Table of Contents

**DAWSON GEOPHYSICAL COMPANY
NOTES TO FINANCIAL STATEMENTS (UNAUDITED)**

1. ORGANIZATION AND NATURE OF OPERATIONS

Founded in 1952, the Company acquires and processes 2-D, 3-D and multi-component seismic data for its clients, ranging from major oil and gas companies to independent oil and gas operators as well as providers of multi-client data libraries.

2. OPINION OF MANAGEMENT

Although the information furnished is unaudited, in the opinion of management of the Company, the accompanying financial statements reflect all adjustments, consisting only of normal recurring accruals, necessary for a fair statement of the results for the periods presented. The results of operations for the three months and the nine months ended June 30, 2008 are not necessarily indicative of the results to be expected for the fiscal year.

Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted in this Form 10-Q report pursuant to certain rules and regulations of the Securities and Exchange Commission. These financial statements should be read with the financial statements and notes included in the Company's Form 10-K for the fiscal year ended September 30, 2007.

Critical Accounting Policies

The preparation of the Company's financial statements in conformity with generally accepted accounting principles requires that certain assumptions and estimates be made that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Because of the use of assumptions and estimates inherent in the reporting process, actual results could differ from those estimates.

Revenue Recognition. Services are provided under cancelable service contracts. These contracts are either turnkey or term agreements. Under both types of agreements, the Company recognizes revenues when revenue is realizable and services have been performed. Services are defined as the commencement of data acquisition or processing operations. Revenues are considered realizable when earned according to the terms of the service contracts. Under turnkey agreements, revenue is recognized on a per unit of data acquired rate as services are performed. Under term agreements, revenue is recognized on a per unit of time worked rate as services are performed. In the case of a cancelled service contract, revenue is recognized and the customer is billed for services performed up to the date of cancellation.

The Company receives reimbursements for certain out-of-pocket expenses under the terms of the service contracts. Amounts billed to clients are recorded in revenue at the gross amount including out-of-pocket expenses that are reimbursed by the client.

In some instances, customers are billed in advance of the services performed. In those cases, the Company recognizes the liability as deferred revenue.

Allowance for Doubtful Accounts. Management prepares its allowance for doubtful accounts receivable based on its review of past-due accounts, its past experience of historical write-offs and its current customer base. The inherent volatility of the energy industry's business cycle can cause swift and unpredictable changes in the financial stability of the Company's customers.

Impairment of Long-lived Assets. Long-lived assets are reviewed for impairment when triggering events occur suggesting deterioration in the assets' recoverability or fair value. Recognition of an impairment charge is required if future expected net cash flows are insufficient to recover the carrying value of the asset. Management's forecast of future cash flow used to perform impairment analysis includes estimates of future revenues and future gross margins based on the Company's historical results and analysis of future oil and gas prices which is fundamental in assessing demand for the Company's services. If the Company is unable to achieve these cash flows an impairment charge would be recorded.

Table of Contents

Depreciable Lives of Property, Plant and Equipment. Property, plant and equipment are capitalized at historical cost and depreciated over the useful life of the asset. Management's estimation of this useful life is based on circumstances that exist in the seismic industry and information available at the time of the purchase of the asset. As circumstances change and new information becomes available, these estimates could change.

Depreciation is computed using the straight-line method. When assets are retired or otherwise disposed of, the cost and related accumulated depreciation are removed from the balance sheet, and any resulting gain or loss is reflected in the results of operations for the period.

Tax Accounting. The Company accounts for income taxes in accordance with Statement of Financial Accounting Standards (SFAS) No. 109, Accounting for Income Taxes, which requires the recognition of amounts of taxes payable or refundable for the current year and an asset and liability approach in recognizing the amount of deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the Company's financial statements or tax returns. Management determines deferred taxes by identifying the types and amounts of existing temporary differences, measuring the total deferred tax asset or liability using the applicable tax rate and reducing the deferred tax asset by a valuation allowance if, based on available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized. Management's methodology for recording income taxes requires judgment regarding assumptions and the use of estimates, including determining the annual effective tax rate and the valuation of deferred tax assets, which can create variances between actual results and estimates and could have a material impact on the Company's provision or benefit for income taxes.

Stock-Based Compensation. The Company accounts for stock compensation in accordance with SFAS No. 123(R) (SFAS 123(R)), Share-Based Payment. SFAS 123(R) requires a company to measure all employee stock-based compensation awards using the fair value method and recognize compensation cost in its financial statements. The Company recognizes the fair value of stock-based compensation awards as operating or general and administrative expense as appropriate in the Statements of Operations on a straight-line basis over the vesting period. Compensation costs are not recognized for anticipated forfeitures prior to the vesting of equity instruments.

Recently Issued Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board (FASB) issued SFAS No. 157 (SFAS 157), Fair Value Measurements. SFAS 157 clarifies that fair value is the amount that would be exchanged to sell an asset or transfer a liability in an orderly transaction between market participants. Further, the standard establishes a framework for measuring fair value in generally accepted accounting principles and expands certain disclosures about fair value measurements. SFAS 157 is effective for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. In December 2007, the FASB provided a one-year deferral of SFAS 157 for non-financial assets and non-financial liabilities, except those that are recognized or disclosed at fair value on a recurring basis, at least annually. The Company does not expect the adoption of either part of SFAS 157 to have a material impact on its financial statements.

