Recognized in shareholders' equity if the changes in fair value are recognized in shareholders' equity;
- b. Recognized in profit or loss if the changes in fair value is recognized in profit or loss.

If an investee's functional currency is a foreign currency, translation adjustments will result from the translation of the investee's financial statements into the reporting currency of the Company. Such adjustments are accumulated and reported as a separate component of shareholders' equity.

The financial statements of foreign subsidiaries are translated into New Taiwan dollars at the following exchange rates: Assets and liabilities – spot rates at the end of year; shareholders' equity – historical rates; income and expenses – average rates during the year. The resulting translation adjustments are recorded as a separate component of shareholders' equity.

F-20

Table of Contents

Derivative Financial Instruments for Hedging

Derivatives that qualify as effective hedging instruments are measured at fair value, with subsequent changes in fair value recognized in profit or loss, or in shareholders' equity, depending on the nature of the hedging relationship.

Hedge Accounting

Hedge accounting recognizes in profit or loss the offsetting effects of changes in fair values of the hedging instrument and the hedged item as follows:

a. Fair value hedge

The gain or loss from remeasuring the hedging instrument at fair value and the gain or loss on the hedged item attributable to the hedged risk are recognized in profit or loss.

b. Cash flow hedge

The portion of the gain or loss on the hedging instrument that is determined to be an effective hedge is recognized in shareholders' equity. The amount recognized in shareholders' equity is recognized in profit or loss in the same year or years during which the hedged forecast transaction or an asset or liability arising from the hedged forecast transaction affects profit or loss. However, if all or a portion of a loss recognized in shareholders' equity is not expected to be recovered in the future, the amount that is not expected to be recovered is reclassified into profit or loss.

Recent Accounting Pronouncements

In March 2007, the ARDF issued an interpretation that requires ROC companies to recognize compensation expenses for bonuses paid to employees, directors and supervisors beginning January 1, 2008. Such bonuses are currently recorded as appropriations of earnings under ROC GAAP. Based on management's reasonable estimate, the Company believes that the adoption of this standard will result in a charge to earnings of approximately 10% to 12% of the net income for 2008. However, the actual percentage to be paid in profit sharing bonuses is subject to the approval of the Company's shareholders.

The ARDF also issued ROC SFAS No. 39, "Share-based Payment" ("ROC SFAS No. 39") in August 2007, which requires ROC companies to record share-based payment transactions in the financial statements at fair value. ROC SFAS No. 39 should be applied to financial statements for fiscal years beginning on or after January 1, 2008. The Company will recognize compensation expense if the Company grants new options or revises the existing option plans on or after January 1, 2008.

The ARDF revised ROC SFAS No. 10, "Inventories" ("ROC SFAS No. 10") in November 2007, which requires inventories to be stated at the lower of cost or net realizable value item by item. Inventories are recorded by the specific identification method, first-in, first-out method or weighted average method. The last-in, first-out method is no longer permitted. The revised ROC SFAS No. 10 should be applied to financial statements for fiscal years beginning on or after January 1, 2009. Early adoption is permitted. The Company is currently evaluating the effect that the adoption of the revised ROC SFAS No. 10 will have on the results of operations and financial position of the Company, and is not yet in a position to determine such effect.

U.S. Dollar Amounts

The Company prepares its consolidated financial statements in New Taiwan dollars. A translation of the 2007 financial statements into U.S. dollars is included solely for the convenience of the reader, and has been based on the U.S. Federal Reserve Bank of New York noon buying rate of NT\$32.43 to US\$1.00 in effect on December 31, 2007. The translation should not be construed as a representation that the New Taiwan dollar amounts have been, could have been, or could in the future be, converted into U.S. dollars at this or any other rate of exchange.

F-21

Table of Contents

Reclassifications

Certain accounts in the consolidated financial statements as of December 31, 2006 and for the years ended December 31, 2005 and 2006 have been reclassified to conform to the classifications of the consolidated financial statements as of and for the year ended December 31, 2007.