In February 2007, the FASB issued SFAS No. 159 (SFAS 159), The Fair Value Option for Financial Assets and Financial Liabilities. SFAS 159 provides companies with an option to report selected financial assets and liabilities at fair value. SFAS 159 is effective for fiscal years beginning after November 15, 2007. The Company is evaluating the impact of SFAS 159 on its financial statements.

In May 2008, the FASB issued SFAS No. 162 (SFAS 162), The Hierarchy of Generally Accepted Accounting Principles. Under SFAS 162, the GAAP hierarchy will now reside in the accounting literature established by the FASB. SFAS 162 identifies the sources of accounting principles and the framework for selecting the principles used in the preparation of financial statements in conformity with GAAP. SFAS 162 is effective 60 days following the SEC's approval of the Public Accounting Oversight Board Auditing amendments to AU Section 411, The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles. The Company does not expect the adoption of SFAS 162 to have a material impact on its financial statements.

Table of Contents**3. DEBT**

The Company's revolving line of credit loan agreement is with Western National Bank. In January 2008, the Company renewed the agreement for an additional year. On June 2, 2008, the agreement was amended to permit the Company to borrow, repay and reborrow, from time to time until June 2, 2009, up to \$40.0 million, up from \$20.0 million under the previous facility. The Company's obligations under this agreement are secured by a security interest in the Company's accounts receivable, equipment and related collateral. Interest accrues under the facility at an annual rate equal to either the 30-day London Interbank Offered Rate (LIBOR), plus two and one-quarter percent or the Prime Rate, minus three-quarters percent as the Company shall choose monthly. Beginning July 1, 2008, the interest rate shall not be less than 4%. Interest on the outstanding amount under the loan agreement is payable monthly. The loan agreement contains customary covenants for credit facilities of this type, including limitations on disposition of assets, mergers and reorganizations. The Company is also obligated to meet certain financial covenants under the loan agreement including maintaining specified ratios with respect to cash flow coverage, current assets and liabilities, and debt to tangible net worth. The Company was in compliance with all covenants as of June 30, 2008 and August 1, 2008. On July 5, 2007, the Company borrowed \$5.0 million under the prior loan agreement for working capital purposes. This amount was renewed and extended under the new loan agreement. On March 21, 2008, the Company borrowed an additional \$5.0 million, and on June 14, 2008, the Company borrowed an additional \$10.0 million, in each case, for working capital purposes.

4. STOCK-BASED COMPENSATION

The Company's stock-based compensation activity for the nine months ended June 30, 2008 and 2007 is summarized below.

Incentive Stock Options:

The Company estimates the fair value of each stock option on the date of grant using the Black-Scholes option pricing model. The expected volatility is based on historical volatility over the expected vesting term of 48 months. As the Company has not historically declared dividends, the dividend yield used in the calculation is zero. Actual value realized, if any, is dependent on the future performance of the Company's common stock and overall stock market conditions. There is no assurance the value realized by an optionee will be at or near the value estimated by the Black-Scholes model. Options granted by the Company vest in equal installments annually over four years from the date of the grant, and the options expire five years from the date of grant. Compensation cost is recognized as the options vest.

No options were granted during the nine months ended June 30, 2008 or 2007. The total intrinsic value of options exercised during the nine months ended June 30, 2008 and 2007 was \$389,000 and \$2,425,000 for 6,500 and 71,500 shares, respectively.

Stock options issued under the Company's stock-based compensation plans are incentive stock options. No tax deduction is recorded when options are awarded. If an exercise and sale of vested options results in a disqualifying disposition, a tax deduction for the Company occurs. For the nine months ended June 30, 2008 and 2007 there were \$104,000 and \$583,000, respectively, in excess tax benefits from disqualifying dispositions of options.

The Company recognized compensation expense of \$59,000 and \$27,000 during the nine months ended June 30, 2008 and 2007, respectively, associated with stock option awards. This amount is included in wages in the Statements of Operations.

Stock Awards:

The Company granted 59,000 restricted shares during the first quarter of fiscal 2007, of which 56,000 were outstanding as of September 30, 2007 and June 30, 2008 due to the forfeiture of 3,000 shares on March 30, 2007. The grant date fair value of these fiscal 2007 awards was \$27.05. No restricted shares were granted during the second or third quarter of fiscal 2007 or during the first quarter of fiscal 2008. The Company granted 5,500 restricted shares during the second quarter of fiscal 2008. The grant date fair value of these awards was \$55.22. The Company granted 33,000 restricted shares during the third quarter of fiscal 2008. The grant date fair value of these awards was \$69.22 for 32,000 of the shares and \$70.46 for the remaining 1,000 shares. The fair value of the restricted stock granted equals the market price on the grant date. The restricted shares vest after three years.

The Company's tax benefit with regards to restricted stock awards is consistent with the tax election of the recipient of the award. No elections under IRC Section 83(b) were made for the restricted stock awards granted during fiscal 2007 or to date in fiscal 2008.

Table of Contents

As a result, the compensation expense recorded for restricted stock resulted in a deferred tax asset for the Company equal to the tax effect of the amount of compensation expense recorded.

The Company recognized compensation expense of \$449,000 in the first nine months of fiscal 2008 and \$328,000 in the first nine months of fiscal 2007 related to restricted stock awards. This amount is included in wages in the Statements of Operations.

The Company granted 3,000 shares with immediate vesting to outside directors in the first quarters of both fiscal 2008 and 2007 as compensation. The grant date fair value equaled \$69.64 and \$39.77 in each quarter, respectively. The Company granted 2,000 shares with immediate vesting to employees as compensation during the second quarter of fiscal 2008. The grant date fair value equaled \$55.22. The Company granted 500 and 1,000 shares with immediate vesting to employees as compensation during the third quarter of fiscal 2008. The grant date fair value equaled \$69.22 and \$70.46, respectively. No shares with immediate vesting were granted during the second or third quarters of fiscal 2007.

The Company recognized compensation expense, as well as the related tax benefit associated with these awards of \$424,000 in the first nine months of fiscal 2008 and \$119,000 in the first nine months of fiscal 2007 related to stock awards. This amount is included in wages in the Statements of Operations.

5. CONTINGENCY

On March 14, 2008, a wildfire in West Texas burned a remote area in which one of the Company's data acquisition crews was operating. The fire destroyed approximately \$3.8 million net book value of the Company's equipment, all of which was covered by the Company's liability insurance, net of the deductible. In addition to the loss of equipment, a number of landowners in the fire area suffered damage to their grazing lands, livestock, fences and other improvements. The Company continues discussions with the landowners regarding these losses. The Company currently estimates the likely amount of the landowner damages will be less than \$1.5 million. The Company believes any damages paid will be covered by the Company's liability insurance.

From time to time the Company is a party to various legal proceedings arising in the ordinary course of business. Although the Company cannot predict the outcomes of any such legal proceedings, management believes that the resolution of pending legal actions will not have a material adverse effect on the Company's financial condition, results of operations or liquidity as the Company believes it is adequately indemnified and insured.

The Company has non-cancelable operating leases for office space in Midland, Houston, Denver, Oklahoma City and Lyon Township, Michigan.

The following table summarizes payments due in specific periods related to our contractual obligations with initial terms exceeding one year as of June 30, 2008:

	Total	Payments Due by Period (\$000)			
		Within	1-3 Years	3-5 Years	After 5 Years
Operating lease obligations	\$1,723	\$491	\$946	\$286	\$

Some of the Company's operating leases contain predetermined fixed increases of the minimum rental rate during the initial lease term. For these leases, the Company recognizes the related expense on a straight-line basis and records the difference between the amount charged to expense and the rent paid as deferred rent. Rental expense under the Company's operating leases with initial terms exceeding one year was \$388,000 and \$301,000 for the nine months ended June 30, 2008 and 2007, respectively, and \$126,000 for the quarter ended June 30, 2008 as compared to \$119,000 for the quarter ended June 30, 2007.

As of June 30, 2008, the Company had unused letters of credit totaling \$2,930,000. The Company's letters of credit principally back obligations associated with the Company's self-insured retention on workers' compensation claims.

6. ADOPTION OF FIN 48

In July 2006, the FASB issued Interpretation No. 48 (FIN 48), Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109, which became effective for the Company on October 1, 2007. FIN 48 prescribes a recognition threshold

Table of Contents

and a measurement attribute for the financial statement recognition and measurement of tax positions taken or expected to be taken in a tax return. For those benefits to be recognized, a tax position must be more likely than not to be sustained upon re-examination by taxing authorities. The amount recognized is measured as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate settlement. As a result of the adoption of FIN 48, the Company recorded a liability of approximately \$207,000, which was accounted for as a reduction to retained earnings as of October 1, 2007. The liability included \$137,000 in taxes and \$70,000 in penalties and interest.

The following presents a roll forward of the Company's unrecognized tax benefits:

	Unrecognized Tax Benefits
Balance as of October 1, 2007	\$ 137,000
Increase (decrease) in prior year tax positions	
Increase (decrease) in current year tax positions	
Settlement with taxing authorities	
Expiration of statutes of limitations	(2,000)
Balance as of June 30, 2008	\$ 135,000

As of June 30, 2008 the Company has recognized \$220,000 of liabilities for unrecognized tax benefits of which \$85,000 related to penalties and interest.

Interest and penalty costs related to income taxes are classified as income tax expense. The tax years generally subject to future examination by tax authorities are for years ending September 30, 2004 and after. While it is expected that the amount of unrecognized tax benefits will change in the next twelve months, the Company does not expect any change to have a significant impact on its results of operations. The recognition of unrecognized tax benefits would have an immaterial effect on the effective tax rate.