3. ACCOUNTING CHANGE

Adoption of New and Revised Standards

On January 1, 2007, the Company adopted the newly released ROC SFAS No. 37, "Intangible Assets" and ROC SFAS No. 38, "Non-current Assets Held for Sale and Discontinued Operations". The adoption of ROC SFAS No. 37 and ROC SFAS No. 38 had no impact on the results of operations and financial position of the Company.

On January 1, 2006, the Company adopted the newly released ROC SFAS No. 34, "Financial Instruments: Recognition and Measurement" and No. 36, "Financial Instruments: Disclosure and Presentation" and revisions of previously released ROC SFAS No. 5 and No. 25.

a. Effect of adopting the newly released SFASs and revisions of previously released SFASs

- 1) The Company categorized its financial assets and liabilities upon the initial adoption of the newly released ROC SFAS No. 34 and No. 36. The adjustments made to the carrying amounts of the financial instruments categorized as financial assets or liabilities at FVTPL were included in the cumulative effect of changes in accounting principles; and the adjustments made to the carrying amounts of those categorized as available-for-sale financial assets were recognized as adjustments to shareholders' equity.

Deferred exchange losses for cash flow hedges were reclassified as adjustments to shareholders' equity.

The effect of adopting the newly released SFASs is summarized as follows:

| | Recognized as Cumulative Effect of Changes in Accounting Principles (Net of income tax) NT\$ | Recognized as a Separate Component of Shareholders' Equity (Net of income tax) NT\$ |
|--|---|--|
| Financial assets at FVTPL | 503 | - |
| Financial liabilities at FVTPL | (343,006) | - |
| Derivative financial liabilities for hedging | - | (129,179) |
| | (342,503) | (129,179) |

In addition to the effect shown above, the adoption of ROC SFAS No. 34 and No. 36 also resulted in an increase in net income before cumulative effect of changes in accounting principles of NT\$242,961 thousand, a decrease in net

income of NT\$99,542 thousand (net of income tax effect of NT\$33,181 thousand), and a decrease in basic earnings per share (after income tax) of NT\$0.02 for the year ended December 31, 2006.

F-22

Table of Contents

2)The Company adopted the newly revised ROC SFAS No. 5 and No. 25, which prescribe that investment premiums, representing goodwill, not be amortized and instead be assessed for impairment at least on an annual basis. This change resulted in an increase in net income before cumulative effect of changes in accounting principles of NT\$619,397 thousand and an increase in basic earnings per share (after income tax) of NT\$0.12 for the year ended December 31, 2006.

4. CASH

| Cross currency swap contracts | 274,421 | 7,519 | 231 |
| | 352,583 | 44,331 | 1,367 |

The Company entered into derivative contracts during the years ended December 31, 2006 and 2007 to manage exposures to foreign exchange and interest rate risk.

Information on such derivative transactions is as follows:

a. Interest rate swap contract

As of December 31, 2006 and 2007, the notional amount of the outstanding contract was NT\$2,750,000 thousand. Interest receipt and payment were based on floating rates semi-annually. The maturity date of the contract is January 9, 2009.

F-23

Table of Contents

b. Forward exchange contracts

The outstanding forward exchange contracts at December 31, 2006 and 2007 were as follows:

| Currency | Maturity Date | Contract Amount (in Thousands) |
|-------------------|-----------------------|-----------------------------------|
| December 31, 2006 | | |
| USD/JPY | 2007.01.09-2007.03.22 | USD23,300/JPY2,718,849 |
| USD/NTD | 2007.01.11-2007.03.01 | USD69,000/NTD2,229,074 |
| USD/KRW | 2007.01.09-2007.02.09 | USD13,000/KRW12,408,440 |
| December 31, 2007 | | |
| USD/JPY | 2008.01.10-2008.03.24 | USD16,000/JPY1,783,727 |
| USD/NTD | 2008.01.07-2008.03.28 | USD190,000/NTD6,130,684 |
| USD/KRW | 2008.01.28 | USD5,000/KRW4,697,500 |
| USD/MYR | 2008.01.08-2008.02.12 | USD8,000/MYR26,594 |
| NTD/USD | 2008.01.22-2008.02.12 | NTD483,050/USD15,000 |