7. NET INCOME PER COMMON SHARE

The Company accounts for earnings per share in accordance with SFAS No. 128 (SFAS 128), Earnings per Share. Basic net income per share is computed by dividing the net income for the period by the weighted average number of common shares outstanding during the period. Diluted net income per share is computed by dividing the net income for the period by the weighted average number of common shares and common share equivalents outstanding during the period.

The following table sets forth the computation of basic and diluted net income per common share:

	Three Months Ended June 30,		Nine Months Ended June 30,	
	2008	2007	2008	2007
NUMERATOR:				
Net income and numerator for basic and diluted net income per common share-income available to common shareholders	\$ 9,707,000	\$ 7,561,000	\$ 25,703,000	\$ 18,364,000
DENOMINATOR:				
Denominator for basic net income per common share-weighted average common shares	7,668,651	7,622,755	7,665,253	7,589,022
Effect of dilutive securities-employee stock options and restricted stock grants	64,425	72,616	61,952	71,031
	7,733,076	7,695,371	7,727,205	7,660,053

Denominator for diluted net income per
common share-adjusted weighted average
common shares and assumed conversions

Net income per common share	\$	1.27	\$	0.99	\$	3.35	\$	2.42
Net income per common share-assuming dilution	\$	1.26	\$	0.98	\$	3.33	\$	2.40

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion should be read in conjunction with the Company's financial statements and notes thereto included elsewhere in this Form 10-Q.

Forward Looking Statements

All statements other than statements of historical fact included in this Form 10-Q, including without limitation, statements under Management's Discussion and Analysis of Financial Condition and Results of Operations regarding technological advancements and our financial position, business strategy and plans and objectives of our management for future operations, are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. When used in this Form 10-Q, words such as "anticipate", "believe", "estimate", "expect", "intend", and similar expressions, as they relate to us or our management, identify forward-looking statements. Such forward-looking statements are based on the beliefs of our management as well as assumptions made by and information currently available to management. Actual results could differ materially from those contemplated by the forward-looking statements as a result of certain factors, including but not limited to dependence upon energy industry spending, the volatility of oil and gas prices, high fixed costs of operations, weather interruptions, inability to obtain land access rights of way, operational disruptions, industry competition, the ability to manage growth, and the availability of capital resources. A discussion of these factors, including risks and uncertainties, is set forth under Risk Factors in our annual report on Form 10-K for the year ended September 30, 2007 and in our other reports filed from time to time with the Securities and Exchange Commission. These forward-looking statements reflect our current views with respect to future events and are subject to these and other risks, uncertainties and assumptions relating to our operations, results of operations, growth strategies and liquidity. All subsequent written and oral forward-looking statements attributable to us or persons acting on our behalf are expressly qualified in their entirety by this paragraph. We assume no obligation to update any such forward-looking statements.

Overview

We are the leading provider of onshore seismic data acquisition services in the lower 48 United States as measured by the number of active data acquisition crews. Substantially all of our revenues are derived from the seismic data acquisition services we provide to our clients, mainly domestic oil and gas companies. Demand for our services depends upon the level of spending by these oil and gas companies for exploration, production, development and field management activities, which depend, in part, on oil and natural gas prices. Significant fluctuations in domestic oil and natural gas exploration activities and commodity prices have affected the demand for our services and our results of operations in years past and continue to be the single most important factor affecting our business and results of operations.

Our return to profitability in fiscal 2004 after several years of losses was directly related to an increase in the level of exploration for domestic oil and natural gas reserves by the petroleum industry beginning in 2003. The increased level of exploration is a function of higher prices for oil and natural gas. As a result of the increase in domestic exploration spending, we have experienced an increased demand for our seismic data acquisition and processing services, particularly from entities seeking natural gas reserves. While the markets for oil and natural gas have historically been volatile and are likely to continue to be so in the future and we can make no assurances as to future levels of domestic exploration or commodity prices, we believe opportunities exist for us to enhance our market position by responding to our clients' continuing desire for higher resolution subsurface images. Because the majority of our current clients are focused on the exploration for and production of natural gas, a sustained significant decline in the price of natural gas would have an adverse effect on the demand for our services.

We continue to focus on increasing the revenues from and profitability of our existing crews by upgrading our recording capacity, expanding the channel count on existing crews, adding to our energy source fleet and utilizing related technologies. While our revenues are mainly affected by the level of client demand for our services, our revenues are also affected by the pricing for our services that we negotiate with our clients and the productivity of our data acquisition crews, including factors such as crew downtime related to inclement weather, delays in acquiring land access permits, or crew downtime related to other operational disruptions, such as work scheduling, crew travel time

to remote worksites, equipment failure or destruction. Consequently, our successful efforts to negotiate more favorable contract terms in our supplemental service agreements, to mitigate access permit delays and to improve overall crew productivity, may contribute to growth in our revenues. Although our clients may cancel their supplemental service

Table of Contents

agreements with us on short notice, we believe we currently have a sufficient order book to sustain operations at full capacity through the end of calendar year 2008 and on a number of crews well into calendar year 2009. During the third quarter of fiscal 2008, we fielded an additional crew, our sixteenth, by redeploying an existing I/O MRX recording system. This new crew is a smaller channel count crew initially committed to large scale 2D and small scale 3D seismic projects in the Appalachian Basin.

Highlights of the Quarter Ended June 30, 2008

Our financial performance from operations for the third quarter of fiscal 2008 significantly improved when compared to our financial performance for the third quarter of fiscal 2007. This improvement was the result of the addition of a new seismic data acquisition crew in September 2007, the replacement of an I/O MRX recording system with an ARAM ARIES recording system on an existing crew in April 2008, the redeployment of the I/O MRX recording system on a new crew in May 2008, increased channel count, and productivity on existing crews. This improvement was further supported by continuing demand for our seismic services, particularly by clients seeking natural gas reserves. The following are the highlights of our third quarter performance:

We operated sixteen data acquisition crews during the quarter, an increase of two crews from the same quarter in fiscal 2007;

We continued to make significant capital investments and capital improvements in order to enhance our data acquisition capabilities, including:

The replacement of an I/O MRX recording system with an ARAM ARIES recording system on an existing crew;

Fielding our sixteenth crew by redeploying an existing I/O MRX recording system;

Increasing total channel count to in excess of 115,000; and

Taking delivery of seven ION vibrator energy source units, bringing the Company's total to 143 units.

During the third fiscal quarter, we operated crews in West Texas, South Texas, East Texas, the Barnett Shale of the Fort Worth Basin, the Fayetteville Shale in Arkansas, the Rocky Mountains, New Mexico, Oklahoma, Louisiana, California, and the Appalachian Basin.

Results of Operations

Operating Revenues. Our operating revenues for the first nine months of fiscal 2008 increased 32% to \$240,530,000 from \$182,226,000 for the first nine months of fiscal 2007. For the three months ended June 30, 2008, operating revenues totaled \$84,568,000 as compared to \$68,637,000 for the same period of fiscal 2007, a 23% increase. Revenues in the third quarter of fiscal 2008 included third-party charges that were relatively unchanged from prior quarters of fiscal 2008. Third-party charges relate to the use of helicopter support services, specialized survey technologies, and dynamite energy sources. The sustained level of these charges is driven by our continued operations in areas with limited access in the Appalachian Basin, Arkansas, Val Verde Basin of Texas, and in Eastern Oklahoma. Revenue growth was primarily due to the factors described above in the Highlights of the Quarter Ended June 30, 2008.

Operating Costs. Operating expenses for the nine months ended June 30, 2008 totaled \$176,111,000 versus \$135,157,000 for the same period of fiscal 2007, an increase of 30%. Operating expenses for the three months ended June 30, 2008 increased 21% to \$60,457,000 as compared to \$49,825,000 for the same period of fiscal 2007. Increases in operating expenses are primarily due to the ongoing expenses of the two crews added in September 2007 and May 2008, the expenses of supporting equipment enhancements on the existing crews, and reimbursable expenses.

General and administrative expenses were approximately 2.2% of revenues in the first nine months of fiscal 2008, as compared to 2.5% of revenues in the same period of fiscal 2007. For the quarter ended June 30, 2008, general and administrative expenses were approximately 2.0% of revenues as compared to 2.2% for the comparable quarter of fiscal 2007. While the ratio of general and administrative expenses to revenue declined in fiscal 2008 related to the increase in revenues, the actual dollar amount increased. The increase of \$607,000 from the first nine months of fiscal

2007 to the first nine months of fiscal 2008 reflects ongoing expenses necessary to support expanded field operations.

Table of Contents

Depreciation for the nine months ended June 30, 2008 totaled \$17,722,000 as compared to \$12,853,000 for the nine months ended June 30, 2007. We recognized \$6,317,000 of depreciation expense in the third quarter of fiscal 2008 as compared to \$4,685,000 in the comparable quarter of fiscal 2007. The increase in depreciation expense in both the nine month and three month periods was the result of the significant capital expenditures we made during fiscal 2007 and to date in fiscal 2008. Our depreciation expense is expected to continue to increase during fiscal 2008 reflecting our significant capital expenditures in fiscal 2007 and our expected capital expenditures for the remainder of fiscal 2008.

Our total operating costs for the first nine months of fiscal 2008 were \$199,025,000, an increase of 30% from the first nine months of fiscal 2007. For the quarter ended June 30, 2008, our operating expenses were \$68,423,000 representing a 22% increase from the comparable quarter of fiscal 2007. These increases in the first nine months period and for the third quarter were primarily due to the factors described above.

Taxes. The effective rate for the income tax provision for the nine months ended June 30, 2008 and 2007 was 38.2% and 39.7%, respectively. The reduction in our overall effective tax rate is a result of reduced state taxes in the current year as compared to the prior year.