c. Cross-currency swap contracts

The Company entered into cross-currency swap contracts with banks to manage its exposure to interest rate and exchange rate fluctuations associated with its long-term bonds payable. The outstanding contracts at December 31, 2006 and 2007 were as follows:

| Maturity Date | Contract Amount (in Thousands) | Interest Payment | Interest Receipt |
|-------------------|-----------------------------------|------------------|------------------|
| December 31, 2006 | | | |
| 2007.10.22 | USD 142,000 | 1.7% | 2.7% |
| December 31, 2007 | | | |
| 2008.01.24 | USD 139,159 | 1.7% | 4.45% |

d. Interest rate swaption contract

In April 2004, the Company entered into an interest rate swaption contract which was to expire in October 2007. The terms of the contract provided that if the interest rate (USD 6 Month LIBOR at 11 a.m. London time and set on London Business Days) ever reached 5 % before the expiration of the contract, the interest to be paid to the bank during the contract period would be calculated based on the arrangement of the revised contract on the notional amount of US\$157,000 thousand. The contract was terminated in March 2006.

For the years ended December 31, 2005, 2006 and 2007, the gain on valuation of financial assets held for trading was, NT\$0, NT\$29,278 thousand and NT\$205,997 thousand (US\$6,352 thousand), respectively; the gain (loss) on valuation of financial liabilities held for trading was NT\$20,919 thousand, NT\$(289,847) thousand and NT \$(28,583) thousand (US\$881 thousand), respectively.

Table of Contents

In November 2005, ASE Inc. and ASE Test Inc. entered into a three-year revolving accounts receivable securitization agreement with a bank for US\$100 million. The credit line was increased to US\$200 million in June 2006. The agreement was early terminated in December 2007.

Under the agreement, ASE Inc. and ASE Test Inc. transferred a pool of accounts receivable to the bank, which issued securities backed by these accounts receivable. Proceeds received from the bank were the net book value of the pool of accounts receivable, less a deferred purchase price receivable at 20% of the accounts receivable sold, guarantee deposit, program fee and other related expenses. The Company surrendered control of these accounts receivable at the time of transfer to the bank, and therefore the transaction was accounted for as a sale of accounts receivable, for which the book value of the accounts receivable was derecognized and the difference between the book value and the proceeds received was recorded as a non-operating loss. Losses from sale of receivables were NT\$13,374 thousand, NT\$235,509 thousand and NT\$151,746 thousand (US\$4,679 thousand) in 2005, 2006 and 2007, respectively.

After the transfer of the accounts receivable, the Company continued to service, administer, and collect these accounts receivable on behalf of the bank. Collections not yet passed over to the bank amounted to NT\$2,378,464 thousand as of December 31, 2006 and were included in temporary receipts. Total accounts receivable sold was NT\$4,608,182 thousand as of December 31, 2006.

8. INVENTORIES

| | December 31 2006 NT\$ | 2007 NT\$ | US\$ |
|---|-----------------------------|--------------|----------|
| Raw materials | 3,663,475 | 3,327,118 | 102,594 |
| Supplies and spare parts | 800,668 | 718,912 | 22,168 |
| Work in process | 526,680 | 763,236 | 23,535 |
| Finished goods | 609,982 | 699,197 | 21,560 |

F-27

Table of Contents

The market value of the publicly traded stocks was NT\$4,525,391 thousand and NT\$4,419,516 thousand (US\$136,279 thousand) as of December 31, 2006 and 2007, respectively.