In July 2006, FASB issued FASB Interpretation No. 48 (FIN 48), Accounting for Uncertainty in Income Taxes an interpretation of FASB Statement No. 109, which became effective for us on October 1, 2007. FIN 48 prescribes a recognition threshold and a measurement attribute for the financial statement recognition and measurement of tax positions taken or expected to be taken in a tax return. For those benefits to be recognized, a tax position must be more likely than not to be sustained upon re-examination by taxing authorities. The amount recognized is measured as the largest amount of benefit that is greater than 50% likely of being realized upon ultimate settlement. As a result of the adoption of FIN 48, we recorded a liability of approximately \$207,000 which was accounted for as reduction to retained earnings as of October 1, 2007. The liability included \$137,000 in taxes and \$70,000 in penalties and interest. Our liability for unrecognized tax benefits as of June 30, 2008 was \$220,000.

Interest and penalty costs related to income taxes are classified as income tax expense. The tax years generally subject to future examination by tax authorities are for years ending September 30, 2004 and after. While it is expected that the amount of unrecognized tax benefits will change in the next twelve months, we do not expect any change to have a significant impact on our results of operations.

Liquidity and Capital Resources

Introduction. Our principal sources of cash are amounts earned from the seismic data acquisition services we provide to our clients. Our principal uses of cash are the amounts used to provide these services, including expenses related to our operations and acquiring new equipment. Accordingly, our cash position depends (as do our revenues) on the level of demand for our services. Historically, cash generated from our operations along with cash reserves and short-term borrowings from commercial banks has been sufficient to fund our working capital requirements, and to some extent, our capital expenditures.

Cash Flows. Net cash provided by operating activities was \$30,605,000 for the first nine months of fiscal 2008 and \$30,502,000 for the first nine months of fiscal 2007. Net cash flow provided by operating activities for the first nine months of fiscal 2008 reflects an increase in total revenues as discussed in Results of Operations. The increase in accounts receivable at June 30, 2008 as compared to the balance at September 30, 2007 reflects our increase in total revenues during fiscal 2008 as our collections of receivables have remained steady.

Net cash used in investing activities was \$47,796,000 in the nine months ended June 30, 2008 and \$38,099,000 in the nine months ended June 30, 2007. The net cash used in investing activities in both years primarily represents capital expenditures made with cash generated from operations.

Net cash provided by financing activities for the first nine months ended June 30, 2008 and 2007 was \$15,150,000 and \$1,120,000, respectively, and primarily reflects borrowings on our line of credit loan agreement in the period ended June 30, 2008. In July 2007, we borrowed \$5,000,000 from our line of credit. On March 21, 2008, we increased our borrowing to \$10,000,000, and on June 16, 2008, we increased our borrowing an additional \$10,000,000 for a total of \$20,000,000 at June 30, 2008. Net cash provided by

Table of Contents

financing activities also reflects proceeds from the exercise of stock options and the excess tax benefits from disqualifying dispositions in each period.

Capital Expenditures. Capital expenditures during the first nine months of fiscal 2008 were \$47,726,000. During the first quarter, we purchased an additional 5,000 channels of ARAM ARIES recording equipment and ten additional I/O vibrator energy source units. During the second quarter of our 2008 fiscal year, we replaced an I/O System II MRX recording system with an 8,000-channel ARAM ARIES recording system and took delivery of thirteen ION vibrator energy source units. In the third quarter, we sent our sixteenth crew to the field by redeploying an existing I/O MRX recording system and took delivery of the remaining seven of the twenty ION vibrator energy source units ordered in the second quarter of fiscal 2008, bringing our total to 143 units.

Our fiscal 2008 capital budget totals \$55,000,000, and we plan to use the unspent balance of the capital budget to increase channel count on existing crews, expand data processing capabilities, and to make technical improvements in all phases of our operations. We believe these expenditures will allow us to maintain our competitive position as we respond to our clients' desire for higher resolution subsurface images.

We continually strive to supply our clients with technologically advanced 3-D seismic data acquisition recording systems and data processing capabilities. We maintain equipment in and out of service in anticipation of increased future demand for our services.

Capital Resources. Historically, we have primarily relied on cash generated from operations, cash reserves and short-term borrowings from commercial banks to fund our working capital requirements and, to some extent, our capital expenditures. We have also funded our capital expenditures and other financing needs from time to time through public equity offerings.

Our revolving line of credit loan agreement is with Western National Bank. In January 2008, we renewed the agreement for an additional year, and on June 2, 2008, we amended the agreement to increase the borrowing limit to \$40.0 million. The agreement permits us to borrow, repay and reborrow, from time to time until June 2, 2009, up to \$40.0 million. Our obligations under this agreement are secured by a security interest in our accounts receivable, equipment and related collateral. Interest on the facility accrues at an annual rate equal to either the 30-day London Interbank Offered Rate (LIBOR), plus two and one-quarter percent or the Prime Rate, minus three-quarters percent as we direct monthly. Beginning July 1, 2008, the interest rate shall not be less than 4%. Interest on the outstanding amount under the loan agreement is payable monthly. The loan agreement contains customary covenants for credit facilities of this type, including limitations on disposition of assets, mergers and reorganizations. We are also obligated to meet certain financial covenants under the loan agreement, including maintaining specified ratios with respect to cash flow coverage, current assets and liabilities, and debt to tangible net worth. We were in compliance with all covenants as of June 30, 2008 and August 1, 2008. On July 5, 2007, we borrowed \$5.0 million under the prior credit loan agreement for working capital purposes. This amount was renewed and extended under the new loan agreement. On March 21, 2008, we borrowed an additional \$5.0 million, and on June 14, 2008, we borrowed an additional \$10.0 million, in each case, for working capital purposes.

On August 5, 2005, we filed a shelf registration statement with the Securities and Exchange Commission covering the periodic offer and sale of up to \$75.0 million in debt securities, preferred and common stock, and warrants. The registration statement allows us to sell securities, after the registration statement has been declared effective by the SEC, in one or more separate offerings with the size, price and terms to be determined at the time of sale. The terms of any securities offered would be described in a related prospectus to be filed separately with the SEC at the time of the offering. The filing of the shelf registration statement will enable us to act quickly as opportunities arise.

The following table summarizes payments due in specific periods related to our contractual obligations with initial terms exceeding one year as of June 30, 2008:

	Total	Payments Due by Period (\$000)			
		Within			After
		1 Year	1-3 Years	3-5 Years	5 Years
Operating lease obligations	\$1,723	\$491	\$946	\$286	\$

We believe that our capital resources and cash flow from operations are adequate to meet current operational needs. We believe we will be able to finance our fiscal 2008 capital requirements including the continued expansion of our capital equipment through cash flow from operations, through borrowings under our revolving line of credit and, if necessary, from capital markets offerings.

Table of Contents

However, the ability to satisfy our working capital requirements and to fund future capital requirements will depend principally upon our future operating performance, which is subject to the risks inherent in our business.

Off-Balance Sheet Arrangements

We have no off-balance sheet arrangements.

Critical Accounting Policies

The preparation of our financial statements in conformity with generally accepted accounting principles requires us to make certain assumptions and estimates that affect the reported amounts of assets and liabilities at the date of our financial statements and the reported amounts of revenues and expenses during the reporting period. Because of the use of assumptions and estimates inherent in the reporting process, actual results could differ from those estimates.

Revenue Recognition. Our services are provided under cancelable service contracts. These contracts are either turnkey or term agreements. Under both types of agreements, we recognize revenues when revenue is realizable and services are performed. Services are defined as the commencement of data acquisition or processing operations. Revenues are considered realizable when earned according to the terms of the service contracts. Under turnkey agreements, revenue is recognized on a per unit of data acquired rate, as services are performed. Under term agreements, revenue is recognized on a per unit of time worked rate, as services are performed. In the case of a cancelled service contract, we recognize revenue and bill our client for services performed up to the date of cancellation.

We also receive reimbursements for certain out-of-pocket expenses under the terms of our service contracts. We record amounts billed to clients in revenue at the gross amount, including out-of-pocket expenses that are reimbursed by the client.

In some instances, we bill clients in advance of the services performed. In those cases, we recognize the liability as deferred revenue.

Allowance for Doubtful Accounts. We prepare our allowance for doubtful accounts receivable based on our review of past-due accounts, our past experience of historical write-offs and our current customer base. The inherent volatility of the energy industry's business cycle can cause swift and unpredictable changes in the financial stability of our customers.

Impairment of Long-Lived Assets. We review long-lived assets for impairment when triggering events occur suggesting deterioration in the assets recoverability or fair value. Recognition of an impairment charge is required if future expected net cash flows are insufficient to recover the carrying value of the asset. Our forecast of future cash flows used to perform impairment analysis includes estimates of future revenues and future gross margins based on our historical results and analysis of future oil and gas prices which is fundamental in assessing demand for our services. If we are unable to achieve these cash flows, an impairment charge would be recorded.

Depreciable Lives of Property, Plant and Equipment. Our property, plant and equipment are capitalized at historical cost and depreciated over the useful life of the asset. Our estimation of this useful life is based on circumstances that exist in the seismic industry and information available at the time of the purchase of the asset. As circumstances change and new information becomes available, these estimates could change. We amortize these capitalized items using the straight-line method.

Tax Accounting. We account for our income taxes in accordance with SFAS No. 109, Accounting for Income Taxes, which requires the recognition of amounts of taxes payable or refundable for the current year and an asset and liability approach in recognizing the amount of deferred tax liabilities and assets for the future tax consequences of events that have been recognized in our financial statements or tax returns. We determine deferred taxes by identifying the types and amounts of existing temporary differences, measuring the total deferred tax asset or liability using the applicable tax rate and reducing the deferred tax asset by a valuation allowance if, based on available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized. Our methodology for recording income taxes requires judgment regarding assumptions and the use of estimates, including determining our annual effective tax rate and the valuation of deferred tax assets, which can create a variance between actual results and estimates and could have a material impact on our provision or benefit for income taxes.

Table of Contents

Stock-Based Compensation. We account for stock-based compensation awards in accordance with SFAS No. 123(R), *Share-Based Payment*. We measure all employee stock-based compensation awards using the fair value method and recognize compensation cost in our financial statements. We record compensation expense as operating or general and administrative expense as appropriate in the Statements of Operations on a straight-line basis over the vesting period of the stock award.