The difference between the cost of investment and equity in investees' net assets as of December 31, 2006 and 2007 was as follows:

| | December 31 | | |
|-----------------------------------|-------------|-----------|---------|
| | 2006 | 2007 | |
| | NT\$ | NT\$ | US\$ |
| Goodwill | 371,436 | 371,436 | 11,453 |
| Unrealized sales profit | (277,315) | (269,512) | (8,310) |
| Deferred gain on transfer of land | (300,149) | (300,149) | (9,255) |
| | (206,028) | (198,225) | (6,112) |

The Company acquired shares of Universal Scientific Industrial Co., Ltd. ("USI") from the open market. As of December 31, 2007, the Company had made an accumulated investment of NT\$3,838,677 thousand (US\$118,368 thousand) and owned 18.7% of the outstanding shares. The Company continues to exercise significant influence over USI, therefore the investment was accounted for by the equity method. USI is engaged in the manufacturing, processing and sale of computer peripherals, integrated circuits, electrical parts, personal computers and related accessories. The difference between the cost of investment and the Company's share in the net equity of USI amounting to NT\$371,436 thousand is attributable to goodwill. Effective January 1, 2006, goodwill is no longer amortized and instead is tested for impairment at least annually.

The Company acquired shares of Hung Ching Development & Construction Co. ("HCDC") from the open market. As of December 31, 2007, the Company had made an accumulated investment of NT\$2,845,913 thousand (US\$87,756 thousand). HCDC is engaged in the development and management of commercial, residential and industrial real estate properties in Taiwan

The Company acquired a 27.3% equity interest in Hung Ching Kwan Co. ("HCKC") in 1992 by transferring to HCKC a parcel of land valued at NT\$390,470 thousand. The resulting gain of NT\$300,149 thousand, which represents the excess of such value over the cost of the land plus land value increment tax, has been deferred until the disposal of this investment.

As of December 31, 2007, Inprocomm, Inc. was in the process of liquidation and Intergrated Programmable Communication, Inc. had completed its liquidations.

The Company recorded equity in earnings of equity method investees of NT\$74,292 thousand, NT\$315,654 thousand and NT\$345,705 thousand (US\$10,660 thousand) in 2005, 2006 and 2007, respectively.

Information on long-term bonds payable is as follows:

a. Foreign convertible bonds

In September 2003, the Company issued US\$200,000 thousand of unsecured zero coupon convertible bonds due September 2008, consisting of 200,000 units with face value of US\$1,000 each. The bonds bear an implied interest rate of 3.75%. As of December 31, 2007, bonds amounting to US\$45,841 thousand were converted to common shares. In April 2005, the Company redeemed US\$15,000 thousand of the bonds. Outstanding convertible bonds were US\$185,000 thousand and US\$139,159 thousand as of December 31, 2006 and 2007, respectively.

From 31 days after the date of issuance through 10 days before the due date, bondholders have the right to convert the bonds into common shares or ADS of ASE Inc. at the specified conversion price. The conversion price is based on the market price at the time of issuance.

The Company may redeem the bonds at the early redemption price if:

- 1) On or at any time after September 2007, the closing price of the common shares for a period of 20 consecutive trading days is higher than 130% of the conversion price (NT\$26.59 per share on December 31, 2007) in effect on each such trading day;
- 2) At least 90% of the bonds have already been converted, redeemed, or purchased and cancelled; or
- 3) If the applicable tax law is unfavorably changed, the Company may redeem at any time all, but not some, of the bonds.

According to the stipulation of redemption, unless the bonds have been previously redeemed, repurchased and cancelled, or converted, bondholders shall have the right to require the Company to purchase for cash the bonds at 116.02% of their face value on September 25, 2007. The stipulation of redemption expired on September 25, 2007, on which date the closing price of the common shares into which the bonds are convertible was higher than the redemption price, and therefore all the accrued interest was transferred to capital surplus.

The bonds are due in September 2008; in addition, holders of the bonds have the right to request the redemption of the bonds on Sep