Recently Issued Accounting Pronouncements

In September 2006, the FASB issued SFAS No. 157 (*SFAS 157*), *Fair Value Measurements*. SFAS 157 clarifies that fair value is the amount that would be exchanged to sell an asset or transfer a liability in an orderly transaction between market participants. Further, the standard establishes a framework for measuring fair value in generally accepted accounting principles and expands certain disclosures about fair value measurements. SFAS 157 is effective for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. In December 2007, the FASB provided a one-year deferral of SFAS 157 for non-financial assets and non-financial liabilities, except those that are recognized or disclosed at fair value on a recurring basis, at least annually. We do not expect the adoption of either part of SFAS 157 to have a material impact on our financial statements.

In February 2007, the FASB issued SFAS No. 159 (*SFAS 159*), *The Fair Value Option for Financial Assets and Financial Liability*. SFAS 159 provides companies with an option to report selected financial assets and liabilities at fair value. SFAS 159 is effective for fiscal years beginning after November 15, 2007. We are evaluating the impact of SFAS 159 on our financial statements.

In May 2008, the FASB issued SFAS No. 162 (*SFAS 162*), *The Hierarchy of Generally Accepted Accounting Principles*. Under SFAS 162, the GAAP hierarchy will now reside in the accounting literature established by the FASB. SFAS 162 identifies the sources of accounting principles and the framework for selecting the principles used in the preparation of financial statements in conformity with GAAP. SFAS 162 is effective 60 days following the SEC's approval of the Public Accounting Oversight Board Auditing amendments to AU Section 411, *The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles*. We do not expect the adoption of SFAS 162 to have a material impact on our financial statements.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our primary sources of market risk include fluctuations in commodity prices which affect demand for and pricing of our services and interest rate fluctuations. As of June 14, 2008, we had borrowed \$20.0 million under our revolving line of credit loan agreement with Western National Bank. Through January 18, 2008, interest payable under the revolving line of credit was variable based upon the then current prime rate. Beginning on January 19, 2008, interest on the outstanding amount under the line of credit loan agreement is payable monthly at an annual rate equal to either the 30-day London Interbank Offered Rate (*LIBOR*), plus two and one-quarter percent or the Prime Rate, minus three-quarters percent at our direction. Beginning July 1, 2008, interest rate on the outstanding amount under the line of credit loan agreement will not be less than 4%.

At June 30, 2008, we did not have any short-term investments. We have not entered into any hedge arrangements, commodity swap agreements, commodity futures, options or other derivative financial instruments. We do not currently conduct business internationally, so we are not generally subject to foreign currency exchange rate risk.

ITEM 4. CONTROLS AND PROCEDURES

Management's Evaluation of Disclosure Controls and Procedures. We carried out an evaluation, under the supervision and with the participation of our management, including our principal executive and principal financial officers, of the effectiveness of our disclosure controls and procedures pursuant to Rule 13a-15 under the Securities Exchange Act of 1934 as of the end of the period covered by this quarterly report. Based upon that evaluation, our President and Chief Executive Officer and our Executive Vice President, Secretary and Chief Financial Officer concluded that, as of June 30, 2008, our disclosure controls and procedures were effective, in all material respects, with regard to the recording, processing, summarizing and reporting, within the time periods specified in the SEC's rules and forms, for information required to be disclosed by us in the reports that we file or submit under the Exchange Act. Our disclosure controls and procedures include controls and procedures designed to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is accumulated and communicated to our management, including our President and Chief Executive Officer and our Executive Vice

President, Secretary and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure.

Table of Contents

Changes in Internal Control Over Financial Reporting. There have not been any changes in our internal controls over financial reporting (as defined in Rule 13a-15(f) of the Securities Exchange Act of 1934) during the quarter ended June 30, 2008 that have materially affected or are reasonably likely to materially affect our internal control over financial reporting.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

From time to time, we are a party to various legal proceedings arising in the ordinary course of business. Although we cannot predict the outcomes of any such legal proceedings, our management believes that the resolution of pending legal actions will not have a material adverse effect on our financial condition, results of operations or liquidity.

On March 14, 2008, a wildfire in West Texas burned a remote area in which one of our data acquisition crews was operating. The fire destroyed approximately \$3.8 million net book value of our equipment, all of which was covered by our liability insurance, net of our deductible. In addition to the loss of equipment, a number of landowners in the fire area suffered damage to their grazing lands, livestock, fences and other improvements. We continue discussions with the landowners regarding these losses. We currently estimate the likely amount of the landowners damages will be less than \$1.5 million. We believe any damages we pay will be covered by our liability insurance.

ITEM 1A. RISK FACTORS

In addition to the other information set forth in this Form 10-Q, you should carefully consider the risk factors discussed in Part I, Item 1A. Risk Factors in our Annual Report on Form 10-K for the fiscal year ended September 30, 2007, which could materially affect our financial condition or results of operations. There have been no material changes in our risk factors from those disclosed in our 2007 Annual Report on Form 10-K.

ITEM 6. EXHIBITS

The information required by this Item 6 is set forth in the Index to Exhibits accompanying this Form 10-Q and is hereby incorporated by reference.
